AMERICAN STATE PAPERS.

MILITARY AFFAIRS.

22D CONGRESS.]

No. 519.

[1ST SESSION.]

ANNUAL STATEMENT OF THE EXPENDITURES AT, AND ARMS MADE IN, THE NATIONAL ARMORIES IN 1831.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 15, 1832.

DEPARTMENT OF WAR, *March 10, 1832.*

SIR: In pursuance of an act of Congress of the 2d of April, 1794, concerning arsenals and armories, I have the honor to transmit herewith a statement of the expenditures of the United States armories, and of the arms, &c., manufactured therein during the year 1831.

I have the honor to be, very respectfully, your obedient servant,

LEWIS CASS.

HON. ANDREW STEVENSON, *Speaker of the House of Representatives.*

Statement of the expenditures made at the national armories, and of the arms, &c., manufactured therein, during the year 1831.

	Expenditures.					Arms, &c., manufactured.								
	For lands, buildings, canals, repairs, and other permanent improvements.	For the manufacture of arms.	For the manufacture of Hall's rifles.	For miscellaneous purposes, not embraced in the foregoing. GEORGE BOMFORD, *Brevet Colonel, on Ordnance service.*

ORDNANCE OFFICE, *Washington, March 8, 1832.*

22D CONGRESS.]

No. 520.

[1ST SESSION.]

STATEMENTS OF THE OFFICERS, ARSENALS, AND DEPOTS UNDER THE DIRECTION OF
THE ORDNANCE DEPARTMENT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 19, 1832.

Statements from the Ordnance department in relation to the number of officers, arsenals, and depots belonging to that department.

ORDNANCE OFFICE, *Washington, March 19, 1832.*

SIR: In answer to the resolutions of the House of Representatives of the 15th instant, referred to this department, I have the honor to enclose herewith two statements, marked A and B, embracing part of the information called for by the resolution.

In regard to such part of this information as is not therein referred to, I beg leave to state, in answer to so much of the second resolve as directs the Secretary of War "to state the number and rank of the commissioned officers and other agents which, in his opinion, the public service requires, and no more, to be stationed at each of the public arsenals," that the public service of this department requires the following officers, viz: one colonel, one lieutenant colonel, two majors, ten captains, eighteen lieutenants, and five storekeepers; making a total of thirty-seven commissioned officers and storekeepers.

In reference to so much of the second resolve as directs the Secretary of War to report "whether, in his opinion, there be any arsenals which might not, consistently with the public good, be abandoned or transferred to the State in which it is located," I beg leave to remark that, as public business is necessarily transacted at all the United States arsenals and depots, either in the repairs of arms, the preparation and delivery of supplies of ordnance stores to the army and the militia, or in the construction of gun-carriages and the manufacture of all the implements and machines of artillery; the abandonment, therefore, of any of these arsenals, or their transfer to the State wherein they are located, is considered by this department as a measure which would be injurious to the public service.

I have the honor to be, sir, respectfully, your obedient servant,

G. BOMFORD, *Brevet Colonel, on Ordnance service.*

HON. LEWIS CASS, *Secretary of War.*

Statement in answer to the first resolve of the Hon. Mr. Williams, of March 15, 1832.

Number of officers on duty in the Ordnance department, December 31, 1831.	Rank.					Regiment of artillery.	Period of service in the Ordnance department up to Dec. 31, 1831.	Particular duties they severally performed on December 31, 1831.
	Lieutenant colonel.	Majors.	Captains.	First lieutenants.	Second lieutenants.

REMARKS.

The arsenals at Watervliet, Washington, and Pittsburg, are considered the most important. In these the construction of field artillery carriages, both for the army and militia of the United States, is carried on to a considerable extent, as also the repairing and preservation of small arms and military stores, and the fabrication of all kinds of ammunition designed for the use of the army and the fortifications.

At the arsenals at Augusta, Me., Watertown, Frankford, Richmond, Augusta, Ga., Mount Vernon, Ala., Baton Rouge, and St. Louis, the repairing of small arms, the fabrication of ammunition, and the preservation of military stores, are carried on to a considerable extent; also the supply of all military stores to the militia of the United States, under act of 1808.

Vergennes, Vt., Rome, N. Y., Detroit, Pikesville, and Charleston.—These arsenals are considered as minor depots, and are used for the depositing of the military stores to be distributed to the army and militia of the United States.

At Fort Monroe the construction of gun-carriages for that work is carried on equal in extent to the available means of the appropriation allotted for its armament.

At Galena, Ill., an officer is engaged in the superintendence of the lead mines, in collecting and receiving the amount of rents, and transporting and distributing the lead to the several arsenals and depots under the control of this department.

[1ST SESSION.]

PRICES OF MATERIALS AND WORKMANSHIP AT FORT HAMILTON, NEW YORK, AND
FORT ADAMS, AT NEWPORT, RHODE ISLAND, IN 1828-'29-'30.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 23, 1832.

DEPARTMENT OF WAR, *March 22, 1832.*

SIR: In compliance with a resolution of the House of Representatives of the 15th instant, I have the honor to enclose a report of General Gratiot, chief engineer, containing "the prices paid during the years 1828, 1829, and 1830, by the superintendent of Fort Hamilton, in the harbor of New York, for lumber, stone, lime, brick, and labor, purchased and employed in the erection of said fort; and also the prices paid the same years by the superintendent of Fort Adams, in the harbor of Newport, Rhode Island, for the same articles, and the labor employed in the erection of Fort Adams."

I have the honor to be, very respectfully, your obedient servant,

LEW. CASS.

HON. ANDREW STEVENSON, *Speaker of the House of Representatives.*ENGINEER DEPARTMENT, *Washington, March 20, 1832.*

SIR: The accompanying statement furnishes the information relative to prices of materials and workmanship at Forts Adams and Hamilton, which is required by a resolution of the House of Representatives of the 15th instant.

Respectfully, sir, your obedient servant,

C. GRATIOT, *Brigadier General.*HON. LEWIS CASS, *Secretary of War.*

A statement of the average prices paid for certain materials and workmanship at Fort Adams, Rhode Island, and Fort Hamilton, New York, in the years 1828, 1829, and 1830, taken from the annual statements of the superintending engineers.

Designation.	Fort Adams.				Fort Hamilton.				Remarks.
	1828.	1829.	1830.	Average for three years.	1828.	1829.	1830.	Average for three years.	
Stone, per perch.....	\$2 71	\$2 54	\$2 12	\$2 45½	\$2 74½	\$2 43½	\$2 46½	\$2 55	
Bricks, per M.....	8 28	7 30	6 39	7 39	7 33	7 35½	7 21	7 30	
Hydraulic cement, per cask....	3 30	2 73	2 57	2 86½	2 74	2 40	2 46	2 53½	
Lime, per cask.....	1 35½	1 26	1 01½	1 21	1 22	1 08	1 02	1 10½	
Scantling, pine, per M. feet....	15 00	10 00	11 00	12 00	14 53	23 48	18 50½	The difference in the price of this article at the two places is attributable to a difference of quality.
Timber, oak, per cubic foot ...	25	10½	17½	12½	16	13½	13½	Purchased in very small quantities.
Masons' wages per day.....	1 56½	1 52	1 78½	1 62½	1 63	1 40	1 47	1 50	
Carpenters' wages per day....	2 00	2 00	1 56	1 85½	1 76	1 76	1 52	1 68	
Smiths' wages per day.....	95	1 02½	1 09	1 02	1 45	1 48	1 49	1 47½

No. 523.

[1ST SESSION

ON THE APPLICATION OF THE CORPORATION OF SAVANNAH, IN GEORGIA, FOR THE ERECTION OF BARRACKS AND LOCATION OF REGULAR TROOPS IN THAT CITY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 22, 1832.

Mr. DRAYTON, from the Committee on Military Affairs, to whom was referred the memorial of the mayor and aldermen of the city of Savannah, relating to the expediency of erecting barracks in that city for the United States troops who are stationed in its vicinity, reported :

That they have had communications with the War Department upon the subject of the above memorial, as will be seen upon an inspection of the papers herewith filed, marked A, B, and C, from the tenor of which they are of opinion that it would be inexpedient, at this time, to authorize the erection of barracks in the city of Savannah. They therefore submit to the House the following resolution:

Resolved, That the committee be discharged from the further consideration of the memorial of the mayor and aldermen of the city of Savannah.

To the honorable the Senate and House of Representatives of the United States in Congress assembled :

The memorial of the mayor and aldermen of the city of Savannah respectfully sheweth: That it has been the practice of late years to remove the United States troops from cantonment Oglethorpe, near Savannah, to a distant post for several months in summer. Your memorialists are informed, and have reason to believe, that this course has been pursued solely in consequence of the extreme unhealthiness of that situation; and the permanent location of United States troops among them being of importance to the community they represent, they respectfully invite the attention of Congress to this subject. Your memorialists do not ask for the continuance of the troops at the post they now occupy to the imminent hazard of their lives, but they would with due deference submit to the consideration of Congress the expediency and necessity of forming another military establishment, to be located in this city. For years past Savannah has been favored with as much health as most of our Atlantic cities, and has been exempt from any malignant disease; and the professional gentlemen who have been consulted on the occasion are decided in the opinion that, under proper restrictions, the troops might enjoy a good degree of health in a position within its limits. An eligible site for barracks could be obtained at a fair valuation; and your memorialists respectfully and earnestly solicit your honorable bodies to authorize the purchase of ground, and the erection of buildings of durable materials, within the city of Savannah, sufficient for the accommodation of at least one hundred men, in order that this community might be benefitted by the residence of United States troops among them, and particularly at a time when, from the periodical emigration of many of our white population, a military force is most needed. And your memorialists will ever pray.

WM. R. WARING, *Mayor.*

DEPARTMENT OF WAR, *March 23, 1832.*

SIR: I have the honor to transmit a letter from Major General Macomb, which contains the views of this department in relation to the subject referred to in your letter of the 4th instant.

With great respect, I am, sir, your obedient servant,

LEW. CASS.

HON. WILLIAM DRAYTON, *Chairman of the Military Committee, House of Representatives.*

HEADQUARTERS OF THE ARMY, *Washington, March 19, 1832.*

SIR: In pursuance of your directions to report as to the expediency of abandoning the barracks lately built near Savannah, and erecting new quarters within the city, as proposed by the mayor and aldermen, as set forth in their memorial addressed to Congress and transmitted to you by the honorable chairman of the Military Committee of the House of Representatives in his letter of the 4th instant, I have to state

that, although some years since the present position of the quarters of the troops stationed near Savannah for the protection of that city was visited with disease, it is possible that, owing to the newness of the station, or to some accidental cause which might not occur again, the unhealthiness may be attributed, as well as to the fact that the troops were unaccustomed to the climate. As the erection of the barracks in the city would be attended with great expense, and as it is doubtful whether, taking all things into consideration, the troops would enjoy better health in the city than in their present position, I would respectfully recommend that they continue to occupy the barracks in which they are now quartered, with a view of ascertaining whether there be any improvement in the salubrity of the position; but should it turn out to be sickly the commanding officer may be authorized to hire quarters in the city in case there should appear among the troops any disease of a character to render the removal to the city proper, or quarters in the city might be hired immediately and the troops stationed in them. Then should the city, after a year or more experience, prove to be more healthy than the present barracks, a suitable lot might be purchased and permanent barracks built.

I am, sir, your obedient servant,

A. MACOMB, *Major General.*

Hon. SECRETARY OF WAR.

QUARTERMASTER GENERAL'S OFFICE, *March 14, 1832.*

SIR: I return you the letter of the honorable Mr. Drayton, chairman of the Military Committee of the House of Representatives, covering a memorial from the city council of Savannah, Georgia, praying for purchase of a site and the erection of permanent barracks at that place, and have the honor to state, in reply to the inquiry as to the cost of complying with the request, that the expense of erecting barracks and quarters for the accommodation of two companies would be about fifty thousand dollars. With respect to the cost of the necessary ground I have no means of forming an estimate. The memorial represents that an eligible site could be obtained at a fair valuation, but what that would be it is impossible at this time to say.

I am, sir, very respectfully, your obedient servant,

TH. S. JESUP, *Quartermaster General.*

Hon. LEWIS CASS, *Secretary of War.*

22D CONGRESS.]

No. 524.

[1ST SESSION.]

ON THE CLAIMS OF OFFICERS OF THE ARMY FOR EXPENSES INCURRED IN DEFENDING SUITS FOR ACTS DONE IN THE PERFORMANCE OF THEIR OFFICIAL DUTIES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 9, 1832.

Mr. E. WHITTLESEY, from the Committee of Claims, to whom was referred the bill from the Senate for the relief of Major [Lieutenant Colonel] David E. Twiggs, Joseph M. Street, and Stephen W. Kearney, reported:

That the first section of the bill provides "that for defraying the expenses incurred by Major David E. Twiggs in defending suits brought against him for certain acts done in performance of his official duties, and in obedience to orders from the President of the United States, one thousand and eighty-six dollars and fifty cents be, and hereby is, appropriated to be paid out of any money in the Treasury not otherwise appropriated."

Six different accounts are presented, whose aggregate amount is that contained in this section of the bill. The first is an account stated by Joseph W. Torney, in which he charges Major Twiggs for attending two terms of the court at Green Bay, in the Territory of Michigan, retaining fees in two suits instituted by one Whiting, and for arguing a demurrer, and one of the suits before a jury, and his expenses, the sum of \$250.

There is no evidence before the committee that any part of this account has been paid, and the payment is in no way acknowledged by Mr Torney.

The second account is for attorney's fees in one of the suits, charged by Henry S. Beard, amounting to \$100.

This account is received in full by Mr. Beard, but is unaccompanied by any affidavit that the money was paid.

The third account is in favor of P. B. Grignor, amounting to \$5 75, and is for postage paid, expense of copies of pleadings, certificates, and seals.

Mr. Torney certifies the services were rendered at his request.

The fourth account amounts to \$2 75, and is an omission in the preceding account.

Neither of the two last accounts is received, nor is there any evidence of either having been paid.

The fifth account is in favor of Henry S. Beard for postage, amounting to \$2, and is received.

The sixth account is as follows:

The United States to Lieutenant Colonel D. E. Twiggs, Dr.

Expenses and transportation of Lieutenant Colonel D. E. Twiggs, 4th infantry, in attending the district court in Brown county, Michigan Territory, in June, 1829.....	\$198 00
Expenses and transportation of Lieutenant Colonel D. E. Twiggs, 4th infantry, in attending the district court in Brown county, Michigan Territory, (from Augusta, Georgia,) in June, 1830.....	330 00
Expenses and transportation of Lieutenant Colonel D. E. Twiggs in attending the district court in Brown county, Michigan Territory, in June, 1831.....	198 00
	726 00

The six accounts, as stated above, amount to \$1, 086 50.

It is due to the House to state (from the conclusion to which this committee has arrived) that it is understood the claim was favorably recommended to the attention of the Committee of Ways and Means by the War Department; that provision was made by that committee, in a general appropriation bill, for paying the account, which received the sanction of this House; that the Committee on Finance in the Senate struck it out of the general appropriation bill, and reported the bill now under consideration, which, having passed the Senate, was committed to the Committee of Claims.

It is with reluctance this committee feels itself bound to dissent from those who have heretofore examined this claim, and a careful and vigilant examination is asked in its behalf, with the most entire confidence, if this committee has erred, that the error will be discovered by the House and corrected.

Where an officer in the line of his duty, or in obedience to orders from a superior officer, has committed a trespass, (not wantonly,) and judgment has been recovered against him, after a full defence conducted in good faith, or where he has incurred cost in making such defence, there are many precedents where officers, both in the land and naval service, have been saved harmless. The amount of damages recovered by a judgment, where the cause has been carried to the court of dernier resort, and has been defended in good faith, is not the subject of investigation, for a very clear and obvious reason that, however exorbitant the damages may be, a trial having been had, the officer is bound to pay them, and Congress cannot sit as a court of errors, and review and reverse the judgment. But all costs and expenses not included within the judgment are as properly the subject of investigation as any other claim that can be presented. In the suits mentioned, the plaintiff was nonsuited; of course no judgment was recovered against the defendant. If the money has been paid to discharge the first five accounts, it is within the power of Colonel Twiggs to prove it. Some exception might be taken as to the reasonableness of the attorney's fees, but this is waived for the present, as there is no evidence as to a part of the accounts, and as to the other accounts the evidence is not satisfactory that any part of them have been paid. These accounts are admissible, if Colonel Twiggs shall prove he has paid them, the reasonableness of them to be decided by the committee and Congress, provided the case on investigation shall appear to be one where Colonel Twiggs was acting in the line of his duty, or under the order of a superior officer.

The account for expenses and transportation for attending three terms of the court, amounting to seven hundred and twenty-six dollars, appeared to the committee to be a very high charge, and one that required to be fully investigated. The committee know of no allowances made to officers for transportation of baggage while attending court to defend suits commenced against them for violating private rights. It is not believed, in this case, that any expense was incurred in transporting baggage, and it is not perceived that any such transportation was necessary. The greatest allowance, under any circumstances, that should be made to officers who are sued for their official acts, is the amount actually and necessarily expended; otherwise, an inducement, too strong to resist by some, would be held out to them to commit depredations, as a source from whence they would derive lucrative perquisites. No stronger case need be put to illustrate this position than the one now before the committee. A letter was addressed to Adjutant General Jones, requesting him to state where Major [Lieutenant Colonel] D. E. Twiggs was stationed from March, 1829, to the 1st of July, 1831. These dates were fixed on because the first suit was commenced in March, 1829, and both of them were ended in June term, 1831. The second suit was commenced at June term, 1831, and was discontinued or dismissed without any pleadings having been filed. The answer of Adjutant General Jones, dated March 29, 1832, is referred to, and made a part of this report.

It appears that Lieutenant Colonel Twiggs was present commanding Fort Winnebago, from March to July, 1829; that he was then absent on furlough until the 24th of June, 1830, when he returned to his station, Fort Winnebago, and continued on duty there until the 23d of June, 1831.

This communication from Adjutant General Jones was accompanied by the copy of a special order from General Macomb, extending the furlough of Colonel Twiggs "until the adjournment of the district court at Green Bay, some time in the month of June next, when he will join his proper station." This special order is dated on the 2d of February, 1830.

The committee having obtained information that Lieutenant Colonel Twiggs had been absent on furlough, within the time which was the subject of the inquiry, and that the furlough had been extended, another letter was addressed to Adjutant General Jones, requesting him to furnish the committee with the letters that had passed between Lieutenant Colonel Twiggs and the officers with whom he had corresponded on the subject of his furlough, and the extension of it. This request was complied with, and the committee will refer to the letters of Lieutenant Colonel Twiggs, dated May 23, 1829, to General Atkinson, soliciting a furlough from the following October through the winter, that he might be present in January, when an estate of considerable amount was to be divided, of which he was one of the heirs. He presented this further consideration, that he might, by his personal attendance at Washington, induce the payment of the costs at Green Bay. It appears from the copy of the furlough, also furnished by General Jones, that Lieutenant Colonel Twiggs was permitted to be absent from his station for six months, commencing at his departure from Fort Winnebago in October. Lieutenant Colonel Twiggs wrote to Adjutant General Jones from Augusta, Georgia, on the 18th of January, 1830, stating that his furlough would expire in March; that the navigation of the lake would not probably be open until April; that he was obliged to attend the session of the district court at Green Bay, in June; and he requested that his furlough might be extended until after the adjournment of the court. It was in consequence of this application that the special order of February 2, 1830, was issued, extending the furlough as requested, and as has been heretofore noticed. By recurring to the account, as stated above, it will be seen that,

for returning from Augusta, Georgia, to Green Bay, to attend the trial of his cause, Lieutenant Colonel Twiggs has charged, under the head of expenses and transportation, the sum of three hundred and thirty dollars. Green Bay is directly on the route to Fort Winnebago, by way of the lake through which he contemplated to pass, as appears from his letter to Colonel Jones, of January 18. After recapitulating the different items of the account, he annexes the following certificate: "The above account is correct and just. D. E. Twiggs, lieutenant colonel 4th infantry." If an account is correct and just, containing in it a charge for expenses and transportation under the pretence that he attended the session of the court at Green Bay from Augusta, Georgia; whereas, in truth, he was returning to his post at Fort Winnebago, from which he had been absent on furlough, at his own solicitation, the committee suppose the account would have been equally correct and just if he had gone to Europe, or any other part of the world, and had charged expenses and transportation: from thence to Green Bay. This item is wholly inadmissible, and, from its extraordinary character, casts a suspicion over the whole account. The committee will not, at present, examine the question whether the official acts of Lieutenant Colonel Twiggs were such as to impose on the United States the obligation of saving him harmless from the costs incurred, as he does not satisfactorily prove that he has paid any of the accounts presented. The committee recommend that said bill be amended by striking out the first section, saving the enacting clause.

The second section of said bill provides "That the sum of one thousand three hundred and seventy-four dollars seventy eight and three-fourths cents be, and the same is hereby, appropriated, for discharging, under the direction of the Secretary of War, a judgment rendered against Joseph M. Street and Stephen W. Kearney, at the October term of the United States circuit court for the counties of Crawford and Iowa, in the Michigan Territory, for and on account of a procedure in discharge of their official duties."

It appears from an authenticated transcript, signed by the clerk of the United States circuit court for the counties of Crawford and Iowa, Michigan Territory, that, at the October term, 1831, Jean Brunett recovered a judgment against Joseph M. Street and Stephen W. Kearney, for his damages, to the amount of \$1,200, and for his costs, both amounting to \$1,373 56½. There was another suit between the same parties, in which no decision was made, but in which costs were taxed against the defendants to the amount of \$1 22½, which, added to the sum last mentioned, amounts to the sum contained in the second section of the bill above recited. A copy of the record has not been presented to the committee. Understanding that the cause was tried before Judge Doty, and that he was in the city, the committee requested him to state the facts as they appeared before him on the trial. A summary of the evidence taken down by him on the trial, together with the points of law involved in the case, with the opinion of the court thereon, have been furnished, and to which the committee refer. The suit was brought to recover damages for a trespass and false imprisonment committed by the defendants on the body of the plaintiff.

It is stated, in a report made by Governor Clark to the Secretary of War, dated February 25, 1832, that Mr. Street was Indian agent at Prairie du Chien, under whose directions Major Kearney, an officer of the army, acted in giving orders to arrest a party of men who were with said Brunett, a foreigner, on their way into the Indian country, in violation of the intercourse act of 1802 and of 1816.

Governor Clark supposes the judge decided that inasmuch as Brunett and his party were on an island in the Mississippi river, which river was a public highway, they could not be arrested. Judge Doty states that this was adverted to in the argument, but it appears, from his statement, that it was not the point decided.

He held that the defendants, in order to make out their justification, should produce an order from the President, as the authority to remove intruders from the Indian lands was specially delegated to him, and not vested in an Indian agent, nor in an officer of the army. Judge Doty further says the defendants did not produce any order from the President in support of their justification under the act of 1816, nor did they produce any evidence that Brunett was a foreigner.

It does not appear, from any of the papers before the committee, that the President or Secretary of War gave any orders for removing intruders from the Indian lands in that section of the country to which Jean Brunett and his party were bound; nor that they, or either of them, gave any orders for the arrest of said Brunett. And no such order having been produced on the trial, is evidence of a very satisfactory character that no order of the kind was given.

There is among the papers the copy of a letter of the following tenor:

"DEPARTMENT OF WAR, *Office of Indian Affairs*, March 26, 1829.

"SIR: I transmit herewith, by direction of the Secretary of War, a copy of a letter from Major Twiggs, giving information of a trespass about to be committed on the Indian lands by the cutting and carrying off timber therefrom, and call your attention to the subject, that the trespass referred to may be prevented.

"THOS. L. MCKENNEY.

"General WILLIAM CLARK, *Indian Office*."

On comparing dates, it is very satisfactorily ascertained that the arrest of Brunett was before the date of the letter above recited. James M Street, on the 2d of March, 1829, in a letter addressed to Major Twiggs, says: "The decisive course adopted by myself and Major Kearney, I believe, has effectually stopped timber parties in this quarter." The committee suppose this has reference to the arrest of Brunett. In this conclusion they are confirmed by the report made by Governor Clark to the Secretary of War of this transaction, on the 25th of February, 1832, in which he speaks of the arrest of Brunett to have been in March, 1829. The committee will make another extract from the letter of Mr. Street to Major Twiggs, for the purpose of drawing the attention of Congress to an instance where the civil authority has been put down and set at defiance by military power, at a distant post, from a belief that it has a bearing on the case now under examination. He proceeds to say: "A few days past a large quantity of walnut plank was seized by me and delivered into the care of Major K. Mr. Lockwood, from Galena, came up; the timber has been claimed, and an attempt to replevy it out of the possession of Major K. The sheriff was *guilty*, (*quietly*, as he has mentioned in another letter referring to the same transaction,) walked out of the fort, and no attention paid to his writ. Thus it will remain until the will of the government is known."

The 6th section of the act of April 29, 1816, vol. 6, page 145, under which act the defendants are justified, is as follows: "That the President of the United States be, and he hereby is, authorized to use the military force of the United States whenever it may be necessary to carry into effect this act as far as it relates to seizure of goods to be sold to, or articles already purchased from the Indians, or to the arrest of persons charged with violating its provisions." It is very clear, from this section, that Congress has delegated

the power to arrest, by military force, those who are charged with violating the provisions of that act with very great caution. The President was thought to be the *only* person to whom this power might be safely delegated. There is no doubt much mischief may be and has been occasioned by the intrusion of the whites upon the Indian lands; and to guard against the consequences that might follow from a violation of the act of March, 1802, and April, 1816, there may be instances where the Indian agent, or an officer of the army, may justify himself to the government in proceeding to remove intruders; but the assumption of this power should at all times be watched with jealousy by Congress for the security of the people; and, when wantonly assumed, the offending agent, or officer, should be subjected to the payment of such damages as the civil tribunal may award against him, without any hope or prospect that he will obtain relief by applying to Congress.

The case now before the committee is not free from doubt. It is very apparent that Brunett was going into the Indian country with a party of men to cut timber, and that he was not acting under any license or permit even to trade with the Indians. Governor Clark, in his report of the circumstances attending the arrest, says: "Mr. Brunett was known not only to be an *alien*, but had left Prairie du Chien with his party in the night without asking for a license or permission from any one." This circumstance would naturally awaken suspicion in the minds of the Indian agent and of the officer commanding in that quarter. Indian hostilities had not existed long previous, and had brought with them the usual distress and massacres attending a savage and border warfare. To avert future collisions between the Indians and the frontier settlers was proper and commendable. The committee, in the absence of proof to the contrary, believe that Major Kearney and Mr. Street supposed the movements of Brunett would endanger the peace of the frontiers, and that it was necessary to remove him before the order of the President could be received. It does not appear that he was treated with any unnecessary rigor. He was arrested, as appears from Judge Doty's statement, on the evening of the 3d, and detained in custody until the 5th, when he was delivered over to the civil authority.

It is stated in the report made by Governor Clark, and heretofore referred to, that a bill of exception was filed to the opinion of the judge as to the points of law decided in the case.

It is evident, from the remarks made by Governor Clark, that he was not correctly informed as to the points of law decided by the court. The only questions of law involved, as appears from the statement of Judge Doty, were, 1st, whether, under the act of April, 1816, the defendants should show that they acted under an order from the President to make out their justification? The court decided that they must. 2d, whether, when power is given by a statute to the military to arrest a citizen, it deprives him of his constitutional right to have a warrant previously issued upon probable cause, supported by oath or affirmation? The court decided this question in the negative. The committee think both points were decided correctly. The last might admit of some qualification. If there were reasonable grounds to apprehend that the judgment would be reversed, and no further proceedings had in the case, the granting of relief might with propriety be suspended. Entertaining a different opinion, the committee cannot see any good reasons for accumulating costs in bringing the cause before the Supreme Court. After weighing all the evidence, and duly considering all the circumstances connected with the transaction, the committee recommend that relief be granted to Joseph M. Street and to Stephen W. Kearney, as contemplated by the second section of said bill.

[1st SESSION.]

MODE OF ACQUIRING TITLE TO THE LAND ON WHICH THE BARRACKS AT PRAIRIE DU CHIEN STANDS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 13, 1832.

QUARTERMASTER GENERAL'S OFFICE, *Washington City, March 31, 1832.*

SIR: In compliance with your instructions of yesterday, I have the honor to report that Judge Doty did grant to the United States a part of the lot of ground on which the new barracks have been erected at Prairie du Chien, which, it appears, he had previously conveyed to the county of Crawford as a site for a court-house and other public buildings for the county.

Old Fort Crawford, but a short distance from the new barracks, has been abandoned, and is no longer of any value as a military site. Perhaps the best use that could be made of it would be to transfer it to the county of Crawford for county purposes, on the condition that the acceptance of it be considered as a surrender by the county of all claim to the site of the new barracks. It is extremely probable that the county would, in a suit in equity, recover the ground, with the buildings on it, which have been erected at an expense of many thousand dollars.

I return the letter of the honorable Mr. Hunt, with the petition of the citizens of Prairie du Chien; and

I am, sir, respectfully, your obedient servant,

TH. S. JESUP, *Quartermaster General.*

Hon. LEWIS CASS, *Secretary of War, Washington City.*

No. 526.

[1ST SESSION.]

APPLICATION OF MARYLAND FOR THE INCREASE OF THE TOPOGRAPHICAL ENGINEERS,
FOR AN EFFICIENT ORGANIZATION OF THE ORDNANCE DEPARTMENT, FOR THE
ERECTION OF FORTIFICATIONS, AND THE ESTABLISHMENT OF A NATIONAL FOUNDRY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 13, 1832.

By THE SENATE, *March 5, 1832.*

Whereas it is the admonition of the Father of his Country "that we should in peace prepare for war," remembering that timely disbursements to "prepare for danger frequently prevent much greater disbursements to repel it;" and whereas, in his message to Congress, he declared it advisable to provide and lay up materials of war, in proportion as our resources should render it practicable, without inconvenience, so that in future wars we might not be found destitute of every necessary means of defence; and, in pursuance of these views, he recommended the establishment of national works for manufacturing such articles as were necessary for the defence of the country; and whereas the experience of the late war fully demonstrated the wisdom of that policy which his solicitude for our welfare recommended, and the loss of blood and treasure which this republic suffered have proved the value of these precepts; and whereas it belongs to the general government, under the Constitution of the Union, "to provide for the common defence and to promote the general welfare:" Therefore—

Resolved by the general assembly of Maryland, That a knowledge of the topography of the country is of essential importance, as well for the promotion of works of internal improvement as to give effect to military operations, and that this knowledge should be gathered by repeated surveys and proper maps and charts deposited in our archives; and as the acquisition of such information (alike useful in peace and war) can only be made by those who, devoting their talents and energies to the duty, become skilled in scientific principles and accurate in practical details, the topographical corps of the United States should be fostered and gradually increased.

Resolved, That the Ordnance department is of peculiar importance, requiring fidelity and practical skill and scientific knowledge in its administration. Its efficient organization is therefore demanded, as well to insure the fabrication and preservation of our arms in sufficient abundance as to render the ingenuity and science of those to whom these duties are intrusted available and beneficial to the country.

Resolved, That the establishment of fortifications throughout our borders should be persevered in as essential to the security of the important outlets of our commerce, and at the same time to give additional maritime strength to the Atlantic States.

Resolved, That the establishment of a national foundry for the fabrication of cannon is required, as well to provide for the armament of our fortifications as to furnish proper field trains, to be distributed throughout the different States; and that, by such an establishment, not only would artisans be drawn together, but the true principles of economy be preserved by the government commanding, at all times, the means of supplying the most important arm of defence in quantity and quality, as the emergency may demand.

Resolved, That our senators be instructed, and our representatives in Congress be requested, to advocate the views and measures recommended in the foregoing resolutions.

Resolved, That the governor be requested to transmit a copy of the above resolutions to each of our said senators and representatives.

By order :

JOS. H. NICHOLSON, *Clerk.*

By THE HOUSE OF DELEGATES, *March 6, 1832.*

Read the second time by special order, and unanimously assented to.

By order :

G. G. BREWER, *Clerk.*

No. 527.

[1ST SESSION.]

ON THE CONSTRUCTION OF A MILITARY ROAD FROM MATTANAWCOOK TO MAR'S HILL,
IN MAINE.

COMMUNICATED TO THE SENATE APRIL 17, 1832.

DEPARTMENT OF WAR, *April 16, 1832.*

SIR: In compliance with the resolution of the Senate of the 9th instant relative to "the military road in Maine from Mattanawcook to Mar's Hill," I have the honor to transmit a report of the quartermaster general, which contains the information required.

I have the honor to be, very respectfully, your obedient servant,

LEWIS CASS.

The PRESIDENT of the Senate of the United States.

QUARTERMASTER GENERAL'S OFFICE, *Washington City, April 13, 1832.*

SIR: In compliance with a resolution of the Senate of the 9th instant, referred by your order to this office on the 11th, directing the Secretary of War to inform that body "what portion of the military road in Maine, from Mattanawcook to Mar's Hill, has been completed according to the original design, and in the manner other military roads have been constructed; what alterations in the original design are recommended; and to transmit an estimate of the expense of completing the road in the manner originally contemplated, and also according to the proposed alterations, as far as the boundary line of the United States, near Houlton, with such information as he may be able to communicate relative to the importance of said road, and the manner of constructing the same," I have the honor to report that the whole distance from the Mattanawcook to Houlton is *sixty-eight miles*; that it was originally intended to construct the military road between those points thirty-three feet wide, and that a section of sixteen miles was completed according to the original design; but in consequence of the difficulties presented by the nature of the country to the rapid construction of a road, which were discovered, after the work had been commenced, to be much greater than had been anticipated, together with the necessity for an immediate practicable communication between our depot of supply at Bangor and the military post at Houlton, I recommended a reduction in the width of the remaining sections to twenty-two feet, which is rather more than the ordinary width of the military roads in the southern and western States and Territories of the United States. The Secretary of War approved of the reduction, and the last appropriation was made on an estimate prepared in reference to the reduced width of the road.

To complete the road according to the original design would require at least \$45,000—a greater expenditure than could be warranted by any advantage likely to accrue, in a mere military point of view, in time of peace; but if it be proper at this time to consider the road in relation to the defence of the north-eastern frontier in the event of war, that expenditure would be trifling compared with its great military advantages. From information recently received, I am decidedly of opinion that the width of the road should be increased from twenty-two to twenty-eight feet; and, for the reasons for my opinion, I beg leave to refer to the annexed copy of a report from Lieutenant Thomas, the superintendent of the road, (see paper marked A;) and I have the honor to submit an estimate of the amount required to complete the road as proposed by Lieutenant Thomas.—(See paper marked B.)

The fourth item of \$1,750, for making a road from Houlton to the British line, might be omitted. Should the government consider it good policy to extend the road to the line, the troops could perform the work with no other expense than the per diem of 15 cents allowed to them by law. There would be no advantage obtained by extending the road from Houlton to Mar's Hill; consequently no estimate has been presented or appropriation made for that section.

The road is necessary to the supply of the garrison at Houlton in time of peace, and its importance in that view alone may be estimated by the effect which it has already had on the cost of the transportation of military stores. The cost of transportation from Bangor to Houlton, in summer, has been reduced from \$120 to \$65 per ton of 2,000 pounds; and, in winter, from \$49 to \$20 per ton of 2,000 pounds.

I return the resolution; and have the honor to be, sir, your obedient servant,

THOMAS S. JESUP, *Quartermaster General.*

Hon. LEWIS CASS, *Secretary of War.*

A.

WASHINGTON CITY, *April 9, 1832.*

SIR: In obedience to your order directing me to make a further and more detailed report in relation to the military road now being constructed in the State of Maine, with a view to the completion of the same to the British line near the United States garrison at Houlton, on the plan originally commenced, or with the greatest reduction possible to have it efficient and durable, and suitable for the purpose intended and required, I beg leave to report, and in so doing must of necessity state many facts which you are already acquainted with, and which I have heretofore mentioned.

The law of 1832 contemplated the construction of "a military road from Mattanawcook to Mar's Hill, Maine," a distance of about one hundred miles. A resolve, passed March, 1829, "authorized the President of the United States to survey and mark it from any intermediate point to the mouth of the Madawasca river." A military post having been established at Houlton, it has not been opened further than that point, a distance of about seventy miles. This, under existing circumstances, has been deemed sufficient for the present, and probably will be for all purposes originally designed.

It is almost useless to state the absolute necessity of having a good road from Bangor to the United States garrison at Houlton. Any one examining the map of the country will at once perceive the importance of it, and that it ought not to be considered in any other light than purely a military one. It was located with no other object in view, and does not pass through a section of country which, had the State of Maine been consulted, would have been selected. There are no settlements for about fifty miles on it, and the middle section, about thirty miles, is generally barren and entirely unfit for cultivation. It connects with the State road by the nearest and safest route, Bangor and the United States garrison at Houlton, and is the only road which leads to the frontier of the northern part of the State.

The road, you are aware, was originally designed to be built thirty-three feet wide, which I believe is the width of all the military roads that have been constructed by the United States on the frontiers. It was commenced on that scale, and about sixteen miles of it completed. On account of the difficulties and delays consequent upon opening a road through a wilderness, the want of sufficient funds for continuing it the original width, and the necessity there was of having an immediate communication opened between Bangor and the United States garrison at Houlton, it was thought advisable to reduce it to twenty-two feet. This width, at that time, it was supposed, would be sufficient for all ordinary purposes; but three years' experience in superintending the construction of it has convinced me to the contrary, and I have no hesitation in stating that I believe it is not possible to render it sufficiently permanent and durable unless constructed a greater width. The road being composed almost entirely of earth, the country being heavily timbered and generally level, and interspersed with swamps, it is difficult and tedious to

drain, and it requires so long a time for the water to pass off and the road to become dry and firm that I find it impossible to give it, when constructed only twenty-two feet wide, including the ditches, as this is, sufficient and proper firmness and consistency, without raising it so high as to render it extremely dangerous for carriages passing each other; but if constructed twenty-eight feet wide, as recommended, it will admit of two travels, and allow of loaded wagons passing each other with perfect safety. Less than this width it will not; and in several instances I have been compelled to make it that width to render it at all safe or useful. This might not be necessary through a settled country, but it must be borne in mind that this road passes through a wilderness where the sun has little power.

I was always of opinion that the principal road ought to be constructed at least thirty-three feet wide; and when I advocated the reduction of this to twenty-two feet, you will recollect, it was considered only as a temporary or branch road, supposing that the principal road would be made to the Madawaska. This being abandoned, and the station at Houlton being thought equal, if not superior, to the point above as a military one, it now becomes necessary to make it permanent and durable by constructing it at least twenty-eight feet, if not of the width commenced. I am aware that the present road, if used for no other purposes, would answer for the transportation of supplies for the use of the United States garrison at Houlton, but, in addition to this, it must be recollected that it is severely tried by heavy teams continually travelling over it, unconnected with the service of the United States. This will, at its present width, render it nearly impassable in a few years.

A strict regard to economy has been always preserved in the construction of this road, but it may be extended too far, and it certainly will be if it should not be completed of the width recommended. While the road constructed thirty-three feet wide, part of which has been completed three seasons, is now and will continue in good repair, many parts of that made twenty-two feet wide (although equally well constructed) but two seasons, is already out of repair in many places, and will be nearly impassable without extensive repairs in the course of a few years. And I again repeat that, from an experience of three years in the construction of this road, I am decidedly of opinion that a basis of earth less than twenty-eight feet in width cannot be relied on for loaded teams through such a country as this is over, but will be continually giving way and needing extensive repairs.

I have made the necessary inquiries, and have ascertained to a certainty that it will require, to complete the road on the plan recommended, (say twenty-eight feet wide,) the sum of \$20,165; and to complete the bridges, and for contingent expenses, a further sum of \$2,835—making in the aggregate the sum of \$23,000.

For this sum the road and bridges can be finished in each and every particular, and, when completed, will be equal to any earth road in the country.

All of which is respectfully submitted by your obedient servant,

CHAS. THOMAS, *Assistant Quartermaster United States Army.*

Major General THOS. S. JESUP, *Quartermaster General U. S. Army, Washington.*

B.

Estimate of funds required to widen and extend the military road, Maine, from the second mile beyond the mouth of the Matawankeag river to the British line, about one and a half mile east of Hancock barracks, (Maine,) and for finishing the bridges on the same.

1. For widening the road six feet, from two and a half miles beyond the mouth of the Matawankeag to about one mile beyond the Molunkus—say, 2,600 rods, at \$1 per rod.....	\$2, 600
2. For widening the road six feet, from the above point to the forks of the Matawankeag—6,124 rods, at \$1 25 per rod.....	7, 655
3. For widening the road six feet, from the above point to Hancock barracks—8,160 rods, at \$1 per rod.....	8, 160
4. Constructing a road from Hancock barracks to the British line—about 500 rods, at \$3 50 per rod.....	1, 750
5. Finishing bridge over the Matawankeag river, near its mouth, being additional work required on abutments, piers, ice-breakers, &c.....	2, 000
6. For a bridge over a new channel on the Mitopitlock stream, extending it to present bridge..	200
7. Contingencies.....	500
	22, 865

NOTE.—The last three items will be required, whether the road is widened or not, to meet the expenditures which will necessarily be incurred.—(See accompanying report.)

CHAS. THOMAS, *Lieutenant and Assistant Quartermaster U. S. Army.*

BANGOR, *Maine, December 27, 1831.*

22D CONGRESS.]

No. 528.

[1ST SESSION.]

ON THE CLAIM OF A PROFESSOR OF THE MILITARY ACADEMY, WHO LOST HIS EYE-SIGHT IN THE SERVICE, TO A PENSION.

COMMUNICATED TO THE SENATE APRIL 17, 1832.

Mr. DALLAS, from the Committee on Military Affairs, to whom was referred the petition of Joseph Du Commun, reported:

That the petitioner, in the year 1817, was employed, by authority from the Executive of the United States, as a teacher of the French language at the Military Academy, and was allowed the pay and emoluments of a captain in the line of the army. He continued to be thus employed until late in the year 1831, having, during all this service of fourteen years, ably and faithfully discharged his duties. His great devotion, however, to these duties caused him to contract a disease of the eyes which rendered him totally blind, and, in the month of December, 1831, he was thereby wholly disqualified. He has been, of course, obliged to surrender the appointment he held to a successor, and is thence left destitute and helpless. Deeming his case to be one fairly within the principle of the invalid pension act, and that he may claim the allowance granted to a captain in the line of the army who has been disabled in service, he applies for that purpose to the justice and generosity of Congress.

The material facts in support of the petitioner's application are stated in the certificates of Colonel Thayer, the superintendent of the Military Academy, and of W. F. Wheaton, a surgeon in the army stationed at that post, both of which are annexed to his petition.

The committee report a bill for his relief.

22D CONGRESS.]

No. 529.

[1ST SESSION.]

ON AN APPEAL OF COLONEL D. E. TWIGGS THAT INJUSTICE HAD BEEN DONE HIM IN A REPORT OF A COMMITTEE OF THE HOUSE OF REPRESENTATIVES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 28, 1832.

Mr. E. WHITTLESEY, from the Committee of Claims, to whom was recommitted its report on a bill from the Senate for the relief of D. E. Twiggs, reported:

That, soon after said report was recommitted, Colonel Twiggs met a part of the members of said committee, and was informed that any explanation or evidence which he might wish to offer must be in writing, and, when presented, would be laid before the House. He afterwards addressed a letter to the chairman, which has been examined and duly considered by the committee, and will accompany this report. He produced no evidence to remove any of the exceptions taken in the former report to an allowance of the claim. The committee refer to that report for the principles which governed its decision. In the letter that Colonel Twiggs wrote, as mentioned, he appears to feel aggrieved that he was not informed of the objections against his account, and he intimates that the report as necessarily implicates the Secretary of War, the Committee of Ways and Means, the Committee on Finance in the Senate, and the Senate itself, as it does the claimant. Colonel Twiggs's case was before the committee for investigation, and, on examination, the committee thought his account was not proven as it should have been. He was not in the city, and it was apparent from the account itself, so far as he claimed remuneration for money paid, or for his liability to pay money on account of the suits that he defended, that the witnesses were at Green Bay, at a distance so remote that their testimony could hardly have been expected within the time that Congress has ordinarily closed its session. His claim, it will be seen by the report, was not unceremoniously rejected without assigning the reasons; but the principles that govern the committee in such cases were laid down, and the defects in the testimony clearly pointed out, so that he might be enabled to show hereafter that he was entitled to relief. The committee take great pleasure, when the claimant is in attendance, to point out informally any chasms in the testimony, where it is believed they can be readily filled. But if he is not in attendance, or if his proof is not at hand, the usual course has been, and experience has proven it to be correct, to lay down the principles that govern the case, and show in what particulars the testimony is deficient. The committee are not conscious that Colonel Twiggs has any just cause to complain that he was not notified that, in the opinion of the committee, his accounts were not proven. It was stated in the former report that the first five items in the account were not allowed, because there was no satisfactory evidence that he had paid the amount they contained to the persons who rendered the services. The committee, however, reserved the right of deciding on the reasonableness of these charges, and drew a distinction between those cases when, on a trial, judgment was recovered after a full defence, and when the claimant sought for indemnity for cost and expenses not included in the judgment; and, in the former case, it was conceded that the judgment concluded the committee as to the amount contained in it, whereas, in the latter case, the reasonableness of charges was a proper subject for the examination of the committee. Colonel Twiggs combats the soundness of this distinction, and refers to some cases to sustain his views. In those cases judgments had been recovered, and sums of money were appropriated to discharge them.

The proof on which the committee acted cannot be known by consulting the law. There may be evidence in the cases referred to that the claimants had paid the money, but it is more probable that the judgments were discharged by the payment being made by the Secretary of the Treasury directly to the plaintiffs.

The case before the committee has no analogy to those referred to by Colonel Twiggs. He asks to be remunerated for money expended in defending suits, and this without exhibiting any proof that he has paid a cent in the cases referred to—judgments had been recovered and money was appropriated to pay them. There are cases where the Secretary of the Treasury has been directed to liquidate claims for attorney fees, and for expenses incurred by an officer in defending suits; and it cannot be believed he has not required other evidence than an account from the person said to have rendered the services.

As to the censure which Colonel Twiggs intimates that this committee have imputed to the Secretary of War, and to two other committees, and to the Senate, needs no further notice than that no such censure can be inferred from the report, except that this committee differed from the Secretary of War, the two committees mentioned, and from the Senate, in its views of the merits of the claim as presented. Such opinion it had a right to express, and that opinion is now maintained after another patient investigation of the case.

WASHINGTON, April 25, 1832.

Sir: It is with no ordinary feelings of surprise and mortification that I have seen the report submitted by you from the Committee of Claims, upon the bill from the Senate providing for my relief. Had the committee, previously to presenting a report wounding to my feelings, and, without full explanation, derogatory to my character, deemed it important to suggest to me the objections which were entertained, and the difficulties which existed, in relation to any of the circumstances attending it, I cannot but believe that some of the comments of which I complain would have been withheld; and even now I cannot refrain from indulging a confident hope that, upon a fuller examination, the committee will take pleasure in affording to me ample justice.

The general language of the report would seem to convey the imputation that I had not frankly communicated all the circumstances of the case submitted to the consideration of Congress, but had either suppressed or given a color to facts which, when investigated, essentially change the character of the claim. A reference to the Secretary of War will, I apprehend, entirely remove every such impression from the minds of the committee. My original application was addressed to the War Department; the subject was fully examined by the Secretary, and an inquiry addressed to that functionary would have led to the satisfaction of the committee that the various items which compose it were investigated by him, and that all the facts now in the possession of the committee, and indeed others, were well understood. The result of the investigation then made was, as the committee are apprised, a favorable recommendation of the case to the consideration of the Committee of Ways and Means of the House of Representatives. The report of that committee in favor of the allowance, the sanction given to that report by the Committee on Finance of the Senate, and the subsequent approval of the Senate, expressed by the passage of the bill in question, are all well known to the committee over which you preside, for they are distinctly referred to in your report.

Under these circumstances, it appears to me that any imputation upon me for having presented a view of the circumstances attending my claim, which a fuller investigation of its merits shows to be erroneous and deceptive, must necessarily implicate not merely the Secretary but the two committees, and the Senate itself, in the charge of having incautiously, and without examining evidence so easy of access, recommended my case to the favorable consideration of Congress. I feel a strong assurance that had this view of the case been distinctly propounded to the committee, an inquiry would have been made which would have relieved all who may be implicated from any degree of just censure.

May I be permitted very respectfully to suggest some matters for the consideration of the committee in relation to some of the views presented in their report? A distinction appears to be drawn between cases in which a judgment has been recovered against an officer acting within the sphere of his official duty, and thereby subjected to prosecution, and those in which he has successfully defended himself against the suit. With great deference to the better judgment and more mature experience of the committee, it appears to me that no such distinction, if it actually exist, can have any application, however remote, to the present case. Even had a judgment been recovered, it could have done no more than simply ascertained the amount of damages in which the officer was mulcted, but could throw no light upon the inconvenience, labor, or expense, to which he had been subjected in defending the suit. Of these items of charge, essentially necessary to a complete remuneration and indemnification, there can be no record evidence. The amount of them must be established by testimony extrinsic to the record. All that it was necessary for me to do, I had apprehended, was to show to the satisfaction of the Congress that suits had been instituted against me for acts which my obligations to the government made it incumbent upon me to perform. The proof of these facts I had presumed would entitle me to indemnification against the consequences of my acts at the hands of the government.

It had never occurred to me, nor was I advised by my friends, that it was important, much less essential, that I should show that I had, in point of fact, paid out of my own pocket what I claimed as an indemnification, as a preliminary to the presentation or even payment of my demand. The precedents of similar allowances by statute did not inform me that such a requisition had ever been made. The instances are numerous, and need not be specially brought under the view of the committee, in which, upon the mere presentation of the record of the suit, before any liquidation of the judgment, a bill has been passed authorizing full indemnification. The party liable to pay has been enabled, by the funds obtained from Congress, to discharge his liability. This has been the case as well in regard to the sum ascertained by the judgment, as for the collateral expenses to which the defendant has been subjected. It never was required of Mr. Gelston, as preliminary to the appropriation of \$130,000 to his indemnification in the general appropriation act of April, 1818, that he should show he had paid that sum, for, by the terms of the appropriation, it was for the purpose of discharging the judgment obtained against him. The recent cases of the marshal of the eastern district of Pennsylvania must be fresh in the recollection of the committee.

I cannot, however, while on this point, refrain from referring to the act for the relief of Lieutenant

Robert F. Stockton, passed in March, 1823. That act was passed before all the money was paid, and all the expenses incurred, for which it was designed to provide. Future expenses are expressly included in the provisions of the act, and no limit was fixed for the allowances. The committee appear to rest their principal objection to the claim which I have presented on the single ground that the evidence is not satisfactory that any of the first five items of charge have been paid. They further say that "these accounts are admissible if Colonel Twiggs shall prove he has paid them," &c.

I have never undertaken to prove or to assert that all these moneys have been paid; and had the committee thought proper to propose the inquiry, they would have learned that some of the accounts have been forwarded to me to this place, as evidence not of what I had paid, but of what I was liable and called upon to pay. If I have been mistaken in the supposition that the proof of actual payment was not essential, such an error is, I trust, an excusable one, and I disclaim all idea of designing to impress upon the committee the opinion that such payment had been made.

As the committee have glanced at the amount of the attorney's fees, I shall barely remark that my experience upon these subjects has fortunately been too limited to justify me in entertaining any confidence in my own judgment when in opposition to that of the committee, but I cannot but indulge the belief that a consideration of the distance to be travelled by the counsel whom I retained, and the effective service rendered at three separate terms of the court, have not been exorbitantly estimated.

Upon the subject of items of charge for transportation, it appears to me that the difficulty which the committee has raised may possibly have originated in a mistake committed by myself in the designation of the ground of claim. Being a military man, and habituated to military phraseology, and designing my account for the action of the War Department, I employed a term well known to all who it was presumed would have to act upon the case. In ordinary cases, the same meaning would perhaps be more accurately indicated by the phrase "travelling expenses." Most cheerfully would I acquiesce in the application of the principle sanctioned by the committee, by which the proper allowance in such cases is limited to the sums "actually and necessarily expended." The amount stated in my account would fall short of that sum. Had I submitted, as has been done in other instances, to allowing judgment to be rendered against me; had I withheld my personal exertions, and omitted to employ competent professional aid, the amount recovered would have been much enhanced. But had not I felt impelled by a sense of public duty to encounter this labor, and incur these responsibilities in resisting what I conceived an unjust claim through me upon the government, I could easily have postponed an execution upon the judgment which would have been had, until indemnification was provided by Congress.

What are the particular circumstances to which the committee refer, and which they state give to one of the items so extraordinary a character as to cast a suspicion over the whole account, I am unable to conjecture; nor does it distinctly appear what kind or degree of suspicion has been awakened. The manner in which the item is charged precludes the idea that any concealment was designed, for it specifies the points between which the travel occurred; the presentation of a claim to the very department where alone existed the fullest information upon all the matters elicited by the committee, is equally conclusive to show that any such attempt would have been instantly met and exposed. An imputation of so serious a character ought not to be made without ample grounds and full inquiry; and I submit to the committee that common justice would appear to require that, before such an accusation is publicly preferred, I should have been apprised of the doubts which the committee entertained. I trust further consideration and inquiry will induce the committee to believe that I have been unjustly assailed. Such inquiry will also probably satisfy the committee of the perfect truth of my assertion, that the allowance of every item of my account would not fully indemnify me for the expenses and liabilities incurred in consequence of this prosecution against me.

In concluding this appeal to the committee, I cannot but indulge the hope that the language employed in the report calculated so seriously to affect my character and to wound my feelings, will appear to have been unjustly applied to me; and the confident assurance that the gentlemen of the committee who have sanctioned it will relieve me from the imputations which have been cast upon me.

D. E. TWIGGS.

HON. E. WHITLESEY, *Chairman of the Committee of Claims of the House of Representatives.*

22D CONGRESS.]

No. 530.

[1ST SESSION.]

APPLICATION OF OFFICERS OF THE ARMY THAT BREVET RANK MAY NOT BE ABOLISHED.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JUNE 5, 1832.

To the House of Representatives of the United States:

The memorial of the undersigned, officers of the United States army, respectfully sheweth: That they have seen with deep regret the introduction into the House of Representatives of a bill to repeal the law which authorizes the conferring of brevet rank on officers of the army who shall have served ten years in any one grade. Lest their silence should be construed into an acquiescence in the expediency or justice of this measure, they deem it due to themselves, and to the army generally, to express the hope that the bill will not become a law.

The institution of brevet rank, conferred for continuous faithful service, is, in the opinion of the undersigned, peculiarly adapted to a state of peace and to a military organization such as that of the United States. In time of war, such a provision would be almost, if not entirely, inoperative. The casualties of service will lead to regular promotion for those who survive, or gallant conduct in the field will give a claim to the distinction conferred by brevet rank, which the bill under consideration does not

propose to impair. But in time of peace this system of promotion happily supplies a stimulus to exertion, without which, in the military service as in all other conditions of human life, advancement in knowledge and usefulness cannot be expected. Under the operation of this system, an officer who enters the army in its lowest grade at the age of twenty has, according to the present rate of promotion, the prospect of seeing himself advanced only to the grade of lieutenant colonel at sixty years of age—a prospect calculated to gratify but a very moderate share of ambition. This consideration shows also the fallacy of the idea entertained by some, that the army will, in time, be composed entirely of officers of high grade.

The additional expense to government, caused by this system under the present law relative to pay of brevet officers, is not thought worthy of consideration in comparison with the benefits of the system. In consequence of the peculiar distribution of our small army, rendered necessary by the extent of territory and the character of the service, about half of the officers (say thirty) holding brevets now draw their brevet pay; but this number can increase but little with the increased number of brevets, since the arrangements and exigencies of the service will remain nearly the same.

The peculiar adaptation of this system to the military organization of the United States is also worthy of serious consideration. Our regular force being so small, and distributed over so great an extent of territory, the defence of the country and protection of our citizens in any sudden emergency, such as experience has shown may arise even in time of peace, must depend, in a great measure, on the co-operation of the militia; and whilst none will deny the importance of experience in those entrusted with military command, the benefit of a system by which rank and eligibility to command go hand in hand with experience must be obvious. Abolish this system, and a major of the local militia, elected perhaps but yesterday, and possibly without reference to any contingency that may call for his services, may be to-day associated with, and would command, a captain in the army of fifteen years' standing, whose whole life has been devoted to the military profession. To which of these officers the lives and fortunes of his fellow-citizens may with most confidence be entrusted there can be little doubt.

Reference has been above made to the *justice* of the proposed measure. The law which it is designed to repeal has been in force since the year 1812. All the present officers, in retaining or receiving their commissions, have, therefore, had a right to regard the prospect of brevet promotion as one of the considerations for their services; and to snatch the reward from those especially who seemed to have it almost in their grasp, whilst others, not more meritorious, enjoy its benefits, must be regarded as an excessive hardship and injustice; to abolish *all* brevets, an impracticable measure; and to give the proposed repeal a distant prospective operation, seem to be the only alternatives consistent with good faith.

The undersigned are happy to have it in their power to appeal, in support of their views, to the opinions of the Secretary of War as expressed in his last annual report, to which they respectfully refer.

C. GRATIOT, *Brevet Brigadier General.*

WASHINGTON CITY, June 2, 1832.

ON THE APPLICATION OF AN OFFICER OF THE ARMY THAT THE PROCEEDINGS OF A COURT-MARTIAL IN HIS CASE MAY BE INVESTIGATED BY CONGRESS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JUNE 16, 1832.

Mr. DRAYTON, from the Committee on Military Affairs, to whom was referred the memorial of Lieutenant John Williamson, of the United States army, reported:

That the memorialist sets forth that he is suffering under the sentence of a general court-martial, of which Colonel Arbuckle was president, convened at Fort Monroe, in Virginia, on the 3d of May, 1832; that the evidence adduced at the trial did not sustain the charges against him; and that the court punished him for a crime of which he was not accused. The memorialist, therefore, prays that the whole proceed-

ings of the court may be investigated by Congress, and that they be published, together with the defence of the memorialist.

The committee being of opinion that Congress has no power either to revise or to reverse the judgment of a court-martial, they therefore recommend the adoption of the following resolution:

Resolved, That the memorialist have leave to withdraw his memorial and the papers which accompany it.

22D CONGRESS.]

No. 532.

[2D SESSION.]

ANNUAL REPORT OF THE SECRETARY OF WAR SHOWING THE CONDITION OF THAT DEPARTMENT IN 1832.

COMMUNICATED TO CONGRESS WITH THE PRESIDENT'S MESSAGE DECEMBER 4, 1832.

DEPARTMENT OF WAR, *November 25, 1832.*

SIR: In conformity with your instructions, I proceed to lay before you a brief statement of the various operations of this department for the past year, and such suggestions for the improvement of the several branches of the public service committed to its care as experience has dictated; and in executing this task it is due to the services, exertions, and fidelity of the officers at the head of the respective bureaus of the department that I should acknowledge their able assistance, and the important benefits I have derived from their counsel and co-operation in the administration of the concerns of this highly responsible office.

During the past season the hostile aggressions of the Sac and Fox Indians upon the borders of Illinois and Michigan required and received the prompt attention of the government. The executives of the States of Missouri, Illinois, and Indiana, and of the Territory of Michigan, co-operated zealously and efficiently in the measures of protection. The regular troops in the vicinity of the theatre of hostilities were concentrated under Brigadier General Atkinson and brought into the field; and the militia of Illinois, and of that part of the Territory of Michigan exposed to danger, promptly repaired to the defence of the frontier. Such was the nature of the warfare and of the country, that it was difficult immediately to protect the long line of scattered settlements and to bring the enemy to action. As a precautionary measure, and to place the result of the campaign as far beyond the reach of accident as possible, the garrisons at some of the posts upon the sea-board and upon the lakes were ordered to Chicago, under the command of Major General Scott, to co-operate with the force already employed under Brigadier General Atkinson. The celerity with which these troops moved is creditable to their character and discipline. One of the companies reached Chicago in eighteen days from Old Point Comfort, a distance by the route necessarily travelled of more than eighteen hundred miles; and the movement of the whole was marked by the greatest despatch. Unfortunately, their hopes of being useful to their country were suddenly arrested when highest by the appearance of the cholera; and probably few military expeditions have presented scenes more appalling in themselves or demanding the exertion of greater moral courage. The occasion was met by Major General Scott in a manner worthy of his high character, and the example he gave to the American army in that period of trying responsibility is not less important than was his gallant bearing in the presence of the enemy during the late war. His efforts were well seconded by the officers, and no practicable method seems to have been omitted to stay or to cure the pestilence. Of about fifteen hundred officers and men of the regular troops ordered to the northwestern frontier not less than two hundred died by the cholera.

General Atkinson, with the regular troops and militia under his command, pursued the Indians through a country very difficult to be penetrated, of which little was known, and where much exertion was required to procure supplies. These circumstances necessarily delayed the operations, and were productive of great responsibility to the commanding officer, and of great sufferings and privations to all employed in this harassing warfare. The Indians, however, were driven from their fastnesses, and fled towards the Mississippi, with the intention of seeking refuge in the country west of that river. They were immediately followed by General Atkinson with a mounted force, overtaken, and completely vanquished. The arrangements of the commanding general, as well in the pursuit as in the action, were prompt and judicious, and the conduct of the officers and men was exemplary. The campaign terminated in the unqualified submission of the hostile party, and in the adoption of measures for the permanent security of the frontier; and the result has produced upon the Indians of that region a salutary impression, which it is to be hoped will prevent the recurrence of similar scenes.

The extensive operations rendered necessary by these events have demonstrated the able organization and efficiency of the various staff departments of the army, and their capacity to meet any exigency which may require their exertions. They have also shown that the *morale* and discipline of the troops are well preserved, and that whenever or wherever their services may be wanted the expectations of their country will not be disappointed.

An act of the last session of Congress authorized the raising of six companies of mounted rangers for the defence of the frontiers. Five of these were organized without delay, immediately after the passage of the law; but owing to the absence of the person selected for the command of the sixth with the troops employed under General Atkinson, that company was not brought into service during the active portion of the season. It is now, however, filled, and under orders.

I have caused a comparative view to be appended to this report, showing the difference of cost between the maintenance of this corps of rangers and of a regiment of dragoons. It will be perceived that the former exceeds the latter by \$153,932. The rangers costing annually \$297,530, and the dragoons \$143,598; an access of expenditure well worthy of consideration, unless there are circumstances connected with the

nature of the duties of these corps which give to the rangers, as at present organized, a decided preference over the dragoons. It is my conviction that there are no such circumstances, and that a regiment of dragoons would be more efficient as well as more economical. From the constitution of the corps of rangers, and from the short periods of their service, their organization is but little superior to that of the ordinary militia. Every year there must be a great loss of time in the reconstruction of the corps and in the acquisition of the necessary experience and knowledge. And its constitution is so dissimilar from that of any other branch of the army that a perfect union of sentiment and action between them can scarcely be expected. The want of these must frequently be injurious to the public service.

Regular cavalry are fully competent to the discharge of all the duties required of mounted rangers. In celerity of movement, they will, of course, be equal, and if, (which, however, is doubtful,) the rifle is considered the most efficient arm for mounted troops, operating against the Indians, this weapon can be placed in the hands of such cavalry, and they can easily be trained to its use.

Besides other important objects, it is desirable to preserve in our military system the elements of cavalry tactics, and to keep pace with the improvements made in them by other nations. The establishment of a regiment of dragoons would complete the *personnel* of our army, and would introduce a force which would harmonize with and participate in the *esprit du corps* so essential to military efficiency, and so easily and certainly created by military principles.

It seems to be now conceded, and it surely may well be, that mounted troops are absolutely necessary for the defence of that part of the inland frontier in contact with the Indian tribes. Our permanent military posts, garrisoned by infantry, exert a moral influence over the Indians, and protect important and exposed positions. But to overtake and chastise marauding parties and, in fact, to carry on any serious operations against an Indian foe in the level regions of the west, horsemen are indispensably necessary. Presuming, therefore, that some force of this description will be retained, I have the honor to suggest the propriety of the conversion of the corps of rangers into a regiment of dragoons.

The report of the officer at the head of the Engineer department presents a comprehensive view of the operations assigned to the corps under his superintendence, in its three great divisions, of fortifications, internal improvement, and military education.

In the construction of the various works of defence upon the maritime frontier the progress has been as rapid as was compatible with a proper and economical administration of this important duty, and with the numerous calls upon the officers of that department. So much delay and loss are experienced, not only in this branch of the public service but in almost all others requiring the disbursement of money, by the late period at which the appropriations are sometimes made, that I am led to introduce the subject here, in the hope that it will engage the attention of Congress. The pecuniary loss is not the only injury, particularly in all the works of fortification and internal improvement. The operations are necessarily discontinued during one part of the working season, and too rapidly prosecuted during another, and the result is, consequently, more or less unfavorable.

The numerical strength of the engineer corps is not now sufficient for the performance of the duties required of its officers. They have all been actively and zealously engaged, and their scientific and practical attainments eminently qualify them for the discharge of the various functions they are performing, whether belonging appropriately to their profession or assigned to them by this department. For the facts connected with this subject I refer to the report of the chief engineer, contenting myself with observing that there is no economy in keeping this establishment below the numbers demanded by the exigency of the service. Either the duty will not be performed, as has happened this season in some instances, or, as happened in others, it will be worse performed, and at a greater expense; for it is impossible to transfer from civil life, or from other departments of the army, persons possessing the requisite attainments, without previous experience, to insure science and skill in the execution of these duties, and a system of vigilant supervision in the administration of their fiscal concerns. To acquire these qualifications, time and experience are necessary. And the responsibility imposed by a permanent attachment to the department, and the *esprit du corps* created by it, are both favorable to a more faithful and efficient discharge of the duties appertaining to it. For these reasons, and from the clearest conviction that such a measure is demanded by the public interest, I venture to renew the recommendation contained in my last annual report for a moderate and gradual increase of the engineer corps, and to express my full concurrence in the views presented by the chief engineer upon that subject.

The Military Academy, as will be seen by the report of the board of visitors, is steadily pursuing its course of usefulness. As an institution national in its objects, its administration, its support, it merits the fostering care of the government and the kind regard of the public. For a series of years it has undergone the rigid examination of the most respectable citizens, selected from every part of the country, many of whom have arrived there with strong prejudices against it, but all of whom, I believe, have returned with a deep conviction of its importance and admirable management. As a school where the various sciences auxiliary to the art of war are taught, and taught most thoroughly, as a camp of instruction, where the practical duties of the soldier are acquired, and where the difficult art of governing is learned, by learning first the duty of obedience; as a place of deposit, where all the improvements in military knowledge, throughout the world, are ascertained, preserved, and investigated; and as a point of concentration, where young men are brought into friendly contact and emulation, from every part of the Union, and are sent out to defend their country, with their sectional prejudices diminished and their views enlarged, it is among the most valuable possessions of the republic.

I coincide in opinion with the board in the suggestions they have made, and commend them to your favorable notice. From personal inspection I am satisfied that the additions to the buildings, pointed out in the report, are required by the public interest, and that they are essential to the comfort of the professors and pupils, and to a due prosecution of their duties and studies. And especially am I impressed with the importance of a proper place of public worship, where all the persons attached to the institution, amounting, with their families, to more than eight hundred individuals, can assemble and unite in the performance of religious duties. In a Christian community the obligations upon this subject will not be questioned; and the expense of providing a suitable place of worship, especially as a chaplain is maintained there, cannot be put in competition with the permanent advantages of a course of religious instruction to such a number of persons, a large portion of whom are at that critical period which determines whether the future course of life shall be for evil or for good.

The reasons heretofore urged for an augmentation and more efficient organization of the topographical corps still exists in full force. The duties assigned to that branch of the staff require extensive scientific attainments, together with much experience. They are productive of important advantages, as well in

peace as in war, and therefore address themselves, with peculiar force to the favorable consideration of the government. This corps is not sufficiently numerous for the discharge of the duties required of it, and the additional expenditures rendered necessary by this state of things exceed the amount demanded by the proposed augmentation. Independently, however, of the absolute economy which would result from the adoption of this measure, it is called for by other and not less forcible considerations. All experience proves that a corps organized upon military principles is more responsible, more efficient, and better governed than individuals can be, who are united by different and ordinary associations. Causes are put in operation which necessarily produce emulation, professional pride, and united action. The character of the corps is dear to every individual, and each becomes identified with its prospects and reputation. Officers temporarily assigned to topographical duties cannot be expected to feel the same interest in the prosecution of these labors which they would do if they were constituent members of the corps, and looking forward to it for advancement in professional standing as well as in military rank. Many officers, however, are thus occasionally employed, and were they not so much of this branch of the public interest would remain unexecuted. An efficient and increased organization, fully adequate to the duties of the corps, may be effected without any addition to the public expenditure. For the details of such a plan I beg leave to refer to the report of the officer temporarily in charge of that bureau.

There is probably no class of officers under the government whose compensation is more inadequate to their services than that of the medical staff of the army. There are but two grades, surgeon and assistant surgeon, in this corps; and the pay of the former is forty-five dollars, and the pay of the latter is forty dollars per month.

The prospect of gradual and continued promotion held out to the other officers of the army is a powerful incentive to good conduct, and when realized becomes its just reward. Of this the medical officers are deprived, for the slight difference of rank and pay at present existing is scarcely worthy of consideration. The nature of their profession, requiring time, experience, and pecuniary means for its acquisition; the responsible and arduous services demanded of them; the relation, not always a pleasant one, in which they stand to the line of the army; and I may add, in justice to this meritorious class of officers, their general capacity, respectability, and good conduct, entitle them to a higher rate of compensation; and I indulge the hope that their claims will be favorably considered.

In the subsistence of the army an important change has been made, which, I trust, will prove salutary to the health and morals of the troops. In lieu of the spirituous liquor, which formerly composed a part of each ration, a commutation was some time since established, by which its value was paid to each soldier in money; but at the same time he had permission to purchase this destructive article from the sutler of the post. The regulation you have recently authorized substitutes coffee and sugar for the commutation previously established. Four pounds of coffee and eight pounds of sugar are hereafter to be issued with every one hundred rations. And at those posts where the troops prefer it ten pounds of rice are allowed to the same number of rations, instead of the beans, which have formed a constituent portion of the subsistence of the soldier. From a comparative estimate furnished by the commissary general, it appears that this alteration in the component parts of the ration will add but two mills and four-tenths to its cost, and will increase the whole amount of the army subsistence by a sum not exceeding six thousand dollars—an expenditure not to be regarded when the benefits resulting from it are taken into view. Simultaneously with this arrangement a regulation was adopted prohibiting the sale of spirituous liquor by the sutlers to the troops, and its introduction, under any circumstances, into the camps and forts of the United States, with the exception of the hospital stores, and of the quantity necessary to issue under that provision of the law which allows an extra gill to every soldier engaged in fatigue duty. No authority to dispense with this is vested in the Executive, and Congress alone can interpose the necessary remedy. I am satisfied the great cause of public morals, as well as the discipline and efficiency of the army, would be promoted by an entire abolition of these issues, and I cannot but hope that the legislative authority will be exerted for that purpose. An addition of three cents to the sum allowed for extra daily labor would be more than an adequate pecuniary compensation for the deprivation herein recommended, and would increase but in a very inconsiderable degree the public expenditure.

A very partial knowledge of the actual condition of our army is sufficient to satisfy the most superficial observer that to habits of intemperance may be traced almost all the evils of our military establishment. These need no enumeration that an adequate conception may be formed of their nature and consequences. But it is time that an enemy so insidious and destructive were met and overcome; that all palliatives were abandoned, and that a system of exclusion—of entire, unconditional exclusion—were introduced and enforced. Every just consideration of policy and morality requires this measure, and public opinion is certainly prepared for, and would approve it. I earnestly recommend the subject to your most favorable consideration.

I beg leave to refer you to the accompanying report of the officer in charge of the bureau of Indian Affairs for a detailed statement of the operations and condition of that branch of the public service.

Among the southern and southwestern Indians no event has occurred to disturb the relations existing between them and the United States. The settled policy of the government to induce the Indians to remove beyond the limits of the respective States and Territories, where this can be done upon reasonable terms, and with their free consent, has been steadily kept in view. The objects and necessity of that policy are so clearly stated in the message of the President of the United States to Congress of December 2, 1825, that I take the liberty of drawing your attention to those remarks:

"In the practice of European States," says President Adams, "before our revolution, they (the Indians) had been considered as children, to be governed; as tenants at discretion, to be dispossessed as occasion might require; as hunters, to be indemnified, by trifling concessions, for removal from the grounds upon which their game was extirpated. In changing the system, it would seem as if a full contemplation of the consequences of the change had not been taken. We have been far more successful in the acquisition of their lands than in imparting to them the principles, or inspiring them with the spirit, of civilization. But in appropriating to ourselves their hunting grounds we have brought upon ourselves the obligation of providing them with subsistence; and when we have had the rare good fortune of teaching them the arts of civilization, and the doctrines of christianity, we have unexpectedly found them forming, in the midst of ourselves, communities, claiming to be independent of ours, and rivals of sovereignty within the territories of the members of the Union. This state of things requires that a remedy should be provided—a remedy which, while it shall do justice to these unfortunate children of nature, may secure to the members of our confederation their rights of sovereignty and of soil. As the outline of a project to that effect,

the views presented in the report of the Secretary of War are recommended to the consideration of Congress."

"While some of our citizens," says General Porter, in the very able report here referred to, "who are the advocates of primitive and imprescriptible rights, in their broadest extent, contend that these tribes are independent nations, and have the sole and exclusive right to the property and government of the territories they occupy, others consider them as mere tenants at will, like the buffalo of the prairies, to be hunted from their country whenever it may suit our interest or convenience to take possession of it. These views of their rights and disabilities are equally extravagant and unjust; but the misfortune is, that the intermediate line has never been drawn by the government. Nothing can be more clear to one who has marked the progress of population and improvement, and is conversant with the principles of human action, than that these Indians will not be permitted to hold the reservations on which they live, within the States, by their present tenure, for any considerable period. If, indeed, they were not disturbed in their possessions by us, it would be impossible for them long to subsist, as they have heretofore done, by the chase, as their game is already so much diminished as to render it frequently necessary to furnish them with provisions in order to save them from starvation. In their present destitute and deplorable condition, and which is constantly growing more helpless, it would seem to be not only the right but the duty of the government to take them under its paternal care, and to exercise over their persons and property the salutary rights and duties of guardianship.

"The most prominent feature in the present policy of the government, as connected with these people, is to be found in the efforts that are making to remove them beyond the limits of the States and organized Territories.

"A very extensive tract of country, lying to the west and north of the Arkansas Territory, has lately been set apart for the colonization of the Indians."

"Let such of the emigrating Indians as choose it, continue, as heretofore, to devote themselves to the chase in a country where their toils will be amply rewarded. Let those who are willing to cultivate the arts of civilization be formed into a colony, consisting of distinct tribes or communities, but placed contiguous to each other, and connected by general laws, which shall reach the whole. Let the lands be apportioned among families and individuals in severalty, to be held by the same tenures by which we hold ours, with perhaps some temporary and wholesome restraints on the power of alienation. Assist them in forming a code of laws adapted to a state of civilization."

In regard to such Indians as shall still remain within the States and Territories, and refuse to emigrate, let an arrangement be made with the proper authorities of the States in which they are situated for partitioning out to them in severalty as much of their respective reservations as shall be amply sufficient for agricultural purposes. Set apart a tract proportioned in size to the number of Indians to remain, in common, as a refuge, and provision for such as may, by providence, waste their private property, and subject them all to the municipal laws of the State in which they reside. Let the remainder of the reservation be paid for by those who hold the paramount right at such prices as shall be deemed, in reference to the uses which Indians are accustomed to make of it, reasonable, and the proceeds be applied for the benefit of those of the tribe who emigrate after their establishment in the colony, or be divided between those who emigrate and those who remain, as justice may require."

To the views herein presented of the condition of the Indians, of the prospects which await them, and of the only efficient remedy in their power to seek, or in that of the government to apply, I take the liberty of adding my own testimonial, founded on an intimate intercourse with them of eighteen years, both personal and official, under every variety of circumstances, in peace and war, and in very remote regions, as well as within our own settlements. The principles laid down in these extracts are substantially the same as those which now regulate the government in all their transactions with the Indians, when the question of their permanent establishment or removal is brought under discussion. So far as respects the emigrating Indians, this will clearly appear by reference to the instructions of the commissioners now engaged in the adjustment of all the unsettled matters connected with the great plan of colonization. With regard, however, to those Indians who refuse to remove, it has not been deemed expedient for the government, by its own act, either to partition out to them the land necessary for their support or to decide upon the consideration to be allowed for the residue, and to direct its appropriation. This, so far as regards the general government, has been and continues to be the subject of conventional arrangement, in which the parties, by mutual discussion and compromise of opinion, arrive at a satisfactory result. In these arrangements, where the parties desire it, adequate tracts of land in fee, with "temporary and wholesome restraints," upon the right to sell, are secured to all who desire to remain. That this system of "guardianship" is, however, founded upon a just and intimate knowledge of Indian character, no one acquainted with that character will question. I need not now inquire whether a practical resort to the principles resulting from it will ever become necessary. If it should, no doubt every arrangement which justice and humanity call for will be liberally made.

In your message to the Senate of February 22, 1830, you explained your views of the question of jurisdiction over the Indian tribes living within the respective States and Territories, and stated that, in your opinion, and in the words of the above report, they were "subject to the municipal laws of the State in which they reside," in all cases where such laws were extended over them.

The progress of events since 1828 has confirmed, if confirmation were wanting, the correctness of these principles, and their adaptation to the actual and prospective condition of the Indians. The circle of civilization and improvement has extended, and various tribes have retired, or are retiring, before it. The experience of the four years which have intervened does not furnish one consolatory hope that the insulated bands who have reserved and occupy tracts surrounded by our settlements can permanently retain these positions and prosper. There are moral, political, and physical causes, all in operation, which cannot be controlled, and which forbid such an expectation. And, in fact, the whole history of our intercourse with our primitive people teaches no one lesson more important than this; and it will be fortunate for their prosperity and for our responsibility if, in its practical application, both parties should become satisfied that the system provided by the act of May 28, 1830, offers the only rational prospect of a durable and happy residence for the Indians. A few individuals, almost always half-breeds and their connections, engrossing the intelligence and means of each of these small communities, and too often without regard to the rights or fate of others, may become assimilated to our institutions, and eventually planted among us with safety. But this should never be permitted at the sacrifice of more important interests and to the utter disregard of the fate which awaits the unfortunate mass of these tribes, persuaded or almost compelled to remain where they must rapidly decline and at length disappear. And the causes

which enact this law are not less obvious in their origin than they are certain in their operation. Their progress is onward, and, regret them as we may and must, no human power can arrest their march or avert their consequences. The effort has been made for generations, and in every mode that wisdom or philanthropy could suggest, and yet in not one solitary instance has it produced any permanent and general beneficial effect. And we may survey our whole cultivated territory in the vain expectation of discovering one aboriginal community, however small, which has withstood the ceaseless pressure of civilization, and which holds out the slightest prospect of moral or physical improvement, or even of eventual subsistence, for the great body of the individuals composing it. If such a community exists it is unknown to me; and, in fact, if one is believed to exist, it is only by those who are acquainted with its actual condition, and with the internal history of its wants, its dissensions, and its oppressions.

The act of Congress of May, 1830, created a barrier beyond which the dispersed remnants of our various Indian tribes may be collected and preserved. The provisions of that act are plain, salutary, and comprehensive. It is a solemn national declaration, containing pledges which neither the government nor the country will suffer to be violated. It secures to the Indians for ever the undisputed possession and control of the region allotted to them, and makes such arrangements as are essential to the subsistence, safety and comfortable establishment of the colonists. No similar attempt has ever been heretofore made, and therefore no unfavorable deductions can be drawn from the failure of preceding efforts, having in view the same general object, but endeavoring to attain it by far different means. No organized government exists, or can exist, to assert jurisdiction over these tribes; and treaties of cession are incompatible with the whole basis of the plan of settlement.

All the testimony before this department concurs in representing the country assigned for a land of refuge as abundantly extensive and fertile for the support of the Indians, and as presenting in its climate, its animal and agricultural productions, and its general circumstances, features admirably adapted to their situation and wants. Important benefits are anticipated from the act of the last session, authorizing the appointment of commissioners to visit the several tribes west of the Mississippi, and to arrange the various interesting and unsettled questions arising out of the new relations which the system of emigration has created. A majority of these commissioners, it is supposed, is now in that region, engaged in the performance of their duties; but the time which has intervened since their arrival there has been too short to enable them to communicate to the department the progress and prospects of their mission. The accompanying copy of their instructions will show the general nature of their duties and the great importance of an able and faithful discharge of them. These duties embrace the settlement of conflicting claims, the arrangement of disputed boundaries, the juxtaposition of kindred bands, the commutation of permanent for temporary annuities, the reconciliation of hostile tribes, the redemption of the solemn pledge of protection offered by the act of May 28, 1830, the establishment of a system of government over them, and of intercommunication among them; and, generally, the examination and suggestion of any topics calculated to improve their condition, and to enable the government the better to discharge the great moral debt which circumstances and the situation of this helpless race have imposed upon them. Every facility in the power of the Executive has been granted to aid the operations of the commissioners, and it is to be hoped that their report will be full and satisfactory, and that the measures founded upon it will introduce a new era into the history of our Indian intercourse.

In my report of November 21, 1831, I stated it "had been suggested that a considerable portion of the Cherokees were desirous of availing themselves of the provisions of the treaty of May 6, 1828, for their removal." And that "with a view to ascertain this fact, and to afford them the aid offered by that treaty, if they were inclined to accept it, a system of operations had been adopted, and persons appointed to carry it into effect." But that "sufficient time to form a judgment of the result of this measure had not then elapsed."

Under this system about seven hundred Cherokees have claimed the benefit of the treaty of 1828, and have been removed, in conformity with its stipulations, to the country west of the Mississippi. But the operations have, for the present, been suspended. And, until recently, there was reason to hope that their resumption would have been rendered unnecessary by an arrangement for the cession of the whole Cherokee title east of the Mississippi, and for the emigration of that tribe to the country offered for their permanent residence. With this view the liberal propositions authorized by you were made to them, a copy of which is annexed to this report. It will be seen, by reference to it, that the offers were conceived in a spirit of kindness and liberality which justified the expectation of their prompt acceptance. They contained ample security for the permanent establishment of the Cherokees, and for the perpetual occupation of the country allotted to them. They provided the means for their moral, social, and political improvement; and they offered all the pecuniary aid necessary to their present and future subsistence and support. Their acceptance would have terminated the difficulties in which the Cherokees are involved, would have united the dispersed portions of the tribe, and would have laid the foundation of their permanent improvement and prosperity. But it will be seen, by the answer herewith submitted to you, that this effort has been unavailing, and that, unless there is a change in their councils, no favorable change in their condition can be expected.

The Choctaw treaty of 1830 allowed that tribe three years to emigrate. In 1831 about 5,000 of them removed to their new possessions between the Canadian and Red rivers. They are highly gratified with the climate and country, and satisfied with the exchange they have made. From the returns which have been received, it is estimated that about 7,000 more will cross the Mississippi this season, and the residue of the tribe, amounting to about 6,000 will follow during the next.

General Coffee has succeeded in concluding a treaty with the Chickasaws which will lead to their entire removal and to their location in the west. The basis of this treaty is different from any heretofore assumed in our negotiations with the Indians. The whole value of the country ceded is assigned to the Chickasaws, and the United States become, in fact, trustees to make the necessary arrangements for their benefit.

It is stipulated that the ceded territory shall be surveyed and sold, and the whole proceeds, deducting only the actual expenses, applied to the various objects enumerated, connected with the temporary subsistence, removal, and permanent establishment of these Indians. A residuary fund is to be vested in some productive stock, and the income to be annually appropriated for the public and private objects stipulated in the treaty. A country for the residence of the tribe is to be procured by themselves; and it is probable they will be able to make a satisfactory arrangement for that purpose with the Choctaws, a kindred people, who are in possession of a much larger district than is required by their numbers.

No pecuniary benefit will result to the United States from this treaty; but, should it be ratified, it will

constitute an important era in our Indian relations. It will probably lead to the establishment of the principle that, in future cessions of land, the full value shall be secured to the grantors, with such deductions only as may be necessary to carry into effect the objects of the treaties. The advantages to be derived by the United States from these arrangements will be limited to the removal of the Indians from their present unsuitable residences, and to their establishment in a region where we may hope to see them prosperous, contented, and improving. And it cannot be doubted but that a course so consistent with the dictates of justice, and so honorable to the national character, would be approved by public sentiment. Should we hereafter discard all expectation of pecuniary advantage in our purchases from the Indians, and confine ourselves to the great objects of their removal and re-establishment, and take care that the proceeds of the cessions are appropriated and applied to their benefit, and in the most salutary manner, we should go far towards discharging the great moral debt which has come down to us as an inheritance from the earlier periods of our history, and which has been unfortunately increased during successive generations by circumstances beyond our control. The policy would not be less wise than just. The time has passed away, if it ever existed, when a revenue derived from such a source was necessary to the government. The remnant of our aboriginal race may well look for the full value, and that usefully applied, of the remnant of those immense possessions which have passed from them to us, and left few substantial evidences of permanent advantage. One great objection to a removal which has been urged by the more discreet Indians, and by many of our own citizens who are honestly seeking their improvement, is the prospect, judging by the past, that their location west of the Mississippi would be temporary, as they would be soon pressed for new cessions, and would yield, as they have heretofore yielded, to successive applications for this purpose. Although the nature and objects of their removal, and the spirit of the act of Congress which introduced the system, are opposed to such attempts, still the apprehension is entertained, and has proven injurious. Probably no course would better satisfy them upon this subject than the introduction of a principle which would secure to them the full value of the property under all circumstances, thus lessening the probability in their view of any wish on our part to acquire it, and insuring on theirs, if not the power and disposition to retain it, at least the means of converting it to the greatest advantage.

The treaty negotiated with the Creeks in March last is in process of execution. As soon as the census is completed, and the necessary surveys made, each person entitled to land will receive his tract, and he will then be allowed to sell or retain it. If he chooses to sell, the treaty provides him a residence and secures him his just privileges with his countrymen who have crossed the Mississippi. But if he prefer remaining and retaining his land, he becomes a citizen of Alabama, amenable to its laws, and entitled to their protection. All danger of future collision is therefore at an end.

A treaty has been formed with the Seminoles of Florida, upon just and satisfactory terms, by which they cede their possessions in that Territory, and agree to migrate to the region west of the Mississippi. The treaty, however, is not obligatory on their part until a deputation sent by them shall have examined the country proposed for their residence, and until the tribe, upon their report, shall have signified their desire to embrace the terms of the treaty. In conformity with this stipulation, an exploring deputation has proceeded to the Arkansas country for the purpose of examining it, and reporting its adaptation to the objects of Indian life. When they return, the determination of the tribe will be made known to the government; and it is hoped in time to enable the department to submit the treaty to you, that it may be laid before the Senate at the ensuing session.

With the Appalachian bands an arrangement has been made, under the act of Congress of May 23, 1830, for the relinquishment of the largest portion of their claims in Florida, and for their removal. This arrangement is unconditional, and will be immediately executed. And it is confidently anticipated that the small party which has not yet assented to the arrangement will soon accept similar terms for the very limited reservations held by them.

It will thus be seen that with the Creeks, the Choctaws, the Chickasaws, and the principal Appalachian bands, certainly, and with the Seminoles, probably, such arrangements have been made as will prevent the occurrence of any difficulties resulting from the assertion of jurisdiction by the State or territorial governments, on the one hand, and the unfounded claims of exemption from their authority by the Indians, on the other. These tribes embrace all the aboriginal population now remaining in the country east of the Mississippi and south of the Ohio, with the exception of a few individuals, too unimportant for recapitulation, and with the exception, also, of the Cherokees. Of these latter Indians it is computed that about thirty-five hundred reside west of the Mississippi, and about eleven thousand within the chartered limits of Georgia, and in the States of Alabama, Tennessee, and North Carolina. All the embarrassments arising out of the anomalous situation of the Indians which have engaged the public attention, and occasioned much anxiety to the government, are confined in their operation to that portion of this small band living within the State of Georgia. Could they be induced to pursue the only course which promises them stability and prosperity, and to remove to and re-establish in the west their political and social systems, with such modifications as experience and the change of events have rendered necessary, the country might soon look forward to an entire removal of the whole Indian race east of the Mississippi, and to a termination of all those perplexing difficulties which inevitably result from the existing relations established with them.

Treaties of cession and removal have also been formed with the Shawnees, Delawares, Peorias, and Kaskaskias, by which their territorial claims in Missouri and Illinois have been extinguished; and with the Potawatomies for the cession of extensive districts in Illinois and Indiana.

The recent hostilities, commenced by the Sac and Fox Indians, may be traced to causes which have been for some time in operation, and which left little doubt upon the minds of those acquainted with the savage character that they were determined to commit some aggression upon the frontier.

The confederated tribes of the Sacs and Foxes have been long distinguished for their daring spirit of adventure, and for their restless and reckless disposition. At the commencement of the eighteenth century one of these tribes made a desperate attempt to seize the post of Detroit; and, during a period of forty years subsequent to that effort, they caused great trouble and embarrassment to the French colonial government, which was only terminated by a most formidable military expedition, sent by that enterprising people into the then remote regions west of Green Bay.

During the last war with Great Britain this confederacy entered zealously into the contest, and was among the most active and determined of our enemies. After the peace their communication with the Canadian authorities was preserved; and every year large parties of the most influential chiefs and warriors visited Upper Canada and returned laden with presents. That this continued intercourse kept alive feelings of attachment to a foreign power, and weakened the proper and necessary influence of the

United States, is known to every one who has marked the progress of events and the conduct of the Indians upon the northwestern frontier. The tribes upon the Upper Mississippi, particularly the Sacs and Foxes and the Winnebagoes, confident in their position and in their natural courage, and totally ignorant of the vast disproportion between their power and that of the United States, have always been discontented, keeping the frontier in alarm, and continually committing some outrage upon the persons or property of the inhabitants. All this is the result of impulse, and is the necessary and almost inevitable consequence of institutions which make war the great object of life. It is not probable that any Indian seriously bent upon hostilities ever stops to calculate the force of the white man, and to estimate the disastrous consequences which we know must be the result. He is impelled onward in his desperate career by passions which are fostered and encouraged by the whole frame of society; and he is, very probably, stimulated by the predictions of some fanatical leader, who promises him glory, victory, and scalps.

In this state of feeling, and with these incitements to war, the Sacs and Foxes claimed the right of occupying a part of the country upon Rock river, even after it had been sold to the citizens of the United States and settled by them. In 1829, and in 1830, serious difficulties resulted from their efforts to establish themselves in that section, and frequent collisions with the inhabitants were the consequence. Representations were made to them, and every effort short of actual hostilities used by the proper officers to induce them to abandon these unfounded pretensions, and to confine themselves to their own country on the west side of the Mississippi river. These efforts were successful with the well disposed portion of the tribes, but were wholly unavailing with the band known by the name of the "British party." In 1831 their aggressions were so serious, and the attitude they assumed so formidable, that a considerable detachment of the army and of the militia of Illinois was called into the field; and the disaffected Indians, alarmed by the preparation for their chastisement, agreed to reside and hunt "upon their own lands west of the Mississippi river;" and that they would not "recross this river to the usual place of their residence, nor to any part of their old hunting grounds east of the Mississippi, without the express permission of the President of the United States or the governor of the State of Illinois."

This arrangement had scarcely been concluded before a flagrant outrage was committed by a party of these Indians upon a band of friendly Menomonies, almost under the guns of Fort Crawford. Twenty-five persons were wantonly murdered and many wounded while encamped in the village of Prairie du Chien, and resting in fancied security upon our soil and under our flag. If an act like this had been suffered to pass unnoticed and unpunished a war between these tribes would have been the consequence, in which our frontiers would have been involved, and the character and influence of the government would have been lost in the opinion of the Indians.

Apprehensive, from the course of events already stated, and from other circumstances, that the disaffected band of Sacs and Foxes would again harass and disturb the settlements upon our borders, and determined that the murderers of the Menomonies should be surrendered or taken, the department ordered General Atkinson, on the 7th of March last, to ascend the Mississippi with the disposable regular troops at Jefferson barracks, and to carry into effect the instructions issued by your direction. Still further to strengthen the frontiers, orders were given for the reoccupation of Chicago.

The demand for the surrender of the Menomonic murderers was entirely disregarded; and the "British party" of the Sacs and Foxes recrossed the Mississippi, and, assuming a hostile attitude, established themselves upon Rock river. The subsequent events are well known and the result has already been stated in this report.

To Major General Scott and Governor Reynolds, of Illinois, was assigned the task of pacification; and by their joint exertions treaties of cession were formed with the Winnebagoes, and with the Sacs and Foxes, by which the title of the former is extinguished to all the country south of the Wisconsin and east of the Mississippi, and the title of the latter to an extensive region west of this river.

These cessions are highly important to the peace and security of that frontier, and will soon be followed by such settlements as will place it beyond all danger of Indian hostilities. And it is to be earnestly hoped that the severe lesson which the events of the late campaign have taught the Indians will insure the preservation of tranquility, and render a resort to similar measures on the part of the United States unnecessary.

The removal of a number of the tribes, and other changes which are taking place in our Indian relations, have enabled you to direct the discontinuance of several of the agencies, and a considerable reduction in the expenditures of the Indian department. The agencies of Michilimackinac and the Sault Ste. Marie have been consolidated, and those of the Ohio Indians, of the eastern Choctaws, and of the eastern Creeks, have been limited to the 31st of December next, after which they will be discontinued. A corresponding reduction has been made in the expenditures, amounting, as the estimates will show, to the annual sum of twelve thousand seven hundred and fifty dollars in the ordinary operations of that branch of the public service. The progress of the system of emigration will enable the department to carry into effect your instructions with relation to a further diminution of these expenses, and no opportunity will be omitted consistently with the public interest to accomplish this desirable object.

The important duties imposed upon the department by the act of Congress of June 7, 1832, entitled "An act supplementary to the 'Act for the relief of certain surviving officers and soldiers of the revolution,'" have been executed as far as possible. As will be seen by a report of the officer in charge of the Pension bureau, upwards of twenty thousand applications have been presented under that act. Of these more than six thousand have been examined, and have been admitted, rejected, or returned for supplementary action. The number of cases so far exceeded the anticipations which had been formed, that the strength of the office was wholly inadequate to a prompt examination of them, and a system of procedure was therefore adopted, involving some additional expense, to meet which, it is hoped, an appropriation will be made, but calculated greatly to facilitate the execution of the business. Additional clerks were employed, and a division of labor was established among them, by which each case could be thoroughly examined, and a brief analysis submitted in a prescribed form. By assigning to particular persons the duty of deciding whether these condensed statements present such claims as come within the established regulations, every reasonable facility, compatible with a proper investigation, is given to the progress of the business, and yet the important action upon the whole is intrusted only to five principal clerks in the bureau, who, from their experience, or other qualifications, are fully competent to the discharge of this duty, and who act under the more immediate direction of the faithful officer who has so long presided over the Pension bureau.

It is certainly very desirable that all these claims should be investigated and decided with the least

possible delay. The bounty or the justice of their country has come late enough to the remnant of that heroic band who laid the foundations of our national prosperity, without the occurrence of further unnecessary delay in the administration of the law; and I have felt it my duty to cause the most prompt and vigorous measures within the reach of the department to be taken in order to effect this object.

Still, a just regard to the public interest, and the exercise of proper precautions to guard against fraudulent claims, necessarily interpose delays in the management of this business which, without a knowledge of the circumstances, may have appeared unreasonable. But they are not so. They could not and cannot be avoided. The regulations adopted to give effect to the act, and reported at the last session to the pension committees of both houses, proceeded, in some measure, upon new principles, in the system of evidence required to be submitted. It was manifest that if the plan adopted with great propriety fourteen years ago, when the first pension act was passed, were adhered to in all cases arising under the recent law, but few would be found who could claim its benefits. Since that period death has reduced the numbers of the revolutionary patriots, and advanced age and infirmity have enfeebled the powers of the survivors. Direct positive evidence, therefore, of identity and service cannot be procured in many cases, nor without difficulty in scarcely any. In this state of things, and where no documentary evidence exists, (and this has been preserved in but few of the States,) the applicant is allowed to state, in detail, the nature, extent, and duration of his service, and all the important facts connected with it, which he can recollect. The regulations prescribe the general mode in which this declaration must be made, and the questions to be put to the applicant. The proceeding must take place before some court of record, except in cases of peculiar infirmity; and the favorable opinion of the court is indispensable to the success of the application. The declaration must also be corroborated by the testimony of respectable individuals acquainted with the applicant, and bearing evidence to the traditionary belief of his revolutionary services, in the neighborhood where he has resided.

It is obvious that the mere preparation and transmission of these papers ought not to entitle the party to the relief he seeks. If it did, great frauds would be practiced. The general form of the proceedings is an important auxiliary in that administration of these duties, but it is not all, nor is it indeed the principal element in the process of investigation. The narrative of the applicant, referring to the names of officers; to the numbers and stations of regiments and corps, and to marches, battles, and other historical events, is carefully examined and compared with the records in the department, and with such facts connected with the revolutionary annals as have been collected during a series of many years of constant labor and attention in the Pension office. It is believed that this course of investigation and comparison is as free from objection as any plan which could have been adopted, and that a just medium has been preserved between that severity of administration which would have rendered nugatory the provisions of the law, and that laxity which would have opened the treasury to false and fraudulent claims.

But the labor of investigation which this course of proceeding imposes upon the department is apparent, and it is without remedy. An appropriation is requested, in order to increase the number of clerks, as far as is prudent and compatible with a safe execution of the law. Should this be granted, the whole subject will be disposed of with as little delay as possible, agreeably to the intentions of the legislature, and to the expectations of the country.

Very respectfully, sir, I have the honor to be your obedient servant,

LEWIS CASS.

The President of the United States.

WAR DEPARTMENT, July 14, 1832.

GENTLEMEN: You will receive herewith a commission appointing you to visit and examine the country set apart for the emigrating Indians west of the Mississippi, a copy of the law authorizing the appointment, and a map of the country referred to. To one of you will also be sent a volume of Indian laws and treaties.

You will please to notify the department, without delay, of the acceptance or non-acceptance of this appointment; and, if you accept, you will proceed to Fort Gibson, on the Arkansas, and reach that place by the 1st of October, at which period your duties will commence.

You will make yourselves acquainted with the claims of the western Creeks and Cherokees. The principal men of these tribes you will call together. On investigation, it will be found that there are interfering claims arising under the treaties with them, and from the settlements they have made, without a previous adjustment of their respective boundaries, which can best be accommodated by procuring the assent of these parties. The nature and ground of these claims I need not state here, as you will better understand them by an examination of the treaties and the explanations of the parties. It is the wish of the President that the subject should be satisfactorily arranged, if possible; and this will best be done by a full and public investigation of the whole matter, and by inducing both Creeks and Cherokees to yield some part of their conflicting claims. I feel confident that the country extending from the Red river north of the reservation called the Perpetual Outlet, and bounded on the east by the Territory of Arkansas, and on the west by the Mexican line, is amply sufficient for all the Creeks and Cherokees in the United States. The Indians generally have a very incorrect idea of the superficial extent of a country, or of the quantity of land required for their subsistence, and I am apprehensive that there are among both of these tribes individuals who endeavor to take advantage of this ignorance, and to induce the Indians to ask much more than is necessary. This effort you will strive to counteract, and, by candid explanations, to satisfy the Indians upon this subject. There are probably 20,000 Creeks in Alabama, 4,000 Seminoles in Florida who are connected by consanguinity and manners with the Creeks, and about 10,000 Cherokees in Georgia, Alabama, Tennessee, and North Carolina, who are yet to emigrate. It is the intention of the government that the different parts of the same tribe should be united together in their new country, so that the Creeks and Cherokees should each form but one people. You will keep this object in view, and make it the basis of your operations with these Indians.

The Chickasaws, amounting to about 4,000, are yet to emigrate; but the site of their location is not determined upon, though it is believed an agreement will be made with the Choctaws for the reception of all the Chickasaws among them in the country assigned to the former, between the Red river and the Canadian. Still, the attempt may fail, and therefore it becomes necessary, in your permanent arrangements, to have in view a proper site for the eventual location of the Chickasaws

* A deputation from the Seminoles will probably visit the country west of the Mississippi during the present season, and while you are there. They have ceded their possessions in Florida upon the condition that a suitable country can be found for their residence in the tract set apart for the emigrating Indians. The person in charge of them will be instructed to conduct the delegation to you, and their satisfactory establishment will form one of the objects committed to you.

The Ohio Indians, with the exception of the Wyandots, amounting probably to near 1,500 persons, are under treaty stipulations to emigrate this fall. It is not known that any difficulty will occur in their establishment, as their places of residence are fixed in the treaties. Should, however, any dissatisfaction arise, you will investigate the subject, and make the best arrangement you can to dispel it. There are probably yet about 500 Indians in Ohio who will ere long remove. You will point out also a proper place for their establishment near their kindred tribes.

There may be, perhaps, 1,500 Indians—possibly 2,000—in Indiana, Illinois, and Michigan, who are yet to emigrate. Provision has been made at the present session of Congress for holding a treaty with them, and for procuring their removal. The commissioners authorized to conduct this negotiation have been instructed to stipulate that the government will furnish them with a suitable and sufficiently extensive country for their residence, to be selected under the direction of the President. That this stipulation may be carried into effect, should it be made, you will point out a place for their location. Those commissioners have been further instructed, if these Indians are unwilling to cede their possessions without a previous examination of the country, to make with them a conditional arrangement, allowing them to proceed to the region west of the Mississippi, and to satisfy themselves concerning its advantages, leaving the treaty to become absolute should they eventually report favorably. If a deputation for this purpose should arrive while you are in the performance of your duties, you will endeavor to make a selection for them which will be agreeable.

A treaty will also be held with the Kickapoos, Shawnees, and Delawares, of Missouri, and with the Piankeshaws, Weas, Peorias, and Kaskaskias, of Illinois, for the cession of their lands in these States respectively. The commissioners appointed to hold this treaty will be directed so to provide for the location of these Indians, in the event of a successful issue to their negotiation, as to interfere as little as possible with the various important subjects committed to you. General Clark, who will be one of them, has a perfect knowledge of all the affairs relating to the Indians, and the government has great confidence in his experience and judgment. He will be requested to correspond with you, and to give you the benefit of his views. A copy of your instructions will be sent to him.

These constitute all the tribes or portions of tribes for whom it is necessary to make provision in the district assigned for the permanent residence of the Indians.

You will perceive that the general object is to locate them all in as favorable positions as possible, in districts sufficiently fertile, salubrious, and extensive, and with boundaries, either natural or artificial, so clearly defined as to preclude the possibility of dispute. There is country enough for all, and more than all; and the President is anxious that full justice should be done to each, and every measure adopted be as much to their satisfaction as is compatible with the nature of such an arrangement.

With a view not only to make room for the adjustment of existing difficulties, and for the location of some of the tribes who are yet to emigrate, but also to bring together bands which are connected by language and habits, I consider it expedient to effect a removal of the Osage Indians from their present reservation to a district adjoining the Kansas.

You will open a negotiation for that purpose, and endeavor to procure an exchange upon reasonable terms. By the 5th article of the treaty concluded with the Osages June 2, 1825, certain reservations were granted to the individuals therein mentioned. As these reservations interfere with the permanent location of the Indians, and as complaints upon that subject have already been made, it is desirable to extinguish the titles thus created. You will therefore endeavor to obtain the assent, for a reasonable consideration, of these persons to a transfer of their claims to the United States.

Should the Osages require it, you can make provision for carrying into effect the arrangement authorized to be made by General Clark, with the sanction of this department, for the removal of the Hopfield band, and for the payment of their improvements. Copies of the papers relating to this matter are enclosed.

It is an important object with the government to establish a permanent peace among all the tribes, indigenous or emigrant, west of the Mississippi. The fear of hostilities arises from the habits and dispositions of the Panis, Comanches, and their kindred tribes. It is impossible for the department, with the information before it, to point out the best mode in which these tribes can be approached, and a final termination put to their hostile and predatory incursions. The whole subject is referred to you. You will take the best measures to effect the object, after having procured all the necessary information. I consider this among the most important subjects committed to you. By the act of May 28, 1830, the government has guaranteed protection to all emigrating Indians, and the pledge thus given can only be redeemed by the employment of a sufficient protecting force, or by inducing all these tribes to live in amity with one another. This latter course is, in every point of view, the most advisable.

In any negotiation you may find it necessary to form with the Indians, the stipulations you may make will not be absolute, but will depend upon the final ratification of the Senate.

In the execution of the duty, respecting a plan for the government and security of the Indians, you will report in detail all the information you can procure concerning their present and probable future condition which can be useful in the determination of the questions of their government and intercourse. Your own judgment, aided by such information as may be afforded you upon the spot, must guide you in your views of this matter. Its importance is apparent, as on its decision may rest the future fate of all these tribes; and, in the great change we are now urging them to make, it is desirable that all their political relations, as well among themselves as with us, should be established upon a permanent basis, beyond the necessity of any future alteration. Your report upon this branch of the subject will be laid before Congress, and will probably become the foundation of a system of legislation for these Indians.

I do not observe, in examining the act providing for your appointment, that there are any other clauses requiring particular remarks. The general objects of the law are plain, and I trust you will find no difficulty in carrying them into effect.

The great question of Indian education is one which has produced much diversity of sentiment. I am anxious you should investigate the subject thoroughly, and report your opinion thereon, together with any plan which may occur to you for the instruction and improvement of the tribes. In addition to this, it is desirable you should examine the amount of the funds which, by treaty stipulations, are applicable

to the purposes of education, and report the best mode in which they can be expended. A general and practicable plan for the accomplishment of this object is very much needed.

You will also ascertain whether any of these tribes are desirous of commuting their permanent annuities for a limited one—say not exceeding twenty years in duration. It is desirable to carry this measure into effect, if practicable, and if it can be accomplished without injury to the Indians. It appears to me that after they have commenced their agricultural operations, larger payments than are now made to them will be useful in clearing land and making improvements, and would soon enable them to support themselves comfortably; and I believe that this process would improve their condition more than the annual division of small sums among them for an indefinite period. The latter practice is injurious, as well in consequence of the mode in which the money is generally applied as by preventing the Indians from depending upon their own exertions.

I enclose you copies of communications from General Clark respecting a claim of the Panis to a tract of country which has been assigned to the Delawares. This subject you will investigate; and if you find the Panis claim correct, you will endeavor to make such an arrangement as will be satisfactory to them. The suggestions of Major Dougherty are entitled to weight, and the plan proposed by him is referred for your consideration. The measure intimated by Major Cummings, of concentrating the Delaware Indians, is also worthy of your notice. It is important, in the permanent establishment of the Indians, that the tribes should not be broken into fragments, but that the portions of each should be brought together. Your particular attention is requested to the existing difficulties between the Delawares and the Panis.

A part of the mounted rangers recently authorized to be raised by an act of Congress will be ordered to repair to Fort Gibson to attend you in the execution of your duties; and the commanding officer at that post will be directed to comply with any requisitions you may make upon him with respect to the distribution of the troops and the furnishing of such facilities as you may require during your continuance in the country.

The government has for some time had it in contemplation to display a force, and particularly a mounted one, in that region. Such a measure cannot but be useful; the impression it will make will be salutary and permanent.

The assistant commissary at Fort Gibson will be directed to issue such supplies of provisions to the Indians as you may demand; but it is not thought that these need be very extensive, as it will not be expedient to collect the Indians from a considerable distance at that point.

General Clark, superintendent of Indian affairs at St. Louis, and the different Indian agents upon that frontier, have been instructed to afford such aid as you may require and they can render towards the accomplishment of your mission.

Your compensation will be eight dollars a day for every day employed upon this business, excepting, however, the time engaged in travelling, during which you will be allowed eight dollars for every twenty miles of travel. A secretary will be appointed—five dollars a day will be allowed for his services, and five dollars for every twenty miles of travel. These accounts will be adjusted upon your vouchers stating the time and distance, and certified by you to be correct.

Should you find it necessary to purchase provisions or presents for the Indians, you will take bills of parcels therefor, regularly receipted, and you will accompany them with certified abstracts showing the distribution of the property purchased.

Enclosed you will receive a copy of the regulations which have been recently adopted. So far as these regulations apply in the execution of your duties you will please to observe them.

You can employ such interpreters and other persons to aid you as you may find necessary.

You may draw upon the department to the amount appropriated by law, but your expenditures, including your own compensation, will in no event exceed that sum.

You will keep a full journal of your proceedings, in which you will enter all your speeches, messages, and addresses to the Indians, and their answers to you.

From the information before me, I am inclined to think "the Perpetual Outlet," as such, useless; and that, in your arrangements, it will be expedient to include the reservation, so called, in the tract you may assign to one of the tribes, the consent of the Indians interested in the outlet being first obtained.

You will please to examine the condition of the several agencies you may visit, and report whether any reduction of the number of officers, or of the amount of expenses be, in your judgment, practicable.

If you have opportunity, you will also please to inspect the schools established on the funds of the government, and report a plan of management and instructions, and such improvements as may occur to you.

A number of medals and flags, for Indian chiefs and warriors, will be sent to the assistant commissary at Fort Gibson, to be placed at your disposal.

Colonel A. P. Chouteau has been for many years a resident in the Indian country, and is intimately and extensively acquainted with the condition of the tribes, their mutual relations and habits, and the government places great reliance in his integrity and general intelligence. I therefore recommend to you, on your arrival at the scene of your operations, to consult freely with him, and to avail yourself of the information he possesses and will cheerfully communicate. He has been written to upon this subject.

I have the honor to be, &c.,

LEWIS CASS.

Their Excellencies WILLIAM CARROLL, MONTFORD STOKES, and ROBERTS VAUX, Esq.

DEPARTMENT OF WAR, April 17, 1832.

To the Cherokees east of the Mississippi:

MY FRIENDS: Your great father, the President of the United States, has recently been informed that a change has probably taken place in the sentiments you have heretofore entertained on the subject of a removal to the country west of the Mississippi, and that propositions from the government, having that object in view, would be favorably received by you. Satisfied, as the President is, that this measure can alone secure to you permanent prosperity, and lay the solid foundations of your future improvement and civilization; and prepared, as he has always been, to make you offers which shall be not only just, but

liberal, he has instructed me to address you upon this subject, and to make known to you the stipulations he is willing to grant, so far as his authority extends. I have therefore to request that you will take the matter into your serious consideration, and communicate to me your ultimate decision.

The President is willing to enter into an arrangement for your removal west of the Mississippi, upon the following general principles:

1. That a country, sufficiently extensive and fertile, shall be distinctly marked out west of the Territory of Arkansas, for you and your brethren, where they now are.

2. That this country shall be conveyed to you by patent, under the provisions of the act of Congress of May 28, 1830, and that it shall be forever without the boundary of any State or Territory.

3. That you shall have all the powers of self-government, so far as may be compatible with that general supervisory authority which it is necessary Congress should exercise over you.

4. That you shall have the privilege of appointing an agent, who shall reside at Washington, to communicate to the government your claims and wishes, and who shall be paid by the United States.

5. That, if Congress assent to the measure, you shall be allowed a delegate to that body; and shall also, when your improvement and other circumstances will permit, and when Congress think proper, be placed in the relation of a Territory.

6. That all white persons, unless specially authorized by the laws of the United States, shall be excluded from your country.

7. That you shall remove to your new country at the expense of the United States, in either of the following modes you may prefer: First, by a commutation to be allowed to individuals or families.^d Second, by persons to be appointed and paid by the United States. Third, by an arrangement to be made among yourselves, by which some of those who are competent to the undertaking may remove all your people at a rate to be fixed.

8. That subsistence shall be provided by the United States for the term of one year after you reach your destination.

9. That an annuity, proportioned to the value of the cession you may make, be secured to you.

10. That all the improvements upon the ceded Territory, which add real value to the land, be appraised and paid for.

11. That ample provision be made for the support of schools and teachers; and of blacksmiths, &c., for the supply of steel and iron; and for the erection of mills, school-houses, churches, council-houses, and houses for a few of your principal chiefs.

12. That a rifle and equipments be given to each male adult; that a quantity of blankets be allowed to your families, together with axes, ploughs, hoes, wheels, cards and looms.

13. That your stock be valued and paid for by the United States.

14. That the annuities due to you by former treaties be paid to you west of the Mississippi.

15. That provision be made for your orphan children.

16. That protection be guaranteed to you against the hostile efforts of any other Indians.

17. It is the wish of the President that all your people should remove, and he is therefore unwilling that any reservations of land should be made in the ceded territory. Still, he would not make this an indispensable condition, but would agree, should it be found necessary, that reservations should be made for a few of your people in situations and under circumstances rendering such a measure proper and within the scope of his legal authority. But your people must distinctly understand that those who remain will become citizens of the State in which they may reside, and that all the relations between them and the United States, founded upon their previous circumstances as Indians, must cease.

These are the general terms I have been directed by the President to offer to you. They form the outline of an arrangement which can be filled up when you are prepared to enter into a negotiation. The details and any other stipulation you may ask will more properly be discussed and determined when your views of the matter are known and the ultimate mode of proceeding adopted.

If you are prepared to assume these propositions as the basis of a negotiation, you can appoint your agents to come on to this place clothed with authority to act, or the President will appoint commissioners to meet you in council, and to conclude the affair.

I cannot but hope that you will see, in this frank and liberal offer, full evidence of the desire of the President that the difficulty of your present situation may be removed, and your future destiny placed beyond the reach of those causes which have occasioned such misery to the Indian race.

Shut your ears, I entreat you, to bad counsels, if any such should be offered to you. Whatever may be told you, it is impossible you can remain where you now are and prosper; and if you persist in the effort, the time of regret will come, but will come, I am afraid, after the most serious injury to yourselves.

Your friend,

LEWIS CASS.

IN GENERAL COUNCIL, CONVENED AT RED CLAY, *Cherokee Nation*, August 6, 1832.

SIR: Your letter bearing date the 17th of April last, containing certain propositions as to the general terms upon which the President is willing to treat with this nation, has been received through the hands of Elisha W. Chester, esq. It is with much astonishment we learn from this letter the President has been informed that a change had probably taken place in the sentiments this nation heretofore entertained on the subject of a removal to the country west of the Mississippi, and that propositions from the government, having that object in view, would be favorably received.

The subject-matter has been fully considered, together with the peculiar embarrassments that now surround us, and, in compliance with your request, we proceed to communicate our reply.

In the first place, we wish to call your attention to the decisions of the nation on former occasions on this subject, and to inform the President that the true sentiments of the Cherokee people remain the same; that the basis of his propositions is objectionable; and that the nation is placed in duress from the illegal proceedings of Georgia in assuming to exercise jurisdiction over a large portion of our territory, and by placing a military force, with other officers of her own creating, in our country for the purpose of oppressing our citizens. She has also introduced a great many of her citizens among us to intrude on our lands; and, further, she has surveyed those lands and vested in her chief magistrate the power of drawing a lottery for the occupation of them. And, in this peculiar state of things, the protecting arm

of the President is withheld from the enforcement of the treaties and laws of the United States made for the protection of our national rights. And, moreover, divers agents of the general government have been commissioned for the purpose of enlisting our citizens as emigrants for the country west of the Mississippi, and in the prosecution of this business some of them have been seduced under circumstances calculated to create disquietude and disagreeable feelings. But let the President remove all the difficulty arising from these unjust measures, and afford us that necessary protection which is solemnly guaranteed to us by treaties, and then the exercise of that privilege which is so essential to the enjoyment of freedom would place us at liberty to reflect, speak, and act freely on the subject of our national interest and welfare.

In conclusion, we would respectfully call your attention to the frequent complaints which have been made to the department against the numerous intrusions on our lands bordering on the boundaries of the several adjoining States, and to urge the removal of the intruders.

Very respectfully, your friends and obedient servants,

RICHARD TAYLOR, *President of the Committee.*

Hon. LEWIS CASS, *Secretary of War.*

No. 1.

REPORT FROM THE MAJOR GENERAL OF THE ARMY.

HEADQUARTERS OF THE ARMY, *Washington, November, 1832.*

SIR: I present herewith, in conformity with your instructions of the 2d of August, the following returns of the army, and statements connected with the military service for the present year.

1. A statement showing the organization of the army, marked A.
2. A return of the actual state of the army, marked B.
3. A return exhibiting the strength of the eastern department, designating the posts and garrisons, marked C.
4. A return exhibiting the strength of the western department, designating the posts and garrisons, marked D.
5. A statement showing the number of recruits enlisted in the army from January 1 to September 30, 1832, marked E.
6. An estimate of the funds required for the recruiting service for the year 1833, marked F.
7. An estimate of the contingent expenses of the headquarters of the army, including those of the office of the Adjutant General, for the year 1833, marked G.

In the month of March last, intelligence was received that the Menomonees, exasperated by a wanton and unprovoked attack and murder committed by the Sacs and Foxes on an unarmed party of their tribe, near the Prairie du Chien, in the month of August previous, meditated a descent on those tribes, with the intention of taking revenge for that outrage. Apprehending that this movement would lead to a general war among the Indians on the northwestern frontiers, General Atkinson was directed to proceed to Rock Island with the effectual force at Jefferson barracks, and demand of the Sacs and Foxes the surrender of the persons concerned in the murder of the Menomonees; at the same time to station troops, to be drawn from the posts on the Upper Mississippi and from Fort Winnebago, at points on the Mississippi, from which they might intercept the Menomonees in their contemplated descent, turn them back, and inform them that the government had determined to see that justice should be done. While these measures were in progress a large party of Sacs and Foxes under Black Hawk, among whom were those concerned in the attack and murder of the Menomonees, crossed the Mississippi at the Yellow Banks, and, uniting with the Prophet's band of Winnebagoes, in all about 800 or 1,000 strong, took a position on Rock river, and assumed an attitude of defiance. Under these circumstances it was not in the power of the friendly Sac and Fox Indians to surrender the murderers as demanded, although they had expressed a willingness so to do. Thus situated, General Atkinson did not conceive that the force under his command was sufficient to justify him in attacking the hostile party, lest an unsuccessful attempt should add to their numbers the wavering and disaffected, and especially as they had not as yet committed any act of hostility, although they evinced a desire to make war upon the whites.

The people settled on the frontiers of Illinois, alarmed at the appearance of so large a band of Indians in their immediate vicinity, with indications of no friendly feelings, fled from their farms into the interior

of the State. The governor of the State ordered out in haste, and for no definite period, a brigade of militia, to assemble on Rock river. These troops, after a march across the country to Ottawa in quest of the Indians, became anxious for their discharge, which the governor granted, retaining of those who were discharged, and volunteered for a further term of twenty days, enough to form six companies. In the meantime, however, instructions were sent to General Atkinson, authorizing him to call on the governor of Illinois for such a militia force as would, with the regular troops under his command, enable him to act efficiently. Accordingly, three thousand mounted volunteers were ordered into the field by the governor, on the requisition of General Atkinson, and assembled at Fort Deposit, near Ottawa, about the 18th of June, where they were organized. Towards the latter part of that month the campaign was opened with these troops and about four hundred regulars, then at Dixon's Ferry, on the Rock river. Black Hawk, finding himself unable to cope with so large a force, retired into the swamps and fastnesses, sending out at the same time parties of active warriors to pick up stragglers, and to attack defenceless settlements. In this manner he annoyed the people residing in that part of Michigan called the Mining District, and murdered a number of our citizens, men, women, and children. The people, in different directions of the exposed country, fortified themselves, and by occasional sallies inflicted punishment on these ruthless savages. With a view to cover the exposed settlements in the counties of Jo Daviess, in Illinois, and Iowa, in Michigan, and to intercept the Indians, should they attempt to cross in that direction, General Atkinson detached one brigade into that country; and, with the remaining force under his command, consisting of four hundred and fifty regulars and about two thousand mounted volunteers, moved in the direction of the Four Lakes in pursuit of the main body of the Indians, which was then understood to be encamped in a strong position in the swamps, about ten miles above Lake Goosh-we-hawn. General Atkinson halted his army on White Water creek for the purpose of ascertaining the exact position of the Indians. After being frustrated in his attempts to discover them, he was obliged to disperse his mounted volunteers on account of the low state of the supplies intended for their subsistence. One portion, under General Henry, was sent to Hamilton's, a distance of forty-five miles; and another, under General Dodge, to Fort Winnebago, a distance of thirty-five miles—two points where provisions were expected to be in deposit. Having received the supply of provisions, Generals Henry and Dodge returned to the swamp, on the west side of Rock river, with a view of obtaining some information concerning the enemy. At the same time General Atkinson, with the regular troops, and General Alexander's brigade of mounted volunteers, moved up on the east side of the swamp with the same intention. Black Hawk, finding himself likely to be pressed on all sides, and being no longer able to supply himself with the means of subsistence, broke up his camp and marched towards the Mississippi. The volunteers under Generals Dodge and Henry, discovering the enemy's trail, pursued it, and came up with him on the 21st of July, on the left bank of the Wisconsin, about twenty miles below Fort Winnebago, where an engagement ensued, which lasted until 7 o'clock in the afternoon, during which the Indians found means to convey across the Wisconsin their non-combatants and baggage. The volunteers having marched forty miles on the day of the action, exposed to the rain for more than six hours, and their arms being wet and out of order, were not in a condition to continue the pursuit that night. The next morning they found that the Indians had crossed the river in bark canoes, which they had on the emergency of the occasion prepared. The loss on the part of the volunteers was one killed and seven wounded; that of the Indians, it was found afterwards, amounted to sixty-eight killed, together with a large number wounded.

The moment General Atkinson was informed that the volunteers were on the trail of the enemy he marched in pursuit, and arrived at the Blue Mounds, near the Wisconsin, where he was joined on the evening of the 23d of July by the volunteers under Generals Dodge and Henry, who had retired to that place for a supply of provisions. The army being refreshed and provisioned, a select body, consisting of four hundred regulars under Colonel Taylor, of the first regiment of infantry, and detachments of Generals Henry, Dodge, Posey, and Alexander's mounted volunteers, amounting in all to thirteen hundred men, crossed the Wisconsin on the 27th and 28th of July under General Atkinson, took up the trail of the enemy, and pursued it by forced marches through a broken and difficult country until the morning of the 2d of August, when they came up with the main body on the left bank of the Mississippi, opposite the mouth of the Iowa, which they attacked, defeated, and dispersed, with a loss on the part of the Indians of upwards of one hundred and fifty men killed. Many were slain in attempting to cross the river; others escaped in that direction; while the remainder, among whom was Black Hawk, fled into the interior of the Winnebago country. Our loss in this engagement was comparatively small, being only five regulars killed and four wounded; of the volunteers, two officers and thirteen privates wounded.

On information being received by General Atkinson that the Indians had quitted the swamps in the neighborhood of the Four Lakes and marched towards the Mississippi, he despatched instructions to the commanding officer of Prairie du Chien to take measures to intercept them, should they attempt to descend the Wisconsin or cross the Mississippi. In consequence of these instructions a guard and an armed flat were stationed on the Wisconsin about twenty-five miles from its junction with the Mississippi; by which means a number of those who escaped from the engagement on the Wisconsin were killed or captured. A steamboat in the employ of the quartermaster's department, armed with a field piece, and manned with about twenty men, was despatched up the Mississippi to watch the motions of the Indians, and on the 1st of August discovered a large body of them on the left bank making preparations to cross the river. The Indians at first attempted to deceive our party by declaring themselves to be Winnebagoes, and displaying white flags, at the same time inviting them to land. But the officer in command being aware of their intentions fired upon them, and killed twenty-five of their number. The fire was smartly returned by the Indians, but without effect. This circumstance fortunately checked the Indians in their attempt to cross the river, and led to the action of the 2d of August.

The enemy being thus cut up and dispersed, General Atkinson conceived it unnecessary to pursue him further. He, therefore, fell down with his force to Prairie du Chien; from which place were despatched, on both sides of the Mississippi, parties of friendly Indians to follow the fugitives and bring them in; and it is believed that not an individual composing the band of Black Hawk has escaped being either killed or captured.

From the information which had been received at the seat of Government of the state of things on frontier, and with the desire of putting a speedy termination to the war, without calling for any additional militia force, orders were given on the 16th of June for all the force that could be spared from the seaboard, the lakes, and the Lower Mississippi, to repair at once to the scene of action, and Major General Scott was directed to assume the general conduct of the war. Under this order, nine companies of artillery, equipped as infantry, drawn from Forts Monroe and McHenry, and from the harbor of New York,

with a detachment of two hundred and eight recruits from the last-mentioned place, and nine companies of infantry from the posts on the lakes, amounting in all to upwards of one thousand men, took up their march for Chicago, near the head of Lake Michigan, the point of rendezvous. Besides this force, two companies of infantry from Baton Rouge, Louisiana, proceeded, by the way of the Mississippi, to the headquarters of General Atkinson.

From the promptness with which this movement was begun, and the rapidity with which it was conducted, reasonable hopes were entertained that the campaign would be of but short duration, and the hostile Indians completely subdued. Unfortunately, however, the cholera was just at this time making its way into the United States from Canada, and infected our troops while on board the steamboats in their passage up the lakes; and such was the rapidity with which this disease spread among them, that in a few days the whole of the force sent by the lakes was rendered incapable of taking the field. Some were landed at Fort Gratiot, others were stopped at Detroit, while the principal part reached Chicago in a most deplorable condition. Of the six companies of artillery which left Fort Monroe, five companies arrived at Chicago, a distance of eighteen hundred miles, in the short space of eighteen days—a rapidity which is believed to be unprecedented in military movements. The loss by cholera in that detachment alone was equal to one out of every three men. General Scott reached Chicago with the first detachment on the 10th of July, where he learned that General Atkinson, with his army, was at Lake Goosh-we-hawn, about eighty miles distant. Here the general found himself in a most perplexing predicament; only a part of his troops had arrived, and they dreadfully afflicted with the cholera. The remainder, which he daily expected, without knowing the cause of their delay, did not appear. He made General Atkinson acquainted with his arrival and orders, but dared not approach him with troops infected with a disorder that might, by being communicated to the army in the field, render the force of General Atkinson, like his own, unfit to prosecute the war, and thereby defeat the very object for the accomplishment of which he had come. Under this painful anxiety, General Scott directed General Atkinson to continue his operations without reference to him, professing, at the same time, the greatest confidence in his ability to bring the war to a successful issue, if the means at his disposal would enable him to do so. General Scott, however, after waiting a reasonable time, and not finding it possible to bring his troops into the field, left Colonel Eustis in command of them, with orders to march in the direction of the enemy as soon as it would be prudent to move, and proceeded himself to join General Atkinson. At Galena he received intelligence of the decisive action of the 2d of August. He thence proceeded to Prairie du Chien, and having made all the necessary arrangements for bringing the Indians who had commenced the war within his power, he retired to Rock Island to enter into negotiations with those of the Sac and Fox Indians, who took no part in the war, and the other tribes interested in the settlement of a peace. The troops under Colonel Eustis, in the meantime, marched across the country to Rock river, and were useful in making the necessary arrangements to give effect to the meeting of the Indians. Impressed with the folly of opposing the government, and convinced of the impropriety of the conduct of those who were the aggressors, the several tribes yielded to an accommodation, at once beneficial to themselves, and satisfactory, it is to be hoped, to the United States. Black Hawk and a number of chiefs are held as hostages under the treaty; the rest of the prisoners were returned to their respective tribes.

The war being concluded, the volunteers were discharged, and the several detachments of regular troops were ordered to their respective quarters, except two companies of the 4th regiment of artillery, which remain to garrison Fort Gratiot, on Lake Huron.

The corps of mounted rangers, authorized by the act of Congress of the 15th of June, 1832, has been raised, but not in time to partake of the campaign against the Indians. Three of the companies have been ordered to Fort Gibson to range the southwestern frontier, where the Indians of the interior have been restless for some time, and disposed to quarrel with those who have migrated thither. One company has accompanied the caravan to Santa Fé as an escort, and two companies, after ranging the frontiers of Michigan and Illinois, have orders to retire into quarters for the winter, where they will be in a position to act on those frontiers, if circumstances should require their being called out before the spring.

On the requisition of the governor of North Carolina two companies of the 2d regiment of artillery were ordered from the harbor of Charleston, South Carolina, into the district of country occupied by the Cherokees, in the northwestern corner of that State, where the Indian title is not yet extinguished, to drive out intruders on those lands, who had been attracted thither by the prospect of obtaining gold, and other unlawful purposes. These troops were replaced by others from Fort Monroe.

The army, according to its numerical force, is efficient and capable of performing, on correct military principles, any duty required of it. The officers are respectable in their habits and acquirements. While, however, I present the army in this favorable light, I am compelled, by a sense of duty, to make it known to you that the requisitions for officers for the performance of various duties not connected with regimental affairs are so numerous that it is seldom as many as two officers are present for duty with each company. It may, therefore, be conceived how difficult it is to afford the necessary instruction to our soldiers, or to maintain that discipline in the army which is requisite, in order to render it efficient for active operations. The line of the army can supply officers for the general and regimental staff, and for the Military Academy and Ordnance department, but it cannot bear the drafts made for assistants in the Engineer, Topographical, and Indian departments, without impairing the efficiency of the several battalions of artillery and infantry. If the corps of engineers and topographical engineers were so augmented by the authority of law as to enable them to furnish officers for their appropriate duties, without assistance from the line, it is believed the public would be better served, and the interest of all parties promoted.

The several departments of the staff have had in the late campaign an opportunity of exercising their functions, under circumstances that were calculated to test their capabilities, and it is highly gratifying to be able to state that the most satisfactory evidences have been afforded of their efficiency.

I have the honor to be, sir, your most obedient servant,

ALEXANDER MACOMB, *Major General, Commanding the Army.*

HOU. LEWIS CASS, *Secretary of War.*

R. JONES, Adjutant General.

ADJUTANT GENERAL'S OFFICE, Washington, November 30, 1832.

No. 2.

REPORT OF THE QUARTERMASTER GENERAL.

QUARTERMASTER GENERAL'S OFFICE, *Washington City, November 29, 1832.*

SIR: In obedience to your order, I have the honor to report the operations of the Quartermaster's department for the 1st, 2d, and 3d quarters of the present year, and that the whole period, not heretofore reported, may be embraced, I include the 4th quarter of last year.

The balance remaining to be accounted for by the several officers acting in the department at the date of the last annual report amounted to.....		\$34, 490 71
To which is to be added—		
1. Remittances, viz: In the 4th quarter of last year.....	\$185, 903 00	
In the 1st quarter of present year.....	81, 840 20	
In the 2d quarter of present year.....	265, 443 45	
In the 3d quarter of present year.....	393, 381 06	
		926, 567 71
2. Proceeds of sales of public property no longer fit or required for public use, and of the rent of land and public buildings not required for military purposes, including \$344 79 received by officers of the department previously to the 30th of September, 1831, the account of which was received at this office subsequently to the last report.....		6, 100 73
3. Errors, overcharges, and disallowances, credited by officers in their accounts for the 3d quarter of 1832.....		178 40
Total to be accounted for.....		967, 337 55
Of which there has been accounted for—		
1. By disbursements, viz: In the 3d quarter of 1831, and not included in the last annual report.....	\$80, 566 05	
In the 4th quarter of 1831.....	193, 902 26	
In the 1st quarter of 1832.....	96, 440 38	
In the 2d quarter of 1832.....	183, 169 56	
In the 3d quarter of 1832, so far as accounts have been received.....	374, 264 33	
		878, 342 58
2. By deposits to the credit of the Treasurer of the United States.....	1, 764 83	
		880, 107 41
Leaving a balance in the hands of the various officers of the department on the 30th of September to be accounted for, of.....		87, 230 14

The accounts of eleven officers remain to be received, which will probably reduce this balance \$10,000. Of the balance unexpended the sum of \$50,000 was in the hands of the quartermaster at Detroit. The large remittances made to that officer were to enable him to provide promptly for any unforeseen events or calls connected with the campaign against the northwestern Indians. \$10,000 have since been drawn out of his hands for disbursement by the quartermaster at New York, and the balance is applicable to the current service and to the payment of accounts for services rendered and supplies furnished during the campaign. The remaining \$27,000 is composed of small sums in the hands of more than fifty officers at the several posts in the Union, and of one on duty in Europe, and applicable to the service of the present quarter. The whole amount of the balances in the hands of all the officers of the department, it is confidently believed, will be faithfully applied to the public service and accounted for at the close of the present quarter.

The large amount of public property under the administration of the department, as well as in the hands of quartermasters, as company officers, is promptly and faithfully accounted for.

The balances remaining in the treasury of the several appropriations for the quartermaster's department proper, with the amounts due to those appropriations for expenditures made on account of other departments, will probably be sufficient for the wants of the service to the end of the year.

Of the works under the direction of the department, the road from Washington to Jackson, in the Territory of Arkansas, was reported by Lieutenant Collins, who superintended its construction, as entirely completed on the 1st of August.

The repairs on the road from St. Augustine to Pensacola, in Florida, are in progress, and will probably be completed, as far as the appropriation will permit, during the present year.

The military road in the State of Maine is not entirely completed; it is, however, in its present state, of great public utility. The appropriation already made will be sufficient, and I confidently believe it will be finished by the last of September, 1833.

In April last instructions were given to survey and open a road from Fort Howard to Fort Winnebago, but the reduction of the force at Green Bay prevented the execution of the instructions. An additional appropriation having been made by Congress late in the last session for this road, and to extend it to Fort Crawford, subsequent instructions became necessary; they were given by the quartermaster at Detroit by order of the Secretary of War. The civil commissioner appointed, jointly with Lieutenant Center, to explore and survey the route, not having arrived at Fort Howard on the 21st of October, Lieutenant Center commenced the duty alone on that day.

The difficulties experienced in the recent operations against the Indians in the movement of troops and the transportation of supplies prove the necessity of several good roads to intersect the extensive territory lying between the frontier settlements of Indiana and Illinois, Lake Michigan, and the Fox and Wisconsin rivers; and I respectfully recommend, as a most important measure for the protection and defence of the northwestern frontier, that roads be authorized from Chicago to Galena, from Chicago to Fort Winnebago, and from the latter to Galena, as well as from some suitable points on the Illinois river to Chicago, and to intersect the road thence to Galena.

The barracks and quarters at Fort Crawford and Fort Howard are not yet completed, and, in consequence of the troops at those posts being so employed as not to furnish the mechanics required, a further appropriation will be necessary for each post. I have estimated eight thousand dollars for Fort Crawford, and ten thousand dollars for Fort Howard.

Baton Rouge, in Louisiana, being an important position, and being the principal ordnance depot for the southwestern States, a thorough repair of the barracks and quarters is considered necessary, as well as the building of a suitable hospital. For both objects I have estimated that twenty-five thousand dollars will be required.

Pittsburg being an important entrepot between the principal depot at Philadelphia and the western posts, I would recommend that a storehouse and quarters for the storekeeper, with a stable for public horses, be erected on the public lot in that city. Five thousand dollars will be sufficient to complete the work, and for that sum I have estimated.

The season had so far advanced before the appropriations for quarters, barracks, and storehouses at New Orleans was made, that measures could not then be taken to carry into effect that object; and in consequence of the situation of New Orleans, from yellow fever and other fatal diseases, nothing has yet been done. So soon as favorable accounts be received of the health of the city, an officer of the department will be detached to select a suitable site and make arrangements to commence the work in the course of the winter.

The appropriation for the Delaware breakwater not having been made until the 3d of July, operations were not resumed there until the 11th of that month. The work has, however, been prosecuted with so much energy that we have succeeded in depositing about ninety thousand perches of stone from that time to the close of the operations on the 10th instant. The whole length of the foundation of the breakwater proper, on which deposits of stone have been made, is 1,893 feet, of which 1,419 feet is raised to the height of $3\frac{1}{2}$ feet above the plane of low water, and 474 feet to its destined height. The ice-breaker has been considerably enlarged during the season to an extent of 575 feet in length by 60 feet in breadth. This work has been raised from three to four feet above the plane of low water, 151 feet of which has been brought up nearly to its destined height.

Of the appropriation for the present season, it is estimated that from fifty to sixty thousand dollars will be applicable to the service of the ensuing year. This sum, with \$270,000, which I have estimated for the next year, will enable us so to extend the harbor as to furnish protection to forty or fifty vessels at a time.

The storms of the last winter were, perhaps, more severe than those of winters generally, and the fact of the work having resisted their power and afforded protection to all vessels that took shelter under it, gives assurance that the anticipations of the public will be entirely realized when the whole shall have been completed.

I have the honor to be, sir, your obedient servant,

TH. S. JESUP, *Quartermaster General.*

Hon. LEWIS CASS, *Secretary of War.*

No. 3.

REPORT OF THE CHIEF ENGINEER.

ENGINEER DEPARTMENT, *Washington, November 13, 1832.*

Sir: In compliance with your instructions of the 29th of August last, I have the honor to submit the following report of the operations of this department during the year ending on the 30th of September last, accompanied by statements marked A, B, and C; the first two relating to its fiscal concerns for the same period, and the last exhibiting the works projected by the board of engineers, which have not been commenced, and an estimate of their cost.

I. FORTIFICATIONS.

Fort Independence, Boston harbor, Mass.—It has been found to be impossible to execute the intentions of the law making appropriations for the repairs of this work and preservation of Castle island, as the services of an engineer could not be commanded for that object. It is proposed, however, to make some arrangement this winter, by which the whole of the repairs necessary to be made to this work may be completed in the course of the next year; and with this view an estimate of the funds which will be required, in addition to those already appropriated to make up the estimated cost of these repairs, has been submitted.

George's island, Boston harbor, Mass.—(The site of a fort of the first importance, projected for the defence of the harbor.) The sea-wall for the preservation of this island is completed, leaving a small amount of the funds appropriated for that purpose unexpended. This unexpended balance is retained to remedy, in the spring, any defect in that structure which the action of the coming winter may develop.

Fort Adams, Newport, Rhode Island.—The most satisfactory progress has been made in this work during the past season. The operations on it have been directed principally to the turning and roofing the casemate arches of the main work; to the completion of the scarp wall on the east front; to the construction of permanent galleries under the southwest bastion; the counterscarp walls of the southeast and southwest exterior fronts; and the permanent drains of the work generally.

Fort Hamilton, Narrows, New York.—The additions which were deemed necessary to complete this work, and which consist mainly of the means for draining the water from the roofs of the casemates, and in the construction of gun traverses, are in such a state of forwardness as to induce the expectation that the whole will be finished by the end of the present month.

Fort Columbus and Castle Williams, New York harbor.—The repairs of Fort Columbus have been prosecuted in the most efficient manner. The repairs of the scarp walls were commenced last fall, and before the operations were suspended by the approach of cold weather upwards of 458 cubic yards of heavy masonry were constructed; materials having been received and prepared during the winter, operations were resumed early in the spring, and continued without interruption till the month of August last, when

the work was abandoned in consequence of the alarm created by the malignant cholera, which was at that time raging with considerable violence among the workmen. The necessary measures having been taken to insure the health of the laborers, this interruption was of short duration, and, on the 4th of September last, the works were progressing with their usual vigor. The stone masonry laid within the year ending September 30, amounting to 2,470 cubic yards, extends about three-fourths around the work, two-thirds of which are finished and capped. The present barrack and quarters for the officers are in so bad a state of decay, independent of their want of comfort and room, as to require, to repair them perfectly, the entire removal of their floors, ceiling, and roofs; the mere shells that would remain not being worth preserving, it is deemed advisable to take advantage of the opportunity thus offered to remove these barracks to a situation within the work, which, besides offering the means of providing for the accommodation of a greater number of troops, would free its parade from a serious inconvenience arising from their present position. The cost of constructing the new quarters will be embraced in the estimate for the repairs of this work.

Nothing further has been done towards the repairs of Castle Williams than to construct a pier head for the accommodation of vessels engaged in the delivery of materials for that purpose.

Fort Monroe, Hampton Roads, Virginia.—The counterscarp wall of this work is finished, nearly 1,000 feet having been constructed within the year; the scarp walls on fronts 5, 6, and 7 are pointed, and a considerable portion of the casemated covertway was arched; the exterior revetment in part constructed; nearly 1,000 feet of slope wall in the ditch finished; the ditch on fronts Nos. 4, 5, and 6 nearly excavated; a half parapet placed on front 3; and about one-half of the counterscarp opposite fronts 1, 2, and 3, revetted with sods, when, in the month of August last, the malignant cholera made its appearance among the laborers, and compelled the engineer in charge of these works to suspend his operations. This suspension, the effects of which are still felt in the difficulty experienced in procuring workmen, will not only retard the completion of the unfinished parts of the works above referred to, but will also add to their cost. It is, nevertheless, believed that the available funds will be adequate to the completion of the covertway, the ditch, and the ramparts, though a part of the coming year will be necessary for their accomplishment. The funds already within the control of the department for this work are adequate to defray all its expenses during the present year and the first quarter of the next; and it is believed that the amount of the estimate for 1833 will be sufficient to complete it.

Fort Calhoun, Hampton Roads, Virginia.—The masonry at this work having been suspended for reasons stated in my last report, nothing of importance has been done at it, further than to receive the materials that will be required in its construction; distribute them over those parts of the site to be occupied by the walls in which they will be used, and to observe the degree of settling produced by the mass of materials already collected. In 1831 this settling amounted to six inches, and during the year ending 30th of September last it was but little more than three inches—indicating clearly a tendency in the pile to assume a fixed position, at the same time that it shows the necessity of loading the work and allowing time for the equilibrium to be established. To give to the work the relative relief contemplated in the original plan, it will require 20,000 tons of stone to compensate for the subsidence of the mole during the last two years. The estimate for this work for the next year is based upon the supposition that 26,000 tons of building and breakwater stone will be added within that year.

Fort Macon, Beaufort, North Carolina.—As anticipated in my last report, this work is nearly finished. The operations at present are principally directed to the construction of works for the preservation of its site, and the funds already available for them will be sufficient for their service during the next year.

Fort at Oak island, Cape Fear river, North Carolina.—This fort is reported as being ready to receive a garrison, though it is not entirely completed, in consequence of a want of funds for that object. The deficiency in the amount of funds necessary to complete this fort within the past year, as anticipated, is owing to a mistake in the estimate furnished last year by the local engineer having charge of the operations at Oak island—a mistake which had its origin in several circumstances explained by that officer. The parts of this fort which remain unfinished, and to the completion of which it is proposed to apply the funds asked for in the estimate already submitted, are the gun traverses, furnaces for heating shot, and the works for the preservation of its site.

Fortifications in Charleston harbor.—The operations at Charleston have been directed, during the past year, to the preservation of the site of Fort Moultrie, and to the formation of a mole on the shoal opposite to this fort, to be occupied as a foundation to the new work projected for the defence of the harbor. One hundred and eighty tons of stone have been added to the breakwater at Fort Moultrie, and, in July last, the site of this work was considered secure for some time to come, though the abrasions of the sand on the west side were considerable. As it is deemed essential to the preservation of Fort Moultrie that this encroachment of the sea should be arrested as soon as possible, it is proposed to apply a portion of the funds estimated for the service of the fortifications in Charleston harbor, during the next year, to this object. The mole for the new work has progressed as rapidly as could have been expected; upwards of 22,000 tons of stone have been added to it during the past year.

Fort on Cockspar island, Savannah river, Georgia.—From the date of my last annual report to the beginning of July last, when the engineer having the superintendance at Cockspar was assigned temporarily to duty on the Cumberland road, the progress in the construction of this fort was, in a high degree, satisfactory. The materials for the foundation of the work having been prepared, the grillage would have been entirely laid within that period but for an alteration in a part of the foundation, which a better acquaintance with the substrata of the ground suggested as being necessary to insure a uniform stability throughout the work. About one-half of the grillage, however, was laid and secured; the piles which are necessary for the southeast front were driven; the excavation for the entire rampart was made; the earth for the glacis of four fronts, and for the rampart of the outwork deposited; and considerable quantities of materials of various kinds were received and prepared for use when the work was left, at the time above stated, in a situation to resume operations with advantage as soon as the officer having the direction of it shall have returned to his post.

Fortifications at Pensacola, Florida.—The operations for the construction of the fort on Santa Rosa have been conducted with as much advantage as the limited amount of appropriation for the past year would allow. All the materials have been delivered agreeably to contract, and the condition of the work is in a high degree favorable; the most important parts that remain to be finished being of a nature to justify the belief that the whole work might be completed in the course of six months or less should occasion require it. The estimate for this work for 1833 contemplates its completion within that period.

Fort at Mobile Point, Alabama.—The operations at this work during the past year have been directed principally to the formation of the ramparts, banquettes, and glacis. Since my last report it has been

discovered that the *blindage* of the citadel, which was constructed of wood, was in so bad a state of decay as to require its entire removal; it has been accordingly removed, and the proper measures taken to replace so much of it as may be necessary for the immediate service of the work, omitting that portion which will not be required till the fort is in a state of siege. This will increase the amount of funds that, otherwise, would have been sufficient to complete the work, which, it is hoped, will be accomplished in the course of the coming year.

No estimate of funds having been received from the local engineer, the estimate submitted is based upon that furnished last year after allowing for the additional expense which will be incurred in rebuilding the *blindage*.

Battery at Bayou Bienvenue, Louisiana.—The repairs of this work were a good deal retarded in the early part of the year by the inclemency of the season and the difficulty of procuring laborers. The spring having been unusually rainy, not only impeded the progress of the masonry, but rendered it necessary to postpone the excavations till they could be resumed under more favorable circumstances. Notwithstanding these difficulties, the repairs were prosecuted with considerable success before the commencement of the sickly season, during which nothing has been done. They will be resumed as soon as the nature of the climate will permit.

Fort Wood, Chef Menteur, Louisiana.—Owing to a want of engineers, the repairs of this work were intrusted to the management of an officer who was already engaged in the discharge of important duties at another and distant post; and this officer not being able to leave the service with which he was occupied till late in the working season, it became difficult if not impossible to procure sufficient laborers and suitable materials, so that but little progress has been made towards completing those repairs.

Tower at Bayou Dupré, Louisiana.—This tower was so far completed during the past season as to require no further appropriation. The damages sustained during the hurricane of August, 1831, have been repaired, and the battery, in advance of the tower, nearly finished, as contemplated in the original plans of this work. The whole may be finished in a few weeks.

A portion of the funds provided by the appropriation for contingencies of fortifications has been applied to the repairs of Fort Jackson, Fort Washington, Fort McHenry, Fort Wood, Fort Moultrie, Fort Pike and Petite Coquille, Tower Dupré, Battery Bienvenue, to the construction of a wharf at Fort Monroe, and to defray the expenses of the survey of Provincetown harbor, with a view to its fortification, as required by a resolution of the House of Representatives of the 26th of January last, and which was referred by you to this office for execution. This survey is now in course of execution.

Before closing the subject of fortifications, I would call your attention to that part of my last annual report which suggests that, as several of the works already mentioned will be completed during the ensuing year, appropriations be recommended for commencing the forts projected at Throg's Point, New York; the reconstruction of Fort Delaware, in the Delaware river; Sollers's Point Flats, Maryland; Baid Head, North Carolina; the Barrancas or Foster's Banks, Pensacola harbor, Florida; and for Grand Terre, Louisiana; an estimate for which will be laid before you. I would also renew the representations, then made, of the expediency of suggesting that the appropriations for fortifications be made at as early a period of the approaching session of Congress as practicable.

2. INTERNAL IMPROVEMENTS.

La Plaisance bay, Michigan.—In compliance with your instructions, the officer having charge of the Detroit and Chicago road was directed to superintend the operations on the piers at this place; and, under the expectation that the pier formerly built could be repaired and placed in a state to meet the wants of the harbor, he was directed to make the necessary examination, and to report the result to this department. The presence of this officer having been required at the seat of Indian disturbances last summer, the examination could not be made before the beginning of September last, when it was found that the whole of the old pier, with the exception of about 200 feet, had been washed away and rendered useless by the storms and ice of last fall and winter. That part of the pier built by contract, before the work was placed under the direction of this department, has been completely carried away, leaving only a few stones and the foundation timbers to mark the place where it stood. Arrangements will be made for its reconstruction early next spring.

Huron river, Ohio.—The harbor at the mouth of this river is at present in good condition. No new works having been constructed during the past season, the funds thus far have been applied in such manner as was deemed necessary to place those already constructed in a condition to resist the effects of the tempestuous season, and to prevent their being injured by the spring freshets. Some additional works are yet necessary to complete this harbor, though no further appropriation will be required for that object.

Black river, Ohio.—The public works at this harbor are in good repair, and are believed to be secure against the recurrence of an accident which, in November last, deprived the east pier of about sixty feet of its length, to a depth of three feet below the surface of the water. This damage has been repaired, and the pier extended about forty yards into the lake. A part of the appropriation for the present year having been absorbed in the repairs rendered necessary by the accident above referred to, that appropriation will not be sufficient to complete the work at this harbor, as anticipated; and an estimate of the amount necessary to effect this object has therefore been submitted.

Cleveland harbor, Ohio.—The funds appropriated for the works at this harbor have been applied to their completion, by filling in the piers which had settled; driving piles to render the works more secure; and providing them with the necessary appendages to prevent injury from collision with vessels entering the harbor. These works, by the close of the season, will be rendered secure, and no further appropriation will be necessary for them.

Grand river, Ohio.—This harbor is in good condition, and no further provision for funds will be necessary to complete its works and place them in good order.

Cunningham creek.—The means provided for the erection of a pier head at this place are not sufficient to complete that structure according to the plan adopted. About two-thirds of it have been constructed and rendered secure, and an estimate of the funds requisite to finish it has been submitted.

Ashtabula creek, Ohio.—The operations at this harbor have been directed to the perfection of the works for its protection, and to the removal of obstructions at the mouth of the creek. These obstructions consist of rock, situated about $6\frac{1}{2}$ or 7 feet below the surface of the water, and thus far but little progress has been made in removing them. Experiments, however, are now in progress, which it is hoped will

result in the suggestion of some plan for their speedy removal. An estimate has been submitted for widening the entrance to this harbor.

Conneaut creek, Ohio.—The pier at the mouth of this creek has been extended sixty feet into the lake since my last report, and it is believed that the funds already available for it will be sufficient for its completion.

Presque Isle, Pennsylvania.—The works at this place are in as good a state of preservation as can be expected under all the circumstances. The breach through the peninsula at the head of the bay is represented as having an injurious effect on the harbor. It is increasing in width, though not in depth; and fears are entertained that the whole of the peninsula will be removed, and that the sand from it will be washed into the harbor. To close this breach, or to confine it to a channel sufficiently large to allow the passage of vessels through it, would require an appropriation equal in amount to the whole sum already expended on this harbor. During the past season, besides paving 400 yards of the north breakwater, that structure has been extended 200 feet towards the main land, leaving a distance of 400 yards yet to be constructed, for which an estimate has been submitted. The space between the end of the breakwater and the main land has increased considerably since my last report, but it is confidently believed that when it is closed no other breach can be made.

Dunkirk, New York.—The pier erecting at this place has been extended from the main land 136 yards, and filled in with stone to the surface of the water, making the whole extent of this pier 416 yards. Should the weather prove favorable, ten additional cribs of thirty-four feet each will be sunk and filled, as above, this fall. No additional funds will be necessary to complete this pier to the distance contemplated, which will carry it to ten feet water.

Buffalo, New York.—The works for the protection of this harbor have the appearance of being strong and durable. An estimate of the funds necessary for their prosecution and completion has been submitted.

Black Rock harbor, New York.—The funds appropriated for the improvement of this harbor have been applied to the construction of an ice-breaker for turning the ice and current of water from the harbor, which, heretofore, have caused considerable injury to the piers at that place. No estimate having been received from the agent at these works, and having understood that the last appropriation will be sufficient to complete them, no funds in addition to those already available will be required.

All the harbors on the south shore of Lake Erie are in a situation to offer protection and safety to vessels navigating the lake, and to afford facilities in transferring the produce of the surrounding country to market. The application of the moneys appropriated by Congress for the improvement of these harbors has given to the people a spirit of enterprise and industry which is perceptible on the whole south shore of the lake. The plans adopted for deepening channels at the mouths of rivers which were choked up with sand have afforded in their execution a result far exceeding the expectation of all who were acquainted with their situation prior to the commencement of their improvement. The loose sand has been driven from the channels by the force of currents created by works for that purpose, and the water now rests upon a compact bottom, giving, except at Ashtabula, a sufficient depth for all vessels navigating the lakes. But as these works are in part constructed of perishable materials, and as their completion is near at hand, it is highly important that provision should be made by which the injuries to them, arising from decay and unforeseen accidents may be repaired, and their usefulness preserved.

Genesee river and Big Sodus bay, New York.—The progress made in the improvements at these places during the past year is of the most flattering character. Although the appropriation for these works became available late in the season, yet such had been the previous preparation of materials, and such the fitness of the weather for work, added to the unusual good health of the workmen, that the piers at both of these places have advanced beyond the most reasonable expectations. The number of cribs constructed during the past season, and put in place at the Genesee river, is twenty-eight, and at Big Sodus thirty; all of which have been well secured, both above and below the surface of the water. The resistance which these piers have opposed, thus far, to the action of the storms and large masses of ice, affords additional evidence in support of the opinion, before expressed, that they will accomplish the object for which they were intended, viz: useful and safe harbors of refuge for vessels engaged in the foreign and domestic trade. Recent examinations at Genesee, compared with previous surveys, show an increased depth of water from the mouth of the river to a point in the lake as far out as the ends of the piers. The channel, which at present affords not less than ten feet water, was formerly obstructed with sand bars, over which no vessel could pass having a draught of more than six feet. The action of the river currents upon the bed seems to indicate that 200 additional yards of pier work will complete the improvement of that river, which may be accomplished in the course of the coming year.

It is believed that all the operations at Big Sodus bay may be brought to a close during the approaching year, except that of bridging, which will be commenced as soon after the completion of the pier work as possible, with a view to connect the interior with the exterior channel.

Oswego, New York.—The improvements at this place have been prosecuted during the past year with much zeal and success. The piers, to an extent of several hundred feet, are already raised to the height required by the plans; and should the present fall prove favorable as to weather, they will be completed before its termination. Already many of the benefits which were anticipated from these structures have been realized in the perfect protection which they afford against the encroachments of the heavy sea experienced at this place. By the addition of nearly four thousand cords of stone, the mole has been raised for a distance of three hundred feet, to a level with the surface of the water; and experience thus far seems to place the question as to its permanency beyond all doubt. An estimate of the funds necessary to complete these works has been submitted.

Kennebec river, Maine.—The operations for removing the obstructions to the navigation of this river, at Lovejoy's Narrows, it is believed, are brought to a close before this time.

Kennebunk river, Maine.—The last appropriation for the repairs of the piers at the mouth of this river became available too late in the season to apply with advantage any portion of it to the object for which it was intended. The winter being the most favorable season for purchasing timber and other materials, it is probable that no work will be done on the piers until the commencement of the coming year. There being a considerable quantity of materials on hand, no additional appropriation will be necessary for this improvement for 1833.

Berwick branch of the Piscataqua river.—But a part of the small sum appropriated for improving the navigation of this river at Quamlegan rapids has been applied, in consequence of the unusual continuance of high water. This improvement will be completed, however, in the early part of next year, should the

stage of the water permit; and the funds already in the hands of the agent will be sufficient for that object.

Merrimack river, Massachusetts.—The effects thus far produced by the pier at the mouth of this river afford the most satisfactory indications that the object contemplated by its construction will soon be in part realized. The hillocks of sand at the bottom of this river, which greatly impede its navigation, are much reduced; the channel opposite Black Rock is both deepened and made wider, and affords a good and safe anchoring ground. No effect, however, is produced upon the bar at the entrance of the river.

Deer island, Boston harbor, Massachusetts.—The sea-wall which forms a part of the works now in course of construction for the preservation of this island, in several places, and to an extent of several hundred feet, is raised as high as originally contemplated, a part of the breakwater in front of this wall is constructed, and arrangements are made for the delivery of the materials necessary for the prosecution of these improvements during the remainder of the working season. The funds already available for these works will probably be sufficient to complete them, unless those portions of them which are already constructed sustain an injury during the approaching winter, which is not at present apprehended.

Plymouth beach, Massachusetts.—The operations at this place have been confined, principally, to the northeastern extremity of the beach, where a wall has been erected, to the extent of four hundred and fifty feet, in the most substantial manner. The planting of grass, and other means of protecting the beach, have also been continued. The general condition of the beach is very good, the grass is increasing and flourishing in a remarkable degree, and the works seem to have produced the desired effect.

Provincetown, Massachusetts.—The plan of improvement for the preservation of the harbor at this place contemplates the planting of beach grass to arrest the progress of the drifting sand which occurs there with almost every northerly wind, and which threatens, if not checked, to fill up this very important harbor, as well as to lay waste the town itself. The spring being the only season in which this grass can be planted with any hope of its being productive of the desired end, no part of the appropriation made at the last session of Congress has been applied, as it was not available before the middle of summer.

Ilyannis harbor, Massachusetts.—The operations for the extension of the breakwater at this harbor have been prosecuted during the past season, but no report having been received from the agent, I am unable to state its exact condition.

Stonington, Connecticut.—As anticipated in my last annual report, the breakwater at this place is completed; the citizens of the borough of Stonington, and others interested in the navigation of that place, evince, however, a strong desire for an extension of this improvement by the placing of buoys at three or four points, to indicate the position of certain reefs and shoals in the immediate neighborhood of the harbor. By the projection of the pier into the channel the passage to the inner harbor is narrowed to such an extent as frequently to cause vessels, in their efforts to avoid the end of the pier, to ground upon the shoal which is immediately opposite. It seems, therefore, to be important that the position of this shoal should be well defined, and as the unexpended balance of the appropriation which was made for the pier is more than sufficient to accomplish this desirable end, it is respectfully recommended that it be applied for that purpose.

Mill river, Connecticut.—The breakwater and dike at this harbor having been finished agreeably to the original plans, they were found not to be of sufficient extent to answer all the purposes for that place, they were intended. An estimate was therefore submitted, and an appropriation made for their extension; contracts have been entered into for the necessary additions, both to the breakwater and dike; and, on the 30th September, the former was about one-fourth, and the latter about one-third executed. The contracts provide for their completion by the 1st of January next.

Harbors of New Castle, Marcus Hook, Chester, and Port Penn, Delaware river.—A dredging machine has been kept in operation at these harbors, but their precise condition is not known to me, as no report in relation to them has as yet reached this office.

Ocracoke inlet, North Carolina.—Ample preparations were made for the improvement of this navigation at an early period of the past season, but, for want of funds, operations were not commenced until late in July last, when the appropriation became available. Since the middle of August the dredging machine has been at work on the shoal at the junction of Wallace's channel with the Beacon Island sound, the common anchorage ground for outward-bound vessels. From this shoal nearly eight thousand cubic yards of sand have been removed within the period of six weeks, giving an increased depth over that shoal of from seven and a half to nine feet water at flood tide, and a channel about fifty yards wide. There only remains the obstruction presented by the bar of the Flounder Slue, which is the most extensive, but which has already a depth of little more than seven feet water over it at high water. It is intended to operate on this shoal during the remainder of the season, as an increased depth of six inches will render the channel of Flounder Slue superior to any other in that navigation, being the shortest by one mile, most favorable for the prevailing winds, and having a good harbor near Shell Castle.

The most gratifying circumstance attending the operations at Ocracoke is the apparent permanency of the work already accomplished, which is such as to induce a strong belief in the ultimate success of the experiment. A new boat, with machinery of greater power than that heretofore employed, was finished in the latter part of September, and is, before this, in operation in conjunction with the old boat. An additional appropriation being necessary for carrying on these operations during the year 1833, an estimate of its amount has been laid before you.

Cape Fear river.—The lower western jettee on this river has been completed during the past season, as also that near Barnhard's creek, on the opposite shore, with the exception of about two hundred feet which remain to be flanked. To prevent the effect of the strong currents of that river on these jetties, wings have been constructed at intervals along their whole extent. Other jetties have also been provided with wings to the extent of nearly one thousand feet, notwithstanding which, doubts are entertained as to their stability; the operations of the dredging machine have been greatly retarded during the same period, in consequence of the failure of many parts of its machinery, and of the difficulty, indeed impossibility, of having repairs of the nature required done nearer than Baltimore. A survey of this river will soon be made with a view to making a chart of it, which, it is believed, will exhibit an increased depth of water of about one foot in the channel.

Savannah river, Georgia.—Nothing has been done, thus far, towards applying the funds provided by Congress at its last session for improving the navigation of this river, between its mouth and the city of Savannah. The direction of the improvement has been assigned to the engineer having charge of the works of fortification now in progress of construction on Cockspar island. The services, however, of that officer having been required during the past summer on the Cumberland road, east of the Ohio, to super-

intend its repairs, he has been unable as yet to give his attention to this subject, but will, as soon as his other duties allow, make the necessary examination, and commence operations.

Inland navigation between the St. John's and St. Mary's, Florida.—An examination of this passage having been recently made by the assistant engineer under whose personal supervision the operations for its improvement were formerly conducted, and his report upon the subject being in accordance with the views of this department, an estimate of the funds necessary to accomplish the object of the report has been submitted.

St. Mark's harbor and river, Florida.—The operation of dredging in the harbor of St. Mark's is brought to a close, by which an increased depth of water of four feet has been attained in the channel leading to the town of St. Mark's, except in one place where this operation was interrupted by rocks, over which there is only a depth of eight and a half feet. Efforts were making on the 30th September last to deepen the channel over this rock, which the plan of operations adopted by the officer having charge of the work, and the very favorable report on these improvements just received from the assistant engineer, give every reason to hope will prove successful. The cut through the natural bridge over the St. Mark's river has been commenced; and the boats and machinery necessary to prosecute the improvement above this bridge having been transferred over it, and all the preparations accomplished, it is expected that operations will be carried on with despatch.

Apalachicola, Florida.—The improvement of the navigation of this river has been completed so far as it is deemed practicable to expend funds for that object with any hope of success, there having been removed during the past season all the obstructions that were inaccessible last year in consequence of high water, and the banks having been cleared of all the heavy timber likely to fall into the river and present new obstructions. A part of the appropriation for this work is unexpended.

Harbor of Mobile, Alabama.—The operations for deepening the channel through Choctaw Pass, in this harbor, having been suspended for reasons stated in my last annual report, they were not resumed before the beginning of August last, in consequence of difficulties experienced in reclaiming the dredging machine, which was sunk in several feet water. Since August, however, this machine has been in successful operation.

Pascagoula river, Mississippi.—The works at this place have not as yet been resumed. During the suspension of his operations, caused by the transfer last year of the funds for this improvement to the surplus fund, the contractor removed the machinery which he had in operation at this river to New Orleans, and had not, at the last advices from the agent, been induced to resume the execution of his engagement.

Red river, Louisiana.—The appropriation for overcoming the obstructions presented to the navigation of Red river by the Great Raft became available at too late a period in the season to make the necessary preparations for continuing the works on that river during the past summer, as almost all the supplies for the support of the force requisite for their prosecution can only be forwarded to the point at which they would be required in the season of high water. Nothing has been done, therefore, at this improvement since operations were suspended for want of means. This is the less to be regretted, as it is believed from the reports received at this department, as well as from verbal information entitled to great credit, that the plan of operations heretofore pursued is not such as to afford, even in its accomplishment, any lasting benefit to the navigation of that river. Instead of deepening the bayous and connecting them by short canals, and thus opening a communication around the raft, it is the opinion of persons, who have had opportunities of judging, that the raft itself might be removed through the agency of one or two of the steamboats at present employed in improving the navigation of the Mississippi and Ohio rivers at an expense not exceeding that which would attend the execution of the plan already adopted. This being the opinion also of people residing in the neighborhood of the raft, it was deemed advisable to suspend further operations till one of the boats alluded to could be despatched, without injury to the service on which she is at present engaged, to ascertain by trial the possibility of effecting its removal. In addition to the benefit which the removal of the raft would confer upon the navigation of the river, it would reclaim by drainage an immense tract of valuable land which otherwise must lie waste till the water with which it is at present covered is carried off through its natural channels.

Arkansas river, Arkansas Territory.—Nothing has been done towards making the examination required on this river in consequence of the want of an officer of engineers whose services could be rendered available for that purpose.

Mississippi and Ohio rivers.—For information on the subject of the improvement of these rivers, I beg leave to refer you to the accompanying report of the superintendent for the year ending on 30th September last. A thorough inspection has just been made of the works for the improvement of this navigation, and the report of the officer in relation thereto will be submitted as soon as received at this office.

Cumberland river, Tennessee.—Captain Delafield, of the engineers, was directed in August last to make an examination of this river, and to devise, in conjunction with Mr. Shreve, the superintendent of the improvements on the Mississippi and Ohio, the proper measures for the removal of such obstructions to its navigation as this examination might suggest as being necessary. The examination having been completed, an agent was appointed and charged with the execution of the plan of operations on that river, who will be subject to the general direction and supervision of Captain Delafield and Mr. Shreve.

The experiments of deepening the channel at the entrance of Nantucket harbor, Massachusetts, and that for deepening the channel through Pass au Heron, Alabama, having failed to produce any satisfactory result, the works at those places have been entirely suspended, and the dredging machine employed at the former place will be transferred to the Savannah river, Georgia, and that used at the latter to Pascagoula river, Mississippi.

Cumberland road, in Ohio.—The officer of engineers who, in accordance with your instructions, was assigned to the superintendency of the construction of this road, commenced his duties on the 13th of August last. The operations on this road during the past year have been confined to that portion of it lying between Zanesville and Little Darby creek, which includes a distance of about sixty-six miles. From Zanesville west to the point where the Ohio canal crosses the road at Hebron, all the bridges and culverts have been built, and, with the exception of a wooden superstructure of ninety-five feet span over the south fork of Licking, are constructed of sandstone of various kinds, united with mortar, for the most part, of inferior quality, excepting the culverts, which are of dry stone masonry. These structures, however, are all in a good state of preservation, and require but slight repairs. The surface of the road for a distance of twenty miles west of Zanesville has received a covering of six inches of stone of various qualities, consisting principally of flint, limestone, slate, and sandstone. From the twenty-one miles west

of Zanesville to the Ohio canal the road has been graded, and is ready to receive the first stratum of metal. Between Hebron and Columbus, comprising twenty-seven miles, all the bridges and culverts have been contracted for, and, with the exception of the wooden structures for the canal feeder, Black Lick creek, Big Walnut creeks, and Alum creek, have been completed, in all probability, before this. The masonry on this section is also composed of different varieties of sandstone, with some limestone, and of a mortar of much better quality than that before mentioned.

Contracts were entered into last year for clearing and grubbing that portion of the road included between the twenty-seventh mile west of Zanesville and Columbus, but, in consequence of many parts of it having been received from the contractors in an unfinished state, and other parts having been abandoned by the contractors in the same condition, it will be necessary to place them again under contract before the operation of grading can be commenced. Measures having been taken to have the road graded between Hebron and Columbus, it is expected that a rough grade, sufficient for the passage of carriages, will be accomplished by the first of January, and that the full grade will be completed by the first of June next.

On that part of the road between Columbus and Little Darby many of the bridges and culverts have been constructed and the grade nearly completed. The interests of this portion of the road appear to have been almost entirely neglected. With the exception of the wooden bridges over Big and Little Darby, which are represented as having been well built, there is little on this section of the road that deserves commendation. The stone masonry, which is of an inferior limestone, is of bad quality, and altogether disreputable to the great national work of which it forms a part. Gravel has been placed on some parts of it, but of such kind, and in such condition, as to be injurious rather than serviceable; and many of the culverts which have been constructed will require to be enlarged, having been made entirely too small to satisfy the wants of the road.

Cumberland road, in Indiana.—The annual report of operations on the eastern division of this road is of so general a character as to render it impossible to state its exact condition, though it is believed that its affairs have been conducted with zeal on the part of the superintendent. The contracts which were entered into last year for the continuation of this road west of Indianapolis have all been executed, with the exception of those which provide for the erection of bridges over the Big White Lick and White river. Both of these structures, however, are now in progress and will soon be completed. The act of Congress making an appropriation for the service of the road in Indiana for the current year having provided specially for the erection of bridges over the east and west branches of White Water, and other small streams, with the view to bring the road into immediate use, the sum appropriated was divided into two portions, bearing to each other the proportion indicated by the respective wants, under this law, of the two divisions of the road, as ascertained from an examination of the estimates of masonry furnished by the commissioner who located the road through this State. The funds being thus divided, contracts were entered into for a continuation of the western division sufficient to absorb all the money that became available by this arrangement which was not pledged by former engagements. Contracts were also made for the erection of the bridges over the east and west branches of White Water in the eastern division, and these bridges are to be finished by the last of August next. An officer of engineers is now engaged in making an inspection of this road, whose report will also be submitted when received.

Cumberland road, in Illinois.—The superintendent of the national road through the State of Illinois, having experienced a good deal of sickness in the early part of the present fall, has been unable as yet to transmit his annual report of its condition. Judging, however, from the correspondence of the superintendent with this department, and the uniformly correct manner of rendering his accounts, as well as from the general character of his administration, it is believed that the interests of the road have been well attended to, and that it is in as good a condition as the means provided for its construction, and the circumstances attending the operations on it generally, would permit.

Cumberland road, east of the Ohio.—In obedience to your instructions of the 13th July last, an officer of engineers was assigned to the superintendence of the repairs of this road; and, with the view to meet the requirements of the law of Congress, passed at its last session, in reference to these repairs, as well as the immediate wants of the road, which were represented as being very great in consequence of its dilapidated condition, that officer was instructed to limit his operations to the portion of the road lying within the limits of Pennsylvania and Maryland; to divide the road in each of these States into as many equal sections as there are toll-gates provided for by the laws of these States, which are mentioned in the act of Congress above alluded to; to complete the repairs in the most permanent manner, commencing with that which was in the worst condition, and proceeding regularly through the sections from the worst to the best; and to turn over each section, as soon as finished, to the State in which it may be situated. An examination of this road was commenced in the latter part of July, and towards the last of September contracts were entered into for making repairs over 12,019 roads, which embrace the two worst sections in Pennsylvania, and the worst section in Maryland. It so happens that these three sections are all continuous, and have their commencement in Maryland at the end of the first section west of Cumberland. These contracts provide for the completion of the repairs by the first of July next. The officer in charge, in communicating to this department the result of the examination which he made of the road immediately after his arrival on it, says: "I find the road in a shocking condition, and every rod of it will require great repairs; some of it is now impassable."

In the course of my recent inspection of this road, which was made in accordance with the verbal instructions that I had the honor to receive from you on the 3d instant, I ascertained that, in making contracts for the repairs, the contractors were, in many instances, permitted to use the best of the stone composing the old covering of the road when none better could be procured in the neighborhood; and it is believed that advantage has been taken of the opportunity thus offered to introduce into the new covering material of inferior quality, and which had been previously condemned. I also found that the stone in general was not broken to the size prescribed by the contracts, and that the side drains had not been sufficiently attended to. The present superintendent, however, has been verbally instructed on this subject, and will adopt, without delay, the proper remedy for these evils.

The difficulty of procuring a suitable material for the covering has rendered the use of a perishable stone a matter of absolute necessity in the first two layers; these layers, together, form a thickness of six inches, and will, in all probability, be laid upon the road before winter, which will place it in a condition to admit of easy travelling. By spring the road will be in a state to receive the last layer, which will make up the nine inches, and will constitute its enamel, or wearing surface. This layer should be made of flint, granite, or limestone; for without the use of one of these materials the repairs must necessarily

be of a temporary nature, and not such as are contemplated by the act of Congress making appropriation for them. Limestone is the only one of the materials mentioned which is found upon the line of the road, and as this can only be procured with considerable difficulty and at great expense, it is believed that the only plan would be to haul the stone required for those parts of the road remote from the quarries which furnish it, the United States paying the difference of transportation, which would be necessary to place the contractors for those parts on a footing of equality with those having quarries in the immediate neighborhood of their work. The expenses of this transportation would be heavy; but, should the government choose to incur it, all the material of the best kind may be procured, deposited along the road, and be prepared for use in the spring, as soon as the frost leaves the ground; and, in anticipation that such will be its determination, verbal instructions have been given to the superintendent to take the proper measures for procuring this material agreeably to the plan suggested.

The grade of the road is in general good, and will require alteration in but few instances, and, in those, involving no great expense. At Cumberland I would recommend a change in the location of the road to turn Wills's hill, by which a lift of eight hundred feet in four and a half miles would be avoided, and one hour gained in each trip of the mail, besides greatly benefiting other transportation of a heavier character passing through Cumberland.

Lieutenant Mansfield, the officer who had the temporary management of the affairs of this road, has done all that zeal, aided by sound judgment, could effect. The quantity of work done, and the manner in which it is executed, afford the most satisfactory evidence of great industry, and entitle him to much credit.

The assistants on the road are industrious, and, as far as it is in their power, discharge their duty faithfully; but as much time is necessarily employed in passing over the line of their supervision, impositions are hourly practiced, which they can neither prevent nor detect. More aid is therefore required, and must be obtained, before a system of supervision suited to the wants of the road can be established, and this aid should be drawn from the army.

An estimate of the funds necessary to prosecute these repairs during the next year has already been submitted.

Road from Detroit to Chicago, Michigan.—The contracts entered into last year for the construction of twenty-seven miles of this road, beginning at the one hundred and fifth and terminating at the one hundred and thirty-second mile from Detroit, including the erection of bridges over Cold Water river, Flag creek, Swan creek, and Prairie river, have, in most instances, been complied with, and the work provided for by the whole of the contracts would, in all probability, have been executed had not many of the contractors been called upon, in the early part of the present year, to march towards the seat of the late Indian disturbances. These contractors are at present, however, actively engaged in fulfilling the terms of their contracts, and no doubts are entertained of the completion of their engagements within the present fall. An estimate of the funds necessary to complete this road as far as the northern boundary line of Indiana has been submitted.

Road from La Plaisance bay to the Detroit and Chicago road, Michigan.—The commissioners appointed under the act of Congress of 4th of July last, which provides for the location of this road, having accomplished the object of their commission, and furnished their report, accompanied by a plat, field notes, and an estimate of constructing this road, an officer has been directed to superintend its construction, with instructions to place that portion of it included between the bay and Tecumseh under contract, with as little loss of time as possible. The accounts rendered by the commissioners, as well as their report, show that the amount of expenditures on account of the location exceeds the sum appropriated for that object by \$605 76; which excess has been advanced by the commissioners under the expectation that Congress will relieve them by an additional appropriation of that amount. As an examination of the accounts shows that no unnecessary expenses were incurred, this amount is accordingly embraced in the estimate already furnished.

Road from Detroit to Saginaw, Michigan.—Contracts have been entered into for the construction of this road as far as the fifty-seventh mile from Detroit, including the erection of bridges over the Thread and the Flint rivers—the former on the fifty-eighth and the latter on the sixtieth mile. An estimate for the continuation of this road has been submitted.

Road from Detroit to the mouth of Grand river.—The commissioners appointed under the act of Congress of the 4th of July last, in reference to this road, are now engaged in making its location.

Road from Detroit to Fort Gratiot, Michigan.—The location of this road having been changed by virtue of the authority granted in the act of Congress of the 3d of July last, arrangements have been made for continuing its construction by contract as far as Black river, which is just below Fort Gratiot. The funds available for this road are sufficient for its completion, which will be accomplished in the course of the coming year.

No funds having been provided by the act of Congress of 14th July last, in reference to the northern boundary line of the State of Ohio, to meet the expenses incident to making the observations and examinations necessary to determine the lines specified in that law, nothing further could be done than to prepare an estimate of the funds that will be necessary, to designate an officer for the performance of the service, and to prepare the proper instruments. The estimate has been submitted.

BOARD OF ENGINEERS.

Since my last annual report a report has been received from the board of engineers submitting a summary of their operations during the preceding year, and a statement of the objects to which it was conceived most advantageous to the service that their attention should be next directed, which was submitted to Congress at its last session. In addition to this, the assistant engineer having made a reconnaissance of the site of Fort Moultrie, and of the inland passage between the St. John's and St. Mary's, has furnished projects for the preservation of the former and for completing the improvement of the latter. His report on the communication between the St. John's and St. Mary's is herewith transmitted.

MILITARY ACADEMY.

The report of the board of visitors who attended the last general examination of this institution affords unequivocal evidence that its affairs continue to be conducted in the most able and efficient manner. That report accompanies this communication, and in calling your attention to it I would respectfully recommend for your consideration the suggestions of the board in reference to the modifications in its organization,

and to the erection of the additional buildings, which experience has shown to be necessary to meet the wants of that institution. It was not in my power to make an inspection of the academy during the past year, in consequence of incessant engagements with the business of my office.

OFFICE OF THE CHIEF ENGINEER.

To facilitate the transaction of business in this office, and diminish its contingent expenses, I would suggest that a provision be recommended for extending the franking privilege to the chief engineer.

The embarrassments under which the engineer department has labored in its efforts to discharge the duties which have been assigned to it within the last year, compel me again to draw your attention to the subject of the increase of the corps of engineers. Although urgent necessity has long existed for the adoption of some measure by which the means of the department would be enlarged to a degree commensurate with its duties, yet this necessity has never been so great as at the present time, as must have appeared in the course of the preceding part of this report. It has been seen that in consequence of the special provisions of the laws passed at the last session of Congress, officers of engineers were withdrawn from the superintendence of fortifications to be placed in charge of the national road east and west of the Ohio river, and for other objects not immediately connected with the national defence, thus greatly impairing the efficiency of the corps for military purposes, and imposing upon the department, in consequence, the necessity of suspending operations at works previously commenced, and of postponing those for the commencement of others, which are provided for by law. Thus circumstanced, it is due to that part of the public interest intrusted to the care of this department, that I should now earnestly recommend for your consideration a measure which has been so frequently urged by your predecessors upon the favorable notice of Congress. The increase which is proposed, as being equal to subserve the wants of the service and to insure an efficient and beneficial discharge of the duties referred to this department, is that suggested by your immediate predecessor in his report upon this subject to the House of Representatives, of January 13, 1831, to which I beg leave to refer you.

All of which is respectfully submitted.

C. GRATIOT, *Brigadier General, Chief Engineer.*

Hon. LEWIS CASS, *Secretary of War.*

Statement exhibiting the fiscal concerns of the Engineer department for the year ending September 30, 1832, in which the funds that had accrued within that period, and the manner of their accruing, are stated and accounted for by showing their application; and showing, also, the amounts expended upon the several works under construction.

Designation of the appropriations.	Available for 1832, and whence derived.		Aggregate.	Amounts applied, corresponding with accounts rendered to September 30, 1832.	Accounted for.			Remarks.
	From appropriations for 1832.	From balances of appropriations and those remaining in the hands of the agents September 30, 1831, and sums refunded, &c.			Amount withdrawn from the treasury October 1, 1832.	Balances in the hands of agents October 1, 1832.	Aggregate accounted for, and corresponding with the aggregate available.

C.

Statement exhibiting the works projected by the board of engineers, which have not been commenced, and the estimate of their cost.

FIRST CLASS—TO BE COMMENCED AS SOON AS POSSIBLE.

Designation of the works.	Estimate of cost.
Fort St. Philip, Louisiana.....	\$77,810 79
Fort at Sollers's Point Flats, Patapsco river.....	673,205 44
Fort Tompkins, New York.....	420,826 14
Redoubt in advance of ditto.....	65,162 44
Fort at Wilkins's Point, New York.....	456,845 51
Fort at Throg's Point, New York.....	471,181 53
Fort at Dumpling's Point, Rhode Island.....	759,946 57
Fort at Rose island, Rhode Island.....	82,411 74
Dikes across west passage, Narraganset roads.....	205,000 00
For the defence of Boston harbor:	
Fort on George's island.....	458,000 00
Fort on Nantasket Head.....	539,000 00
Lunette in advance of ditto.....	79,000 00
Redoubt No. 2, in advance of ditto.....	32,000 00
Redoubt No. 1, (on Hog island,) in advance of ditto.....	29,000 00
Dike across Broad Sound passage.....	140,000 00
Cutting off the summit of Gallop island.....	2,429 00
Works for the defence of Conanicut island, Narraganset bay, Rhode Island.....	220,053 63
	4,531,873 10

SECOND CLASS—TO BE COMMENCED AT A LATER PERIOD.

Designation of the works.	Estimate of cost.
Fort at Grand Terre, in Louisiana.....	\$264,572 52
Tower at Pass au Heron, Mobile bay.....	16,677 41
Fort at Hawkins's Point, Patapsco river.....	244,337 14
Fort at St. Mary's, Potomac river.....	205,602 33
Fort opposite the Pea Patch, Delaware river.....	347,257 71
Fort at the Middle Ground, outer harbor of New York.....	1,681,411 66
Fort at East bank.....do.....do.....	1,681,411 66
Fort Hale, Connecticut.....	31,815 83
Fort Wooster, Connecticut.....	27,793 34
Fort Trumbull, Connecticut.....	77,445 21
Fort Griswold, Connecticut.....	132,230 41
Fort on Fort Preble Point, Portland harbor, Maine.....	103,000 00

SECOND CLASS—Continued.

Designation of the works.	Estimate of cost
Fort on House island, Portland harbor, Maine.....	\$32, 000 00
Fort Pickering, Salem.....	116, 000 00
Fort Naugus Head.....	35, 000 00
Fort Scawell, Marblehead.....	116, 000 00
Fort on Jack's Point, Marblehead.....	96, 000 00
Fort on Bald Head, North Carolina.....	120, 000 00
Fort on Federal Point, North Carolina.....	12, 000 00
	5, 340, 500 22

THIRD CLASS—TO BE COMMENCED AT A REMOTE PERIOD.

Designation of the works	Estimate of cost.
The rafts to obstruct the channel between—	
Forts Monroe and Calhoun.....	\$240, 568 00
Fort at Craney Island flats.....	258, 465 14
Fort at New Port News.....	244, 337 44
Fort on Naseway shoal.....	673, 205 00
For the defence of Patuxent river:	
Fort on Thomas's Point.....	173, 000 00
Fort on Point Patience.....	164, 000 00
Fort on the Narrows of Penobscot river, Maine.....	101, 000 00
	1, 854, 575 58

RECAPITULATION.

First class of works, (17).....	\$4, 531, 873 10
Second class of works, (19).....	5, 340, 500 22
Third class of works, (7).....	1, 854, 575 58
	11, 726, 948 90

REMARKS.

The classification in the statement, distinguishing three periods, exhibits the works enumerated in the order of their efficiency to meet the earliest possible emergency.

WASSISSA, Florida, September 25, 1832.

SIR: In the last communication I made you on the subject of the improvement of the navigation of the island passage between the St. Mark's and the St. John's rivers I stated that, at some future period, when better informed as to the operations of the tides and currents which seem to have formed most of the obstructions in the sounds along the seacoast of North America, I would report more fully on the means and additional funds necessary to secure the object for which the first appropriations were made and in part expended. In General Bernard's report the value of this navigation is estimated, not solely as a continuation of an inland passage along the Atlantic border of the United States, but as connected with the projected canal across the peninsula of Florida, so as to render more perfect the communication and to extend the security of canal and interior navigation between the eastern coast and the western waters. In this point of view the object becomes sufficiently enhanced to warrant, probably, a still further appropriation by government, more effectually to accomplish what has been but partially commenced. In my former report I stated that, instead of attempting to straighten and deepen the Amelia Narrows, (an exceedingly narrow and sinuous passage,) a canal has been substituted through the marsh, from a navigable point on Smith's creek, communicating with Bell's river, to a creek discharging into Amelia sound near the dividings or meetings of the tides flowing from contrary directions, by the Nassau and Amelia or Cumberland inlets. That by this project the distance was very considerably shortened, with a prospect of a deeper and more direct passage, and liable to fewer changes, than could possibly be obtained by the Amelia Narrows. In executing this work, however, it was found that, at a depth in the marsh corresponding very nearly with the level of low water, a semi-liquid of mud and water was encountered, not to be easily removed with the shovel, but when removed exposing the upper banks of the canal to cave in. Under these difficulties a greater width was given to the canal, and a greater slope to its banks; and, as the flood tide from Amelia inlet flowed to the northern mouth of the canal nearly one hour earlier than it did from the Nassau bar to the southern, so strong a current was created as to encourage the hope that from that cause the bottom of the canal would, in time, be washed to the depth desired. On two examinations of the cut at intervals the last year I found that I had not been disap-

pointed in this reasonable calculation. The canal had, in the course of a very few months, been widened and very considerably deepened, affording at high waters, according to the elevation of the tides, (which are very much influenced by the winds,) from six to eight feet water. Most of this mud, however, so removed (and which, from the widening of the canal, was greater than was expected) has been deposited at a point in the creek on the southern extremity of the canal where the current became too weak to force it into the deeper water of the sound, thus forming an impediment to the navigation which can only be passed by the larger vessels at high, and by the smaller vessels at half tide. Besides this, which is of a very inconsiderable extent, there are other mud-flat obstructions to a free navigation, which have been noticed by General Bernard, and which have not, as yet, been removed.

It is now proposed to perfect the whole navigation of the inland passage from the St. Mary's to the St. John's, by the use of one of those mud machines which have operated with so much success, under the direction of Lieutenants Ogden and Long, at Pass an Heron, in Alabama, and on the St. Mark's river, in Florida.

The sound between the St. Mary's and St. John's rivers passes generally through the low marsh lands subject to be flooded at very high tide. At no convenient place near either of the obstructions to be removed can accommodations for the workmen be erected, and as there are several of these mud-flats to be overcome, the erection or transfer of the sheds necessary would subject the work to be performed to additional contingent expenses; added to this, the constant flowings and reeedings of the tides every six hours leave but a very small proportion of the twenty-four for the spademen to excavate, without advertising to the probable retardation of the work otherwise, from the sickness of the men so exposed in an almost tropical climate. By the aid of the mud machine, where the whole operation is performed by machinery, and where the men may live and be protected while at labor, alike from the inclemency of the weather and the heat of the sun, the work may progress regularly and more effectually than by the direct application of the spade and shovel, and which can only be used at intervals between the ebb and flood tides. A greater depth of water may likewise be obtained at the points at present obstructed, as the machine can operate to a considerable depth below the water. The machine will, on the completion of the operation, still be of service for any other work the government may direct. The cost of the improvement to this branch of the inland navigation may be fairly estimated at very little more than the reparation and expense of keeping the mud machine in operation. From the experience acquired on the St. Mark's river, and where, from the shelly and rocky character of the obstructions removed, the machinery was liable to greater injury and required more frequent reparations, it has been found that \$400 per month was fully equal to all the costs and expenses of keeping the machine in operation; and in this sum is included not only the wages of the laborers employed, but \$100 per month to a superintendent on board. Assuming therefore this monthly expenditure as necessary, and the whole expense of removing all the obstructions between the St. Mary's and St. John's rivers may be thus estimated:

Cost of mud machine, including steam power, flats, cables, anchors, &c.	\$5, 000
Twelve months' constant use of the same, at \$400 per month.	4, 800
Contingencies.	700
	10, 500
Deduct unexpended balance of previous appropriations.	1, 500
	9, 000

The above amount, if judiciously expended agreeably to the plan suggested, will be found, it is believed, fully equal to the accomplishment of the object contemplated by this report.

Respectfully, your obedient servant,

JAMES GADSDEN, *Assistant Engineer.*

Annual report of the work done in improving the navigation of the Ohio and Mississippi rivers, from the 1st of October, 1831, to the 30th of September, 1832.

From the 1st of October, 1831, to the 1st of March, 1832, the steamboat Helepolis removed 961 snags and felled 1,095 trees from the banks. In the same time the steamboat Archimedes removed 526 snags from the channel, and felled some hundred trees from the falling banks of the river. On the 1st day of March those boats were laid up at St. Louis, the river being too high for them to operate. They were repaired and refitted, and commenced operations on the 16th of June last. Since that time the Helepolis has removed from the bed of the river 585 snags, and felled from the falling banks of the river 2,889 trees. In the same time the Archimedes has removed from the bed of the river 685 snags, and felled from the banks of the river 1,960 trees. The total number of snags removed in the year by the two boats is 2,757; the number of trees felled by the crews of the same boats in the year is 5,944, besides the whole number felled by the crew of the steamboat Archimedes, from the 1st of October, 1831, to the 1st of March, 1832, not enumerated. By a reference to the monthly reports from the captains of the two boats the department may see the part of the river from which the snags above alluded to have been taken; also the daily operations of those boats during the year. The whole line of operation for the year has been from Bayou Plaquemine to the Missouri river, a distance of about eleven hundred miles.

Three companies of men, of about forty each, were employed from the 1st of October to the 19th of January last felling timber from the banks. Two companies, of about fifty men each, commenced at the same service about the 15th of August last, up to the 30th of September. The banks have been cleared of the dangerous timber in the last year a distance of about two hundred and seventy miles.

On the Ohio river four machine boats were worked from the 30th of September to the 1st of December. They were again put in operation on the 10th of August last. They have been engaged removing logs, roots, and snags from the low-water channels of the Ohio river. In that time those four boats have removed 1,120 logs, roots, &c., of different sizes (from great to small) from the bottom of the Ohio river.

The improvement of the Ohio river, under the act of Congress of the 2d of March, 1831, for deepening the channel over the bars in that river, was commenced about the 1st of October last year, the water

being too high to commence operations at an earlier date. The fall being cold and the high stage of the water operated so much against that work that but little was done, except quarrying stone, making preparations, &c. In July last that work was again commenced. Two wing dams have been completed at French island, measuring together over one mile and a half in length; two at Scuffletown bars, upwards of three-quarters of a mile long; three at the Three Sister Islands, in length one and one-eighth mile; and one at the Three Mile Island bar, about half a mile in length. At those four bars the greatest difficulty in the low water navigation was formerly met with; frequently there was not more than eighteen to twenty-four inches of water to be found over the bars. Since the wing dams have been completed there has not been less than four feet water in the channels over them, although the water has been within a few inches of its lowest stage.

At the head of Cumberland island, a dam has been built across the main channel of the river, for the purpose of changing the channel to the left side of the island, so as to pass the town of Smithland and the mouth of the Cumberland river, by which means the bar at the entrance of the Cumberland river will be removed. A shoal in the Ohio river, at the foot of the island known by the name of the Cumberland bar, will also be shunned by the channel of the river being changed to the left side of the island. Much benefit will also be felt from this improvement by a large portion of the boats that pass down the Ohio when the water is below a medium stage. A large portion of these boats have passengers and freight to land at Smithland, which could not approach previous to this improvement. The dam is now nearly finished; the work will be completed in a few days should the laborers employed continue healthy.

There will probably be three more dams finished this fall, which will so far improve the river that boats may navigate it from the falls to the mouth, with three feet draft of water at the lowest stage—at least one-third more water than could be carried through that part of the river previous to the wing dams being commenced. This work, which was formerly viewed as an experiment, is now reduced to a practical certainty. The bars throughout the whole extent of the Ohio river can be removed in such a manner as to produce a safe and uniform navigation at its lowest stage of water with steamboats drawing four feet of water. Those five bars that have been operated on were by far the most difficult and shoalest in the Ohio from the mouth of the Scioto to the Mississippi river. By that system of improvement, the channels over the bars are made permanent; no shifting can possibly take place by the drifting of the sand, but the channel must remain in the same track from year to year; consequently, the navigation of the river will be much better understood than it now is. In the natural situation of the sand-bars in the Ohio, they are liable to have channels washed through them in different places, at the various stages of the river. When the water falls and become scarce, the pilots are very much at a loss to find the best pass over the bars. This difficulty is entirely removed by the wing dams, as the channel will forever remain in the same line, without a possibility of a change, with at least double the depth at extreme low water mark, that is to be found on the shoalest bars in their original forms.

Previous to this work being commenced, many persons objected to the plan, fearing injury from the wing dams at a medium stage of water. This objection is now removed from the mind of every man who has witnessed the effect, and seen the dams, since they have been constructed.

On the Mississippi river there have been five steamboats sunk within the last year, viz: the Favorite, Amazon, New York, Lady of the Lake, and Louisville. The circumstances of the losses of those boats are as follows: the Favorite was sunk by striking a log or root in a shallow pass, known by the name of Bordeaux chute, when the river was evidently too low for the boat to have passed through the chute. If she had not have been stove she must have turned back and taken the main channel of the river. This boat filled with water, settled on a bar in about 7 feet water. In this situation the captain and crew, except the mate and one man, left the wreck. In a few days the boat was left dry by the fall of water. The damage to the hull was but trifling, being a fracture in a plank on the starboard bow, and no timbers or frames broken. In this situation, the citizens from the opposite shore of the river attacked the boat, drove the mate and man into the woods, broke open the hatches, took out and carried away the most valuable part of her cargo, and set fire to the boat, and burned her with the remnant of cargo they had left on board. The New York struck a log that lies on the bottom of the river at Riddle's point, 82 miles below the mouth of the Ohio river, which stove in the bottom, and she sunk in a few minutes in about 5 feet water. This accident took place in the winter, when the Ohio, Upper Mississippi, Missouri, and all their tributaries were frozen. Consequently the Mississippi was extremely low and unsafe to navigate. The steamboat New York was built of oak, and was not considered a safe boat. At the time she was lost, she was making the last trip she probably would have made, as the owners were preparing a new hull to take the engine. The Amazon was a boat that had been to the Amazon river several years, at Mobile several more, and was very frail. She was lost on a snag or log that lay within fifteen or twenty feet of the bank of the river, and much closer to shore than any boat can ever be run in the Mississippi river with any degree of safety, as the shores must forever be lined with logs, stumps, roots, and other dangerous obstructions, until the forests on its banks have been entirely cleared away. The "Lady of the Lake" was sunk in August last, by striking so slightly that the shock was not perceivable by many persons on board. This boat was seven years old, and must have been rotten and unworthy of credit. The Louisville was lost in the Upper Mississippi. She was a substantial good boat, and was descending the river laden with lead. From some cause unknown to me, the boat was run down a small pass or chute to the extreme left of a large cluster of islands, when the channel, at the time she was lost, was on the extreme right, and not within one mile, in a direct line, to where the boat was stove and sunk. By bad management and want of skill in the masters or pilots, or from the age and unsafe condition of the boats, every one of those losses have occurred, and are by no means chargeable to the danger or difficulty of the navigation. Not one flatboat or craft of any kind has been lost within the last year, that has come within my knowledge.

A large proportion of the most dangerous obstructions have been removed from the bed of the Mississippi river. However, there are yet remaining many dangerous logs and snags to be removed. Most of them must be taken out at low water, at which time alone they are dangerous. When the river is at a medium stage and higher, the navigation is comparatively safe as far as relates to snags, &c., which have been formerly so much the most formidable enemy to the navigator and passenger, that all other risks were lost sight of. At the present time the snags are a minor risk compared with the bursting of boilers, burning boats, and running foul of each other.

The whole operation of improvement on the Ohio and Mississippi, under the several acts of Congress,

is now in successful operation, and much benefit may be expected from the improvements of the present fall and winter.

I am, sir, very respectfully, your obedient servant,

HENRY M. SHREVE, *Superintendent.*

Brigadier General C. GRATIOT, *Chief Engineer, Washington.*

UNITED STATES MILITARY ACADEMY, *West Point, June 16, 1832.*

SIR: The undersigned visitors to the Military Academy have endeavored to discharge with fidelity the trust confided to them. For two weeks they have been assiduously engaged in attending to the examination of the cadets in the various branches of their studies. They do not consider it necessary to present any detailed statement of the course of studies pursued or the manner of prosecuting it, inasmuch as these have been sufficiently explained by former visitors, and particularly by those who attended in the two preceding years. They take great pleasure in saying that, on the whole, they have found, during their stay, much to approve, nothing to condemn. Generally the young gentlemen have given the most satisfactory evidence of unwearied assiduity in the performance of their duties, and flattering pre-ages of the advantages which their country may expect to derive from their high qualifications. The benefits to be derived from this institution are gradually unfolding themselves, and time and accurate information only are wanted to satisfy the public that, for the general welfare, it should be cherished and sustained with a liberal hand. It is here that the science of engineering, with all its auxiliary branches, is thoroughly taught; conferring already important benefits on different sections of our country, and promising still greater. The young men educated here, from year to year, constitute the main reliance the country has for the successful prosecution of those great internal improvements which, in this enlightened age, the States are planning and executing. It is on this institution that dependence is to be placed for the elements of military science necessary for the defence and security of the country and its institutions in future times of war and danger. Nor are these all its benefits. Strong attachments and lasting friendships among the young gentlemen are here formed, which, carried with them to the different sections of our extensive territory, afford a happy guarantee of the stability and permanency of our Union. A moral influence like this may, in some future time of difficulty and threatened danger, restore harmony, stay the influence of angry passions, and prevent conflicts among ourselves. The expenses incurred in cherishing and sustaining so valuable an institution are, in the opinion of this board, of immaterial import, compared with the advantages which have been already conferred on the country, and the more important and lasting ones which are in promise.

Are these opinions correct? And if they are, wherefore is it that intelligent men should be found to disparage the institution? The answer is, because they have not the means and the information in relation to its detailed operations to enable them to judge correctly of the subject. Satisfied as to the impartiality of the opinions herein expressed, and as an evidence of our confidence in them, the propriety is respectfully suggested of selecting, annually, some persons as visitors who are known to be inimical to everything connected with the school. So soon as they shall learn the order, the intelligence, the moral deportment, and the useful acquirements of the young men here, that enmity, we are fully persuaded, will cease to exist. As it is not practicable, however, for the whole community to use the test of personal inspection, we will take leave, briefly, to reply to some of the objections which have been urged upon the public against the establishment. In the first place, party politics and sectarian religion have no place here; as between the professor and the student none other than official intercourse takes place between them. It is an imperative duty to attend church each Sabbath, where a sermon is preached. The door is never closed against respectable christian teachers of different persuasions who may happen to be here, and who may desire to preach. The minds of the cadets are not trammelled or attempted to be trammelled by the principles of any sect. Moral and religious truths and principles, in general, are inculcated; but the inculcation of the special tenets of particular sects is carefully excluded.

Prejudices and partialities entertained towards the cadets are charged upon the professors, who are said to act oftentimes under these influences. We do not hesitate to affirm that the allegation is gratuitous; that it is not supported by fact. The high character of the professors, and the absence of all motive to act thus, afford abundant refutation of the charge. But not content to rest our opinion on these circumstances alone, we have sought after information in other quarters, and feel ourselves, by the result, fully warranted in the assertion that there is no just foundation for the charge.

Every institution where the young are to be disciplined and trained to virtue must necessarily be governed by fixed and certain rules; and these should be strictly conformed to, or it is idle to enact them. They are bad legislators who would seek to waive an exact fulfilment of their laws; or, without adequate causes shown, to omit the enforcement of their penalties. The academic board, under the sanction of the Secretary of War, make known to each cadet confided to their care the rules and regulations of the school. These are plain and positive; and the penalties attached to any infraction of them are clearly defined. It is satisfactory to us to be able to state that very seldom do offences occur which come under the character of acts of immoral tendency. The correct principles of the cadets and their pride of character have operated as powerful restraints, and have made it hitherto scarcely necessary to prescribe any written rules of government, except such as relate to a proper attention to the studies which are pursued, and to the military discipline that is prescribed. The laws in regard to these matters and the penalties for any infraction of any of these laws are in the hands of every cadet. The first and principal offences are "mutinous conduct, absence from quarters after ten o'clock at night, breach of arrest, forcing a sentinel's post, gross disrespect to officers, irreverence at church, neglect of duty on post, profanity and other immoralities, refusing to do duty when ordered, ungentlemanly conduct, and the use of spirituous liquors." For the commission of any one of this class of offences, which it gives us great pleasure to repeat is of rare occurrence, the party is subjected to dismissal, or to receive, on the roll, ten marks of demerit. The next grade of offences subjects the cadet to eight marks, the next to five, the next to four, and so on. And for an offence of the seventh and last class, which consists "of being in bed after reveille or before tattoo, being out of order or late at inspections, bad order of rooms, or absent from the academy more than ten minutes without permission," the delinquent is subject to one mark on the demerit roll.

Thus it is shown that the rules impose no unreasonable restraints or burdens. A cadet who, in a

year, subjects himself to two hundred of these marks, as they are termed, and of which a regular register is kept, is liable to be dismissed from the institution. A list of offences charged in each week is regularly furnished on parade, that an opportunity may be afforded for such written defence and explanation as the delinquent may be able to offer. Upon this a decision is made, and the accusation is discharged or confirmed, agreeably to the circumstances of the case and the proof of delinquency. The whole proceeding is equitable and just, and nothing of prejudice or of unfairness influences the decision. It is the merit and demerit roll relative to the cadet's studies, his military duties, and his delinquencies which exclusively indicates his standing, his worth, and his claim to a continuance in the school. If prejudices exist, if partialities and dislikes influence the government and direction of the academy, we frankly assure you that our vigilance has not enabled us to discover them.

It may be said that most of these delinquencies are of light and trivial import, tending in nothing to affect moral standing, and therefore not meriting punishment so severe. That, in a moral aspect, they are trivial, is true, but this is no argument in favor of the offending cadet. The student who disregards the rules prescribed for his government gives an evidence that he is so constituted as to promise to be of little future utility to the country. He can never make a valuable and safe officer, well qualified to command, who does not first prove that he knows how to obey. To retain those who, for their own rule of action, would set up their own opinions and disregard the studies and course of duties prescribed to them, would be unjust to those who are disposed to act differently, a wrong done to postponed candidates, and eventually could not fail to impair, if not destroy, the high value of the institution. Wherefore was it established, and why has it been so long fostered by the government? Certainly not that it might dispense favors and charity; but rather to disseminate throughout the States military science and knowledge that, when war occurs and our institutions are threatened, the country may bring to her defence the arm which she has thus strengthened. It ought not and cannot be expected that those shall be retained and patronized who, being deficient in capacity, are unable to learn, or who, from habitual inattention, will not. From whichever cause arising, the consequence and the injury are the same to the country, and should therefore be avoided.

A further objection which has been advanced against the academy is that citizens are excluded from the army, because every vacancy that happens is to be supplied from the graduates of this institution. If this be a valid objection, it is the act of Congress that makes it so; and although, at first view, the objection may appear plausible, in reality it is not so. The industrious and regular habits and the scientific qualifications, which are required here in prosecuting the prescribed course of study, so pre-eminently fit the graduate for military service over others who have not had the same advantages, that it is difficult to believe any citizen could be associated with them in inferior commands without having such a feeling of inferiority as to make him dissatisfied with himself. The objection resolves itself into this: that it is a rule by which higher qualification claims, as it deserves, the ascendancy. And certainly that course of action cannot afford just cause of complaint which gives preference to a superior over an inferior claimant. In war the best means of defence and safety ought to be sought after, while in peace no wiser course of policy can be pursued than to prepare and treasure up the best materials, moral and intellectual, against the time when important exigencies may arise to require the use of them.

We take occasion to remark that the several professorships of this institution should be placed upon a better foundation. By the existing regulations assistants are assigned from the body of the army to take upon themselves the important task of instructing in their studies the young gentlemen of the academy. Lieutenants are selected as assistant professors and assigned to duty here. By the transfer they are not themselves benefitted; their condition is rendered nothing better than if they were to remain with their regiments. Their expenditures are in some degree increased, while their pay is not augmented. By remaining in the line an opportunity is offered of obtaining appointments in the staff, where an advance of pay is the consequence. Acting upon the universal rule of interest, it is reasonable to infer that, in peace, the preferences of junior officers will be for that service where substantial profit is more within their reach. A consequence of this is that, not unfrequently, assignments to the Military Academy are reluctantly accepted, and that reluctance produces a desire to be rid of the trust imposed as early as a favorable opportunity to do so can be found. Hence these appointments are frequently changed, and the mode of communicating instruction becomes variable and unduly. Other inconveniences are felt. The experience of the past shows that so soon as an officer, by dint of application, renders himself useful and respectable, he is taken away by a higher inducement offered by some literary institution, which thus obtains his time and services. The only means by which to prevent this is for the professors and assistants, at least as regards their compensation, to be placed upon a better footing. From the superintendent down the pay and emoluments which are allowed by the government are quite an inadequate return for the trusts which are so ably and faithfully discharged. The bare means of subsistence is but a poor and humble remuneration for a life usefully employed in the service of the country. Unquestionably parsimony in such matters is the very worst sort of economy.

We would also suggest the propriety of having an additional building erected for the accommodation of the cadets. To put three or four young gentlemen in a small room must, in some degree, deprive them of the ability of prosecuting their studies to advantage.

A house for divine service is also much wanted. The place at present used for that purpose is a room in one of the buildings, of insufficient size and inconvenient construction. Adjoining this is another apartment used for chemical lectures and experiments. The hazard which necessarily attends some of the experiments in the lecture room, admonishes us of the propriety of making it a detached and separate place, so constructed as to be fire-proof. This being done, and a professorship authorized, this branch of useful science will be placed upon a respectable footing.

The buildings in which the cadets are quartered are not as comfortable as they should be. They are badly ventilated; there is but a single window to each room, which occasions humidity and unpleasant scents to arise through the buildings. Windows placed opposite to the exterior ones, opening into the passage, would cost but little and be highly serviceable. The plank partitions, too, which separate the rooms should be removed and walls of brick or stone substituted. This would greatly protect the occupants against the noise of adjoining apartments, and conduce essentially to health and comfort.

The age fixed for the admission of cadets we consider objectionable, and request to draw your attention to the subject. At fourteen years, the minimum age specified by law, the mind is not sufficiently matured and disciplined to undertake the complicated and difficult studies which are prescribed here. For the education gratuitously bestowed at this place by the government, it contemplates a fair equivalent through a return of service at some time and in some form. In making selections, then, for the

academy, the question should be, in what way this end can be best secured? If the candidate be too young, loss to the government follows in money and time wasted on those who fail, and, finally, because the greater the number of dismissals, (delinquents' places not being supplied, except annually,) the more reduced will be the number who receive an education. Between the ages of fifteen and nineteen seems to be the more advisable periods at which young gentlemen should enter the academy. They will then complete their course at a time when the judgment will, in a good measure, be matured, and when it may not be entirely unsafe to entrust them with command; besides, a better opportunity will be afforded to parents to prepare their sons for admission. None should be appointed after they have passed the age of nineteen. After that age their habits are, perhaps, too rigidly fixed to be readily conformed to the course of discipline and instruction pursued here. Another advantage to be derived from the proposed change will be, that the stimulus of emulation will act more equally upon all when there is a nearer equality in the ages of the cadets in the same class.

It is also respectfully submitted whether the academic course of instruction should not be modified so as to embrace, more effectually, the whole of what is prescribed in the 34th article of the published regulations. The time now allotted to that department is not sufficient for the whole course. Hence a portion of what is prescribed in the article referred to is omitted. To remedy this, there must be an increase of time allowed or an increase of the pre-requisites of admission into the academy.

While a paternal care is taken of the moral department of the cadets, their pecuniary interests are properly regarded. By an existing regulation, their reasonable and necessary expenditures are registered and settled by an agent appointed for that purpose. From parents or friends they are forbidden to receive money, or if received, they are required to make deposit of it, to be expended only by permission of the superintendent. Thus are they guarded against everything like useless expenditure and formed to habits of economy. The poor and the wealthy are rendered, in a good degree, equal in their moneyed facilities, and everything like mortified feeling which could arise from such inequality of condition is avoided. In their apparel and in the furniture of their rooms all is neat, plain, and uniform in quality. The store which furnishes them with goods keeps in public view, for the inspection of all, its articles of merchandise, with the prices attached, previously agreed to and authorized by the board, by which means the regular rate of selling is known to every cadet. Than this nothing could be fairer or better arranged. If, as sometimes is the case, cadets are found to be indebted beyond the amount of pay that is due to them, they are forbidden to purchase any article not absolutely necessary, that, by a more rigid economy, the debt may be adjusted. They are thus early learned that debts are to be avoided, and instructed as to the best mode of discharging them if imprudently contracted.

Such are the suggestions which, in compliance with the request contained in your letter of appointment, we have thought proper to make concerning this institution. They are offered in perfect candor, and are the result of our own observation of the conduct and management of the academy and of the best reflection we have been able to give the subject while engaged in the discharge of the duty you did us the honor to confide to us. All of which is respectfully submitted.

HON. SECRETARY OF WAR.

No. 4.

REPORT FROM THE TOPOGRAPHICAL ENGINEER.

TOPOGRAPHICAL BUREAU, November 9, 1832.

SIR: In obedience to your instructions of the 29th of August last, I have the honor to submit to you—
 1st. A statement marked A, exhibiting the amount drawn from the Treasury Department, and remitted to the disbursing officers under this office from the 1st of October, 1831, to the 30th of September, 1832, inclusive; and also of the amount of accounts rendered.

2d. A statement marked B, exhibiting the amount expended during the same period on account of the surveys and examinations in relation to the summit level of the contemplated canal across the Isthmus of Florida.

The topographical and civil engineers have been employed upon, and the funds appropriated for surveys for the year 1832, have been applied to the following objects, viz.

1st. In completing the report and drawing of the survey of a canal route from Connecticut river to Lake Winnipisseege, New Hampshire, by the way of the valleys of the Oliverian and Baker's rivers.

2d. In completing the drawings of a canal route to unite the waters of Lake Champlain with those of the Connecticut, by the way of the valleys of the Onion and Will's rivers, in the State of Vermont.

3d. In completing the report, maps, and estimates, of the Taunton and Weymouth canal, Massachusetts.

- 4th. In making examinations and surveys in order to ascertain the practicability of making a railroad from Winchester to Harper's Ferry.
- 5th. In making a survey of a road from Potomac creek to Fredericksburg, Virginia.
- 6th. In completing the drawings of a reconnaissance of the sounds of North Carolina.
- 7th. In completing the drawings of a survey in order to ascertain the military defences of St. Mary's river, Maryland.
- 8th. In completing the drawings of a survey of Georgetown harbor, South Carolina, with a view to its military defence.
- 9th. In making a survey of a route for a railroad from St. Francisville, Louisiana, to Woodville, Mississippi.
- 10th. In making an estimate of the cost of constructing a canal to connect the waters of the Atlantic with those of the Gulf of Mexico.
- 11th. In surveying the route for a railroad between Williamsport, Pennsylvania, and Elmira, New York.
- 12th. In surveying the Neversink river, New York, with a view to its improvement.
- 13th. In surveying the Tennessee river, with a view to its improvement.
- 14th. In surveying the route for a railroad from the Hudson river to the portage summit of the Ohio canal.
- 15th. In surveying the route for a railroad from New London, Connecticut, to Worcester, Massachusetts.
- 16th. In surveying a route for a railroad from Stonington, Connecticut, to Providence, Rhode Island.
- 17th. In surveying the route for a railroad from Mad river to Lake Erie, in the State of Ohio.
- 18th. In surveying the Monongahela river, from Brownsville to Pittsburg, with a view to its improvement.
- 19th. In superintending the construction of the Boston and Providence, Baltimore and Susquehanna, and Patterson and Hudson river railroads.
- 20th. In superintending the construction of the Potomac bridge.
- 21st. In superintending the construction of the aqueduct across the Potomac river.
- 22d. In paying the salaries of the civil engineers and agents employed on several of the foregoing items of duties.

As regards the necessity of an increase of the corps of topographical engineers, I have to state that the views of the bureau have undergone no change since the submission of the annual report of the bureau of last year. The following extracts from that report will show the views of the bureau in relation to the necessity of an increase of the corps of topographical engineers, to meet the calls of the government for their services.

"The subject of an increase and better organization of the corps of topographical engineers, and of the inconveniences resulting from their present condition, has been so frequently alluded to in Executive communications, that I shall now only bring to your consideration such views as have not been previously presented. The able report on this subject from your predecessor, Mr. Eaton, fully exposes the military considerations of the case, and also the number and organization required by the present wants of the country. To this I have only to add, that the views therein unfolded are strengthened by every day's experience, and that the inconveniences resulting from a want of the organization proposed are continually increasing."

"The reasons which may be alleged in favor of the proposed increase in addition to those in the report alluded to, are such as apply to the survey of the coast."

"The law of the 14th of April, 1818, commits that duty to the army and the navy, and that part of the army to which this duty properly belongs is the topographical engineers. But owing to the few officers of this corps, and the pressing demand for their labors on other subjects, we have, as yet, done nothing under that law, except in such detail surveys of our harbors and bays, as were made with a view to their military defences, but which are highly valuable matter for purposes of filling up the cartoons of the general survey contemplated."

"The scientific education derived at our Military Academy furnishes the necessary elementary knowledge for this duty; and the military education acquired there, and in the army, establishes those habits of order, attention to duty, and subordination, necessary in every vocation of life, and without which no extensive operation can be judiciously or economically conducted. The government, therefore, has at its command valuable materials for filling up the proposed corps, in the officers of the proposed corps and those graduates of the academy who have been on duty with it, and others from that institution in the several corps of the army with officers capable at once of entering upon its duties and of rendering efficient services."

"In those services which would have to be performed in a survey of our coast, not only is mathematical knowledge requisite, but also a knowledge of, and a habit of accurately using the fine and delicate instruments required in the necessary observations. This last and valuable knowledge can be obtained by those only who possess the mathematical and mechanical information involved in the use and construction of the instruments; and with the elementary knowledge which, it is but fair to suppose, is already possessed by the class of individuals alluded to, there would only remain to be acquired a habit of accurately using the instruments."

"It is but just to state that the ability to use fine instruments, and to observe correctly with them, is a work of time and of careful attention. But if we are not adequately organized we cannot have officers to appropriate to that duty, and, of course, cannot say when the result of that time and careful attention will be possessed. If we have not, therefore, the necessary means we must continue defective in a correct knowledge of our own coast, and also defective in the practical skill of a branch of our own profession, the importance of which cannot be too highly estimated. In fact, everything depends upon it. It furnishes all the data for the calculations, and, if defective, all the calculations are but authentications of error."

"The requisite instruments have already been procured by the government at a great cost, and under the personal supervision of a gentleman highly gifted in those matters, and are now in deposit under the care of this office. It needs only means and time to apply them to their intended uses, and to reap from them the valuable results which they are so well adapted to yield."

"It appears to me entirely unnecessary to urge upon your notice the various commercial advantages which will result from an accurate knowledge of our maritime frontier, nor the value of this knowledge to its military defences. These considerations are self-evident, and need no argument to maintain them

But it may be urged that there is something due to our national character which requires that we shall be no longer entirely indebted to the imperfect efforts of other nations for information of our own coast, and that we should by our own labors add something to the general mass of scientific knowledge by at least correct determinations of the geography of our own country. The present effort may also be the origin of a school which may hereafter furnish individuals adequate, as well by their capacity to observe as to calculate the results of observations, to enter into fair and honorable competition with the distinguished astronomers of Europe, some of whom made their first essays while officers of a similar corps."

"The duties of a corps of topographical engineers are essentially military and scientific; hence the advantages of having military habits and education added to the scientific knowledge of its members."

"Its duties also benefit all the great interests of society, and eminently qualify its members for operations which might be considered as the peculiar province of the civil engineer. For instance, the survey of a country for military purposes furnishes also a good geographical map; the survey and construction of a road for military purposes, or for the transportation of the mail, is an equally good road for the merchant, the farmer, or the traveller; a canal for military purposes will serve equally well the wants of agriculture and commerce; and a survey of a bay or river, or harbor, in order to ascertain the military defences of either, furnishes also that precise knowledge of its shoals, bars, channels, tides, and currents, so valuable to the navigator. While a topographical officer, therefore, is collecting, in his military operations, the knowledge necessary for the military defences of the country, he also collects matter improving its geography and bearing essentially upon its commercial and agricultural prosperity."

"From the character of the duties of such a corps, it may be seen with what facility and advantage it may have its attention, when necessary, turned to objects purely civil; and that even while pursuing these purely civil objects, from its military knowledge, its labors will be enriched by all the military considerations which the operations may develop, so that the labors of this corps, if judiciously directed, cannot fail to furnish the government with the most correct knowledge of the resources of the country, civil and military; of its agricultural, commercial, mechanical, and mineralogical advantages; and of its military means of defence; as all these are subjects of investigation of a topographical engineer."

It will be seen by the statement B which accompanied the annual report of last year that of the amount of \$25,000, appropriated for surveys for the year 1831, 13,500 dollars was consumed in compensation to civil engineers. This expenditure was made necessary—1st, from the inadequate number of the present corps of topographical engineers, and, 2d, from the impossibility of supplying this inadequacy by detaching a sufficient number of officers from the army. Should the corps of topographical engineers, however, be enlarged, as proposed, the item of \$25,000 in the annual estimate of this bureau may be reduced to \$20,000, and admit of the execution of more duty than can be done with the present system with an appropriation of \$30,000.

Statement exhibited by the chief of the topographical bureau showing the amount which might be annually saved under an organization of the topographical engineers similar to that proposed by a bill reported to the Senate during its last session.

The corps to be composed of one colonel, one lieutenant colonel, two majors, ten captains, and ten first lieutenants, having the pay of the present corps of engineers.

The annual expenditure under which organization would be about \$24,300; and that sum divided by twenty-four, the number of officers of the proposed corps, gives the average annual cost of each \$1,013 nearly.

The annual cost of the present topographical engineers (10 officers) being..... \$13, 916
And of seven civil engineers and assistants acting as topographical engineers..... 13, 500

Shows the total annual cost under the present system to be (or an average for each engineer of \$1,613) 27, 416
Deducting from which the above sum 24, 300

There results—1st, an annual saving of 3, 116
2d, a gain of seven engineers;
3d, an average gain each per annum of \$600.

Respectfully submitted,

JAMES KEARNEY, *Lieut. Col. & T. E.*

Hon. LEWIS CASS, *Secretary of War.*

TOPOGRAPHICAL BUREAU, November 9, 1832.

No. 5

REPORT OF THE PAYMASTER GENERAL.

PAYMASTER GENERAL'S OFFICE, November 30, 1832.

SIR: I have the honor herewith to submit a tabular statement of the operations of the Pay department for one year, commencing the 1st of October, 1831, and terminating the 30th of September, 1832.

From this statement it will be seen that the advances made to paymasters within the year amount to \$1,231,075 68, of which sum but \$4,500 remain to be accounted for. This is exclusive of \$34,942 91 deducted from the estimates for the fourth quarter of 1831, and of \$25,781 63, the amount of unsettled balances, as stated in my last annual report, all of which have been fully accounted for.

The troops have been paid, generally, to later periods than heretofore, with the exception of those within Paymaster Forsyth's district, which he states was caused, in part, by changing their position in consequence of the late Indian war. I have every reason to believe that they were paid to the 1st of October, within that month, and that his accounts will be received in a few days.

When the army was reduced, in 1821, to its present organization, it was believed that it would require at least fifteen officers to pay it, in consequence of the numerous stations and their dispersed situation. Since that time the posts have been increased and extended, and the duty of paying the troops has become much more difficult. To this duty is added, by the act of July 14, 1832, that of paying all other troops that may be called into the service of the United States, without regard to numbers. Before the passage of this act the militia were generally paid by the officers of this department, but it was considered extra duty; and as they were subject to heavy deductions in the settlement of their accounts in consequence of the irregularity of the service, and the informality of the rolls and vouchers, on which they were compelled to pay, extra compensation was allowed for performing it. Since the reduction of the department in 1821 the number of militia in service, at any one time, was never so great as to make their payment burdensome until the present year. The number now to be paid exceeds ten thousand, and the rolls furnished the department for that purpose so defective that it was impossible to prepare complete pay-rolls from them; of course the duty of paymasters now is not only very great, but extremely hazardous, and will, I fear, prove ruinous to some, unless Congress should authorize an allowance to be made to them sufficient to reimburse, at least in part, the losses that may follow a careful performance of it.

No time was lost in preparing rolls, so far as it could be done, and submitting them to the accounting officers after the returns were received at this office, agreeably to your instructions; and the paymaster of this district was ordered to Illinois, in advance of the examinations of the rolls by the accounting officers, to make preparatory arrangements, and to assist in paying the militia of that State. The rolls have been forwarded to him from time to time, as soon as received from the comptroller; and from the energy and industry of the officers to whom the duty is assigned, I am confident the payment will be effected in the shortest time possible, so far as the funds will extend.

Respectfully, your obedient servant,

N. TOWSON, *Paymaster General.*

Hon. LEWIS CASS, *Secretary of War.*

Statement of the moneys drawn from the appropriations for the Pay department and remitted to the disbursing officers on account of payments for the fourth quarter of 1831 and the first three quarters of 1832; the amount unexpended and forming part of their estimates for the fourth quarter of 1832; the balances to be accounted for; the periods to which the troops have been paid, and accounts rendered.

No. 6.

REPORT FROM THE SUBSISTENCE DEPARTMENT.

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE,
Washington, November 22, 1832.

SIR: The statement which I now have the honor to submit in duplicate, agreeably to instructions from the Department of War of August 29, ultimo, exhibits the moneys remitted and charged to contractors and to the disbursing officers of the department in the 1st, 2d, and 3d quarters of the year, together with the balances due by them on December 31, 1831, amounting to..... \$294, 083 23
To which is to be added this sum, due to them on the settlement of their accounts..... 557 11

Making an aggregate of..... 294, 640 34
The amount accounted for is..... 252, 210 77

Leaving a balance of..... 41, 729 57

From which is to be deducted—

This sum, charged to contractors, not as remittances out of the annual appropriation, but as charges between the contract prices and purchases made by agents of the department to supply deficiencies..... \$330 83

This sum, being part of the balance in the hands of Lieutenant E. V. Sumner, which he has been ordered to deposit in the Branch Bank of the United States, at Buffalo, New York, to the credit of the Treasurer of the United States, thus reverting to the treasury..... 8, 000 00

Balance in the hands of Brevet Captain James Monroe September 30, ultimo, when his resignation took effect, not yet settled..... 4, 304 66

Making together..... 12, 635 49

And leaving an actual balance of..... 29, 094 08
in the hands of the assistant and acting commissaries at the expiration of the 3d and applicable to the expenditures of the 4th quarter of the year.

It affords me great satisfaction to state that, of the moneys charged and remitted during the period embraced, no loss whatever has been sustained by the government; and of ninety-seven officers disbursing, there are only two at remote posts whose accounts have not been received, and which, if at hand, would not materially affect the result of the statement.

Very respectfully, your obedient servant,

GEO. GIBSON, *Commissary General of Subsistence.*

Hon. LEWIS CASS, *Secretary of War.*

Statement exhibiting the moneys remitted to contractors from January 1 to September 30, 1832; the sums charged to them on account of failures, and the amounts accounted for by them; the balances in the hands of the disbursing officers of the department December 31, 1831; the moneys remitted to them in the first, second, and third quarters of 1832; the sums charged to them as transfers from one officer to another, on account of sales to officers on the frontier posts, sale of empty barrels, boxes, &c.; and the amounts accounted for by them for the same period; together with the balances in their possession at the expiration of the third quarter of the year.

No. 7.

REPORT FROM THE ORDNANCE DEPARTMENT.

ORDNANCE OFFICE, *Washington, November 24, 1832.*

SIR: In obedience to your orders of 20th August last, I have the honor to transmit a report of the general result of the proceedings and operations of this department between the 1st of October, 1831, and the 30th September, 1832, embracing also a view of its fiscal concerns, as they have transpired during the greater period between the 1st of January, 1831, and the 30th September, 1832.

The papers marked A and B present a general view of these concerns during the last-mentioned period, as well in regard to the amounts of the expenditures under the several heads of appropriations as in reference to their objects, and to the various ordnance stations where they have been made.

The first of these (A) shows the whole amount of funds remitted from the treasury to disbursing officers and contractors in this department during the year 1831 to have been \$811,400 77; that the portion of that sum which was expended and accounted for during the same period amounted to \$752,458 65; and that at the close of that year there remained unexpended and in the hands of disbursing officers the sum of \$58,942 12, a balance which, it may be proper to remark, was promptly liquidated by the responsible disbursing officers early in the first quarter of 1832.

Statement B exhibits the total amount of funds remaining in the hands of disbursing officers at the close of the year 1831, and which have been remitted to them and to contractors during the first, second, and third quarters of the year 1832. This amount will be seen to have been \$648,737 49, and the portion of this sum expended, and for which accounts have been rendered during the same period, will be seen in the same statement to have amounted to \$602,881 81, the unexpended balance exhibited in the same statement as being in the hands of disbursing officers at the close of the third quarter of 1832 having been \$45,885 68.

Statement C presents a view of the general result of the operations at the several arsenals and armories of the United States in the manufacture, repair, and purchase of some of the principal articles of ordnance, ordnance stores, and building materials. It exhibits the result of these operations to the extent to which they have been completed during the year between the 1st of October, 1831, and the 30th September, 1832, indicating, among other articles of ordnance and ordnance stores which have been fabricated or procured, the following, viz: of artillery, 133 32-pounder iron cannon, 11 24-pounder casemate and barbette-carriages, with implements complete, and 93 field-carriages, with implements complete; of small arms manufactured at the national armories, 27,453 muskets, complete, 3,490 Hall's rifles; of accoutrements for small arms, about 3,000 sets for infantry, 4,000 sets for riflemen, and 1,000 sets for cavalry.

Statement D shows the extent of the operations during the year between the 1st October, 1831, and the 30th September, 1832, which have occurred in procuring ordnance and ordnance stores, under the act of 1808, for arming and equipping the militia of the States and Territories. This statement presents also a view of the expenditures under the act which have resulted during the same period in procuring the stores, amounting, for all objects, to \$173,569 26. It exhibits, among other articles of ordnance stores procured, 84 field-carriages, with their implements complete; 8,000 muskets complete; 740 Hall's rifles; about 2,400 sets of infantry accoutrements; 3,151 sets of rifle accoutrements, and 2,087 pairs of holsters.

Statement E exhibits the amount of ordnance and ordnance stores, valued in muskets, which have been apportioned for the year 1831 to the several States and Territories, under the act of 1808, for arming and equipping the militia, this apportionment being founded on the most recent returns of the strength of the militia, as made by the adjutants general of the militia of the States to the adjutant general of the army.

Statement F shows the several articles of ordnance and ordnance stores which have been distributed to the militia of the States and Territories during the year between the 1st of October, 1831, and the 30th September, 1832, the distribution being in accordance with the last apportionment, and with the balances due on apportionments made prior to that of the year 1831. In this statement will be perceived, among other articles distributed, 17 pieces of field artillery; 23 field-carriages and equipments, complete; 21,070 muskets, rifles, carbines, and pistols; 2,739 artillery and cavalry swords; 5,767 sets of accoutrements for small arms, and 1,100 sets of cavalry accoutrements.

Statement G presents a view of the amount of munitions of war issued by this department during the year between the 1st of October, 1831, and the 30th September, 1832, to the army, to the militia in the service of the United States, to the Engineer department, and to the State of South Carolina on the last war account. These issues, it will be perceived, have been unusually large, a circumstance which has proceeded principally from the necessity of arming and equipping considerable bodies of the militia acting in the service of the United States on the occasion of the late Indian disturbances on the north-western frontier.

Statement H presents a view of the result of the operations of the United States lead mines for a period of ten years, ending with the 30th September, 1832, during which time, it is perceived by the statement, that about 56,000,000 pounds of lead have been manufactured at the mines, and that in the year ending with the 30th September, 1832, there were manufactured but 4,281,876 pounds, an amount falling short of that of the preceding year by 2,167,204 pounds. This deficiency is explained partly from the fact that during the last year no lead had been drawn, as in preceding years, from the mines of Missouri, no leases having been granted in Missouri since the passage of the act of March 3, 1829, authorizing the sale of all the mineral lands in that State, and the amounts of all such as had not expired at the date of that act having been settled, and partly from the early commencement of the last winter, which arrested the operations on the Upper Mississippi much earlier in the season than usual. But the deficiency must be attributed mainly to the general derangement and interruption of business during the greater part of the last summer in consequence of the war with the Indians on that frontier.

I have the honor to be, sir, respectfully, your obedient servant,

GEORGE BOMFORD, *Colonel of Ordnance.*

HON. LEWIS CASS, *Secretary of War.*

A.

^o Nothing has been done in Missouri since the passage of the act of March 5, 1829, authorizing the sale of the lead mines in that State, besides attempting to settle the accounts of the leases which had been previously granted; and these settlements appear to be now closed. G. B.

No. 8.

REPORT OF THE SURGEON GENERAL.

SURGEON GENERAL'S OFFICE, *October 20, 1832.*

SIR: In compliance with your instructions I herewith enclose duplicate estimates of the expenses of the medical department of the army and of the Surgeon General's office for the year 1833. The amount drawn and remitted to the acting apothecary from the commencement of the present year to the termination of the third quarter has been \$10,911, and the amount of accounts rendered and settled by him in the same period has been \$10,846 22. Of the expenditures made on account of the Medical department by the officers of the Quartermaster's department during the same period accounts have been rendered and settled to the amount of \$7,998 76. In consequence of the movements and sickness on the northwest frontier the expenses of the year will be somewhat greater than heretofore, and a small addition has been made to the estimate for medicines, hospital stores, and bedding.

All the officers of the department are on duty and under orders, except four, one of whom is on furlough, one in arrest by the civil authority, and two are unfit for duty in consequence of ill health.

The several reports and returns required by the regulations of the department have been duly received, and all public property under the charge of the surgeons has been satisfactorily accounted for. The number of deaths reported in hospital during the year ending June 30th has been 109, of which 18 were from consumption, 16 from intemperance and accidents, leaving 75 from all other causes.

Allow me again respectfully to call the attention of the department to the several memorials presented, and the several reports made in relation to graduating the pay of surgeons of the army in proportion to their term of service, and especially as they are now the only subordinate officers of either army or navy whose pay has not been increased. In 1816 an additional ration was allowed to all lieutenants of the army, and subsequently an additional ration to both captains and lieutenants, with \$10 per

month to the former while on duty with their companies. In 1828 an addition of \$10 per month and one ration per day was made to lieutenants of the navy, and in the same year the pay of the surgeons and assistant surgeons of the navy was increased after the periods of five and ten years service. The senior surgeon after ten years, and 'while in actual service at sea,' receives \$85 per month more than the junior assistants, and \$37 per month more than the full pay and emoluments of the army surgeon when on actual duty with his regiment; while the latter can at no period and under no circumstances receive above \$11 per month more than the junior assistant, or than he did at his first appointment."

Very respectfully, your obedient servant,

JOSEPH LOVELL, *Surgeon General.*

Hon. LEWIS CASS, *Secretary of War.*

No. 9.

REPORT OF THE COMMISSARY GENERAL OF PURCHASES.

COMMISSARY GENERAL'S OFFICE, *Philadelphia, October 18, 1832.*

Sir: In obedience to your instructions dated on the 21st September, 1832, I have prepared and have now the honor to enclose five statements, as follows, viz:

No. 1. Statement of moneys drawn from the appropriation for the purchasing department during the first three quarters of the year 1832.

No. 2. Statement of moneys received and disbursed during the first three quarters of the year 1832 on account of the purchasing department.

No. 3. Statement of moneys disbursed during the first three quarters of the year 1832 on account of the appropriation for the purchase of woollens, per act of 1829.

No. 4. Statement of moneys received and disbursed during the first three quarters of 1832 on account of the contingencies of the army.

No. 5. Statement of moneys received and disbursed during the first three quarters of 1832 on account of the appropriation for carrying into effect certain Indian treaties, per act 2d March, 1831.

I have the honor to be your obedient servant,

CALENDER IRVINE.

Hon. LEWIS CASS, *Secretary of War.*

No. 1.

Statement of moneys drawn from the appropriation for the purchasing department (for 1832) during the first three quarters of 1832.

April 23, 1832. By Secretary of the Treasury's warrant, No. 614.....	\$40,000 00
June 11, 1832. By Secretary of the Treasury's warrant, No. 976.....	30,840 32
July 12, 1832. By Secretary of the Treasury's warrant, No. 1230.....	26,343 65
August 16, 1832. By Secretary of the Treasury's warrant, No. 1496.....	25,000 00
September 13, 1832. By Secretary of the Treasury's warrant, No. 1725.....	20,066 19
	<u>142,250 16</u>

COMMISSARY GENERAL'S OFFICE, *Philadelphia, October 18, 1832.*

C. IRVINE, *Commissary General of Purchases.*

Hon. LEWIS CASS, *Secretary of War.*

No. 2.

Statement of moneys received and disbursed during the first three quarters of the year 1832, on account of the purchasing department.

To amount of moneys drawn from the Treasury Department between January 1 and September 30, 1832, as per statement No. 1.....	\$142,250 16
By amount expended during the first quarter of 1832, passed to the credit of C. Irvine, commissary general of purchases, per account settled by the Second Auditor of the Treasury Department.....	\$11,971 19
By amount expended during the second quarter of 1832, and credited as above, as per account settled by the Second Auditor of the Treasury Department.....	54,828 20
By amount expended during the third quarter of 1832, as per account in preparation for transmission to the Second Auditor of the Treasury Department for examination and settlement.....	69,525 73
	<u>136,325 12</u>
Add this sum, \$10,000, expended during the second and third quarters of 1832, on account of the purchase of woollens in advance, per act of 1829, as per statement No. 3, borrowed in November, 1831, and repaid by disbursements on said account.....	10,000 00
Carried forward.....	146,325 12
	142,250 16

Brought forward.....	\$146,325 12	\$142,250 16
Deduct this sum, embraced in the above expenditures, being bills paid for goods furnished in 1831, the appropriation falling short of the amount of accounts rendered for settlement.....	4,967 57

22D CONGRESS.]

No. 533.

[2D SESSION.]

CONSOLIDATION AND ADAPTATION OF EXISTING LAWS TO THE PRESENT MILITARY ESTABLISHMENT OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 10, 1832.

DEPARTMENT OF WAR, *December 8, 1832.*

SIR: In conformity with a resolution of the House of Representatives of May 7, 1832, I have the honor to transmit a report containing a "revision of the acts of Congress" so "amended and altered as to render them better adapted to the military establishment of the United States," and "digested into one act."

This report has been prepared under my superintendence by Captain Mordecai, of the ordnance corps. It is only necessary in reference to the execution of the duty to observe that the terms of the resolution restricted the action of this department to a consolidation of the various existing laws into one, and to their amendment and alteration so far as a better adaptation to the present military establishment required. Further than this I have not deemed it my duty to go, and the *projet* will, therefore, be considered, not as presenting any peculiar views of this department, but as an attempt to reconcile the various and frequently doubtful, if not contradictory, provisions of the several acts which now regulate the military establishment of the United States.

I have the honor to be, very respectfully, your obedient servant,

LEWIS CASS.

HON. ANDREW STEVENSON, *Speaker of the House of Representatives*

AN ACT concerning the military establishment of the United States.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, and it is hereby enacted, as follows, to wit:

CHAPTER I.

Of the military peace establishment.

SECTION 1.—*Of the artillery.*

ARTICLE 1. There shall be four regiments of artillery.

ARTICLE 2. Each regiment shall consist of one colonel, one lieutenant colonel, one major, one adjutant, who shall be taken from the subalterns of the regiment, one sergeant major, one quartermaster's sergeant, and nine companies.

ARTICLE 3. Each company shall consist of one captain, two first lieutenants, two second lieutenants, four sergeants, four corporals, three artificers, two musicians, and forty-two privates.

ARTICLE 4. One company of each regiment shall be designated and equipped as light artillery.

SECTION 2.—*Of the infantry.*

ARTICLE 5. There shall be seven regiments of infantry.

ARTICLE 6. Each regiment shall consist of one colonel, one lieutenant colonel, one major, one adjutant, who shall be taken from the subalterns of the regiment, one sergeant major, one quartermaster's sergeant, two principal musicians, and ten companies.

ARTICLE 7. Each company shall consist of one captain, one first lieutenant, one second lieutenant, three sergeants, four corporals, two musicians, and forty-two privates.

SECTION 3.—*Of the mounted rangers.*

ARTICLE 8. There shall be a *corps* of mounted rangers which shall consist of one major and six companies.

ARTICLE 9. Each company shall consist of one captain, one first lieutenant, two second lieutenants, five sergeants, five corporals, and one hundred privates.

SECTION 4.—*Of the general officers and their aides-de-camp.*

ARTICLE 10. There shall be one major general and two brigadier generals.

ARTICLE 11. A major general shall have two aides-de-camp; a brigadier general, one aide-de-camp.

ARTICLE 12. The aides-de-camp shall be taken from the subalterns of the line of the army.

SECTION 5.—*Of the Adjutant General's department.*

ARTICLE 13. There shall be one adjutant general, with the rank of colonel.

ARTICLE 14. The aides-de-camp of general officers shall, in addition to their other duties, perform those of assistant adjutant general.

ARTICLE 15. *The officers of the Adjutant General's department shall perform such duties as may be required of them, according to military usage and regulations, relative to the distribution of orders to the troops, details of service, military correspondence, and other duties of like nature.*

SECTION 6.—*Of the Inspectors' department.*

ARTICLE 16. There shall be two inspectors general, with the rank of colonel.

ARTICLE 17. *The officers of the Inspectors department shall perform such duties as may be required of them, according to military usage and regulations, relative to mustering and inspecting the troops, and other duties of like nature.*

SECTION 7.—*Of the Topographical department.*

ARTICLE 18. There shall be six topographical engineers, with the rank of major; and four assistant topographical engineers, with the rank of captain.

ARTICLE 19. *The officers of the Topographical department shall perform such duties as may be required of them, according to military usage and regulations, relative to reconnoitering, making surveys and plans, and other duties of like nature.*

SECTION 8.—*Of the Quartermaster's department.*

ARTICLE 20. There shall be one quartermaster general, with the rank of brigadier general; four quartermasters, with the rank of major; and twenty assistant quartermasters, who shall be taken from the officers of the line of the army.

ARTICLE 21. It shall be the duty of the officers of the Quartermaster's department to *provide quarters for the troops*, and, when directed by the Secretary of War, to procure and issue military stores and other supplies requisite for their use; also to provide means of transportation for the troops, and for the clothing, stores, artillery, and camp and garrison equipage intended for the military service.

ARTICLE 22. The quartermaster general shall, under the direction of the Secretary of War, prescribe a system of accountability for the clothing and camp and garrison equipage issued to the troops; and he shall be responsible for the regularity and correctness of all returns in the Quartermaster's department.

ARTICLE 23. Assistant quartermasters shall, in addition to their other duties, be subject, under the orders of the Secretary of War, to do duty in the Subsistence department.

ARTICLE 24. The *senior officer* of the Quartermaster's department, attached to any separate army, command, or district, shall be authorized, with the approbation and under the direction of the Secretary of War, to employ as many artificers, mechanics, and laborers as the public service may require.

SECTION 9.—*Of the Subsistence department.*

ARTICLE 25. There shall be one commissary general of subsistence, with the rank of colonel; one commissary, with the rank of major; one other commissary, who shall be taken from the officers of the line of the army; and as many assistant commissaries as the service may require, not exceeding fifty, who shall be taken from the subalterns of the line.

ARTICLE 26. It shall be the duty of the officers of the Subsistence department, under the direction of the Secretary of War, to procure and issue rations for the troops.

ARTICLE 27. Assistant commissaries of subsistence shall, in addition to their other duties, be subject, under the orders of the Secretary of War, to do duty in the Quartermaster's department.

SECTION 10.—*Of the Purchasing department.*

ARTICLE 28. There shall be one commissary general of purchases, and two military storekeepers, to be attached to the Purchasing department.

ARTICLE 29. The commissary general of purchases shall be appointed for the term of four years.

ARTICLE 30. It shall be his duty, under the direction of the Secretary of War, to procure clothing and camp and garrison equipage for the troops.

SECTION 11.—*Of the Pay department.*

ARTICLE 31. There shall be one paymaster general, and fifteen paymasters, one of whom shall be taken from the subalterns of the corps of engineers.

ARTICLE 32. All officers of the Pay department shall be appointed for the term of four years.

ARTICLE 33. It shall be the duty of the paymasters to pay the troops. The paymaster general shall perform the duties of his office agreeably to the directions of the *Secretary of War*.

ARTICLE 34. Each paymaster shall be allowed a capable non-commissioned officer as a clerk.

ARTICLE 35. The troops shall be paid once, at least, if it be practicable, in every term of two months.

ARTICLE 36. Each paymaster shall make, once in two months, to the paymaster general, a correct report, showing the disposition of the funds previously transmitted to the said paymaster, and containing an accurate estimate for the next payment of such of the troops as it may be his duty to pay.

ARTICLE 37. No assignment of pay made by a non-commissioned officer or private soldier shall be valid.

SECTION 12.—*Of the Medical department.*

ARTICLE 38. There shall be one surgeon general, and twelve surgeons, and fifty-five assistant surgeons.

ARTICLE 39. *The officers of the Medical department, besides performing professional services for the troops, shall, under the direction of the Secretary of War, procure and issue medicines and hospital stores and supplies for their use.*

SECTION 13.—*Of the Engineer department.*

ARTICLE 40. There shall be a corps of engineers, which shall consist of one colonel, one lieutenant colonel, two majors, six captains, six first lieutenants, and six second lieutenants.

ARTICLE 41. The selection of the commander of the corps of engineers shall not be confined to that corps.

ARTICLE 42. The officers of the corps of engineers shall *superintend the construction of military works*,

and shall be subject at all times to do duty in such places and on such service as the President of the United States shall direct.

ARTICLE 43. A military academy shall be established at West Point, in the State of New York. *It shall be conducted by the commander of the corps of engineers, under the direction of the President of the United States.*

ARTICLE 44. It shall consist of the corps of engineers and the following officers, to wit: a professor and an assistant professor of natural and experimental philosophy; a professor and an assistant professor of mathematics; a professor and an assistant professor of the art of engineering; a chaplain, who shall be also professor of geography, history, and ethics; a teacher of the French language; and a teacher of drawing.

ARTICLE 45. *One of the officers of the corps of engineers shall be the superintendent of the Military Academy, and, in his absence from the academy, the officer highest in rank of the said corps, present then on duty, shall perform the duties of superintendent.*

ARTICLE 46. The professors and assistant professors of philosophy, mathematics, and engineering may be taken from the corps of engineers; *and the President of the United States may attach to the Military Academy such other officers of the army as may be necessary to perform the duties of instructors.*

ARTICLE 47. The academical staff, as such, shall not be entitled to any command in the army separate from the academy.

ARTICLE 48. The Secretary of War shall cause to be procured, at the public expense, under such regulations as shall be directed by the President of the United States, the necessary tools, implements, and apparatus for the use of the Military Academy.

ARTICLE 49. The President of the United States may appoint cadets of the army, not exceeding two hundred and sixty in number.

ARTICLE 50. No person shall be appointed a cadet who, at the time of his appointment, shall be less than fourteen or more than twenty-one years of age; and each cadet, previous to his appointment, shall be well versed in reading, writing, and arithmetic; and shall, with the consent of his parent or guardian, sign articles by which he shall engage to serve five years, unless sooner discharged.

ARTICLE 51. The cadets shall be attached, as students, to the Military Academy; but they shall be subject at all times to do duty in such places and on such service as the President of the United States may direct. They shall be arranged into companies, to each of which there shall be added four musicians; and they shall be instructed in all the duties of privates, non-commissioned officers, and officers, and in all those incident to a regular camp, for which purpose they shall be encamped at least *two months* in each year.

ARTICLE 52. When a cadet, after having gone through all the classes at the Military Academy, shall have received a regular degree from the academic staff, he shall be considered a candidate for a commission in any *regiment or corps* of the army the duties of which he may be judged competent to perform; and in case there shall not at the time be a vacancy in such *regiment or corps*, he may be attached to it, at the discretion of the President of the United States, by brevet of the lowest grade, until a vacancy shall happen; provided, that there shall not be more than one supernumerary officer to any one company at the same time.

SECTION 14.—Of the Ordnance department.

ARTICLE 53. There shall be an ordnance *corps*, which shall consist of one colonel, one lieutenant colonel two majors, and ten captains.

ARTICLE 54. The President of the United States may cause to be selected from the regiments of artillery as many subalterns as he may deem necessary for duty in the ordnance department.

ARTICLE 55. *It shall be the duty of the officers of the ordnance department to provide, preserve, and issue to the troops ordnance and ordnance stores for the military service, including cannon and other pieces of ordnance, cannon balls, shot, shells, carriages, ammunition wagons, forges, artificers' wagons, small arms, side arms, and other equipments, gunpowder, all kinds of ammunition and ordnance stores, and materials, implements, and apparatus of ordnance requisite for garrison, field, or siege service.*

ARTICLE 56. The Secretary of War may appoint as many ordnance sergeants as the service may require, not exceeding one for each military post. They shall be selected from the sergeants of the army who shall have faithfully served not less than eight years, during at least four of which they shall have been non-commissioned officers.

ARTICLE 57. The ordnance sergeant at any military post shall, under the direction of the commanding officer of the post, and according to such regulations as shall be prescribed by the Secretary of War, receive and preserve the ordnance and ordnance stores of the post.

ARTICLE 58. The chief of the Ordnance department shall, under the direction of the Secretary of War, enlist as many master armorers, master carriage-makers, master blacksmiths, artificers, armorers, carriage-makers, blacksmiths, and laborers, as the public service in the ordnance department may require, not exceeding, in all, two hundred and fifty.

ARTICLE 59. He shall attach to any separate body of troops the necessary artificers and other workmen, with proper carriages and equipments, under such regulations and restrictions as to their government and number as the Secretary of War shall direct.

ARTICLE 60. He shall direct the inspection and proof of all ordnance and ordnance stores purchased for the military service, and the construction and preparation of such as may be manufactured or prepared in the ordnance department.

ARTICLE 61. He shall furnish estimates, and, under the direction of the Secretary of War, shall make the necessary contracts and purchases for procuring supplies of ordnance and ordnance stores.

ARTICLE 62. He shall make to the War Department half yearly, or oftener if so directed, a correct report, in such form as the Secretary of War shall prescribe, of the officers and other persons, and of the ordnance and ordnance stores, in the ordnance department.

ARTICLE 63. The chief of the Ordnance department, or the senior officer of that department in any separate army, command, or district, shall execute the orders of the Secretary of War, and, in time of war, the orders of any general or field officer commanding any army, garrison, or detachment, for the supply of ordnance and ordnance stores for garrison, field, or siege service.

ARTICLE 64. The President of the United States shall cause to be established and preserved the armories and arsenals which may be deemed necessary for the manufacture, repair, and preservation of

ordnance and ordnance stores for the military service; but no such armory or arsenal shall be erected in any State until a cession or purchase of the land necessary for its accommodation shall have been made, on behalf of the United States, with the consent of the legislature of the State.

ARTICLE 65. In each armory there shall be employed one superintendent, who shall be appointed by the President of the United States, and who shall receive one hundred dollars a month and four rations a day, or an equivalent in money; one master armorer, who shall be appointed in like manner, and shall receive fifty dollars a month and two rations a day, or an equivalent in money; and as many workmen as the Secretary of War shall deem necessary.

ARTICLE 66. The *chief* of the Ordnance department shall establish such depots of ordnance and ordnance stores as the Secretary of War may deem necessary.

ARTICLE 67. The armories and arsenals of the United States shall be placed under the direction of the Ordnance department.

ARTICLE 68. The *chief* of the Ordnance department shall, under the direction of the Secretary of War, prescribe a system of regulations for the government of persons employed in the armories and arsenals, and for the manufacture, repair, and preservation of ordnance and ordnance stores.

ARTICLE 69. The officer or other person in charge of any arsenal, depot, or magazine, shall make to the chief of the Ordnance department, quarterly, or oftener if so directed, a correct return, in such form as may be prescribed, of all ordnance and ordnance stores in his charge.

ARTICLE 70. An account of the expenses of the national armories, and of the arms made and repaired therein, shall be annually laid before Congress.

ARTICLE 71. Any person retained or employed in any arsenal or armory of the United States who shall wantonly or carelessly break, impair, or destroy any implements, tools, or utensils, or any stock or materials for making guns, the property of the United States; or who shall wilfully and obstinately refuse to perform the services lawfully assigned to him, pursuant to his contract, shall forfeit for every such offence a sum not exceeding twenty dollars, to be recovered in any court having jurisdiction of the offence.

ARTICLE 72. Any person who shall procure or entice any artificer or workman retained or employed in any arsenal or armory of the United States to depart from the same during the term of his engagement, or to avoid or break his contract with the United States; or who, after due notice of the engagement of any such artificer or workman, shall, during the continuance of such engagement, retain, hire, or in any wise employ, harbor, or conceal such artificer or workman, shall, upon conviction before any court having cognizance of the offence, be fined, at the discretion of the court, in any sum not exceeding fifty dollars, or be imprisoned for any term not exceeding three months.

SECTION 15.—*Of pay and emoluments.*

ARTICLE 73. There shall be allowed to the officers and other persons in the military peace establishment of the United States pay and emoluments as follows, to wit:

1. To a major general, two hundred dollars a month, fifteen rations a day, forage for seven horses, and four servants.

2. To a brigadier general and to the quartermaster general, each, one hundred and four dollars a month, twelve rations a day, forage for five horses, and three servants.

3. To an aide-de-camp to a major general, twenty-four dollars a month, in addition to his pay in the line, and forage for two horses, *if not otherwise entitled to forage.*

4. To an aide-de-camp to a brigadier general, twenty dollars a month, in addition to his pay in the line, and forage for two horses, *if not otherwise entitled to forage.*

5. To the adjutant general and to an inspector general, each, ninety dollars a month, six rations a day, forage for five horses, and two servants.

6. To the commissary general of subsistence, ninety dollars a month, six rations a day, forage for four horses, and two servants.

7. To a topographical engineer, to a quartermaster, and to the commissary of subsistence, having the rank of major, each, sixty dollars a month, four rations a day, forage for four horses, and two servants.

8. To an assistant quartermaster, and to the other commissary of subsistence, each, not less than ten nor more than twenty dollars a month, in addition to his pay in the line, to be regulated by the Secretary of War, and forage for two horses, *if not otherwise entitled to forage.*

9. To an assistant commissary of subsistence, not less than ten nor more than twenty dollars a month, in addition to his pay in the line, to be regulated by the Secretary of War.

10. To the commissary general of purchases, three thousand dollars a year.

11. To a military storekeeper in the purchasing department, a salary not exceeding the pay and emoluments of a captain of infantry, to be regulated by the Secretary of War according to the duty which the storekeeper may perform.

12. To the paymaster general and to the surgeon general, each, two thousand five hundred dollars a year.

13. To a surgeon, forty-five dollars a month, three rations a day, forage for two horses, and one servant.

14. To an assistant surgeon, forty dollars a month, two rations a day, forage for two horses, and one servant.

15. To a colonel, seventy-five dollars a month, six rations a day, forage for four horses, and two servants.

16. To a lieutenant colonel and to the professor of natural and experimental philosophy in the Military Academy, each, sixty dollars a month, five rations a day, forage for three horses, and two servants.

17. To a major, to a paymaster, to a chaplain, and to the professor of mathematics and the professor of the art of engineering in the Military Academy, each, fifty dollars a month, four rations a day, forage for three horses, and two servants.

18. To an adjutant, ten dollars a month, in addition to his pay in the line, and forage for two horses, *if not otherwise entitled to forage.*

19. To a captain, to an assistant topographical engineer, and to the assistant professor of philosophy, the assistant professor of mathematics, the assistant professor of the art of engineering, the teacher of the French language, and the teacher of drawing in the Military Academy, each, forty dollars a month, four rations a day, and one servant.

20. To a first lieutenant, thirty dollars a month, four rations a day, and one servant.

21. To a second lieutenant, twenty-five dollars a month, four rations a day, and one servant.
22. To each captain and subaltern of the corps of mounted rangers, forage for two horses, in addition to the other emoluments of his grade.
23. To a graduate of the Military Academy attached by brevet to any regiment or corps, the pay and emoluments of his brevet grade.
24. To a cadet, sixteen dollars a month and two rations a day.
25. To a sergeant major and to a quartermaster's sergeant, each, nine dollars a month and one ration a day.
26. To an ordnance sergeant, thirteen dollars a month and one ration a day.
27. To a sergeant of artillery or infantry and to a principal musician, each, eight dollars a month and one ration a day.
28. To a corporal of artillery or infantry, seven dollars a month and one ration a day.
29. To an artificer of artillery, ten dollars a month and one ration a day.
30. To a musician, six dollars a month and one ration a day.
31. To a private of artillery or infantry, five dollars a month and one ration a day.
32. To a non-commissioned officer and to a private of the corps of mounted rangers, each, one dollar a day, in full compensation for his services and the use of his arms and horse.
33. To a master armorer, a master carriage-maker, and a master blacksmith, of the ordnance department, each thirty dollars a month and one ration and a half a day.
34. To an armorer, a carriage-maker, and a blacksmith, of the ordnance department, each sixteen dollars a month and one ration and a half a day.
35. To an artificer of the ordnance department, thirteen dollars a month and one ration a day.
36. To a laborer of the ordnance department, nine dollars a month and one ration a day.

ARTICLE 74. There shall also be allowed:

1. To the commanding officer of each separate post, such additional number of rations daily as the President of the United States shall, from time to time, direct, having respect to the special circumstances of each post.

2. To each officer in the actual command of a company, ten dollars a month, in addition to his other pay, as a compensation for his duties and responsibilities with respect to the clothing, arms, and equipments of the company.

3. To an officer having a brevet commission, the pay and emoluments of his brevet grade when on duty, and having a command according to his brevet rank, and at no other time.

4. To any officer who shall be obliged to incur any extra expense in travelling *to and from*, and sitting on, a general court-martial, a reasonable compensation for such extra expense, actually incurred, not exceeding one dollar and twenty-five cents a day, to an officer not entitled to forage, and one dollar a day to an officer entitled to forage.

5. To the person acting as judge advocate at a general court-martial, one dollar and twenty-five cents a day, in addition to his other pay, for every day he shall be necessarily employed in the duties of the court.

6. To a non-commissioned officer employed as clerk to a paymaster, double pay whilst so employed, and the actual expense of transportation while travelling under orders in the discharge of his duty.

7. To every enlisted soldier employed at work on fortifications, in surveys, in cutting roads, or other constant labor, if not less than ten days, fifteen cents a day, in addition to his other pay, and an extra gill of whiskey or spirits for each day while so employed.

8. To each matron or nurse necessarily employed in a hospital, and to each of the women allowed to any body of troops, not exceeding the proportion of four to a company, one ration a day.

ARTICLE 75. A subaltern officer on any staff duty, (except that of aide-de-camp to a major general,) for which he receives an extra compensation, shall be allowed three rations a day whilst in the performance of such duty, instead of the number to which he may be otherwise entitled.

ARTICLE 76. Every officer who shall not have drawn his rations in kind shall be allowed twenty cents for each ration to which he may be entitled.

ARTICLE 77. Every officer who shall not have drawn his forage in kind shall be allowed eight dollars a month for each horse for which he may be entitled to forage: *Provided*, That neither forage nor money shall be drawn for any horse not actually kept in service.

ARTICLE 78. Every officer shall be entitled, for each private servant allowed to him and actually kept in service, to the pay, rations, and clothing of a private soldier, or money in lieu thereof, on a certificate in the pay account setting forth the name and description of the servant: *Provided*, That none but company officers shall be allowed to take soldiers of the army as servants or waiters.

ARTICLE 79. Every officer whose duty shall require him to be on horseback in time of action, and whose horse shall have been killed in battle, shall be allowed a sum not exceeding two hundred dollars as a compensation for the loss of each horse so killed; the value of such horse to be proved by the affidavit of the quartermaster of the body of troops to which the owner may belong, or of two other credible witnesses.

ARTICLE 80. Every officer or soldier who shall have been discharged from the service, except by way of punishment for any offence, shall be allowed his pay and rations, or an equivalent in money, for such time as shall be sufficient for him to travel from the place of his discharge to the place of his residence, computed at the rate of twenty miles a day.

ARTICLE 81. Each enlisted workman, artificer, and laborer of the ordnance department shall be allowed the same clothing and other allowances as a private of infantry, except clothing to master workmen.

SECTION 16.—Of recruiting.

ARTICLE 82. A recruit for the military service shall be an effective, able-bodied citizen of the United States, not less than five feet six inches high, and not less than eighteen nor more than thirty-five years of age, and he shall be engaged to serve for five years, unless sooner discharged.

ARTICLE 83. The above regulations relative to the height and age of a recruit shall not extend to musicians, or to those soldiers who may re-enlist into the service.

ARTICLE 84. There shall be paid to each duly enlisted recruit a bounty of twelve dollars, the payment of one-half of which shall be deferred until he shall have been mustered, and shall have joined a body of troops in which he is to serve.

ARTICLE 85. There shall be paid to each commissioned officer employed in the recruiting service the sum of two dollars for each recruit duly enlisted by him, and mustered.

ARTICLE 86. *The preceding regulations shall not extend to enlistments for service in the corps of mounted rangers, or in the ordnance department.*

ARTICLE 87. Enlisted men of the corps of mounted rangers shall be engaged to serve for one year, unless sooner discharged.

ARTICLE 88. Enlisted men of the ordnance department shall be engaged to serve for five years, unless sooner discharged.

ARTICLE 89. All enlistments in the military service of the United States shall be voluntary.

ARTICLE 90. No person under the age of twenty-one years shall be enlisted or held in the service of the United States without the previous consent of his parent or guardian, if he have any.

ARTICLE 91. Any officer who shall enlist any person contrary to law shall forfeit, for every such offence, a sum equal to the value of the bounty and clothing which the person so enlisted may have received from the United States; which sum shall be deducted from the pay and emoluments of such officer.

SECTION 17.—*Of pensions.*

ARTICLE 92. If any officer or other person on the military peace establishment shall be disabled, by wounds or otherwise, while in the line of his duty in public service, he shall be placed on the list of invalid pensioners of the United States, at such rate of pay and under such regulations as may be directed by the President of the United States for the time being.

ARTICLE 93. To all persons on the military pension roll of the United States, of the grades hereinafter mentioned, there shall be allowed, for the highest rate of disability, the following monthly pensions, to wit: to a first lieutenant, seventeen dollars; to a second lieutenant, fifteen dollars; to a cadet, ——— dollars; to a non-commissioned officer, musician, or private, or other enlisted soldier, eight dollars; and for disabilities of a degree less than the highest, a sum proportionably less: *Provided*, That nothing herein contained shall be construed to lessen the pension of any person entitled, by special provision, to a higher pension than is herein provided.

ARTICLE 94. The monthly pension to be allowed for such wounds or disabilities, to a commissioned officer of any other than the above-mentioned rates, shall not exceed, for the highest rate of disability, half the monthly pay of such officer at the time of his being wounded or disabled; and no officers shall receive more than the halfpay of a lieutenant colonel.

ARTICLE 95. If any commissioned officer on the military peace establishment shall, while in the service of the United State, die, by reason of any wound received in actual service, and shall leave a widow, or, if no widow, a child or children, under sixteen years of age, such widow, or, if no widow, such child or children, shall receive, for the term of five years, half the monthly pay to which the deceased was entitled at the time of his death. In case of the death or intermarriage of such widow, before the expiration of the said term of five years, the half-pay for the remainder of the term shall go to the child or children, if any, of such deceased officer; and shall cease in the case of the death of such child or children before the expiration of said term.

ARTICLE 96. The right of any person to receive a pension in virtue of any of the foregoing provisions shall be construed to commence at the time of completing the testimony required to substantiate the claim of such person.

SECTION 18.—*Miscellaneous provisions.*

ARTICLE 97. The President of the United States may, by and with the advice and consent of the Senate, confer brevet rank on those officers of the army who shall have distinguished themselves by gallant actions or meritorious conduct, or who shall have served ten years in any one grade.

ARTICLE 98. The President of the United States may appoint those officers of the staff who are to be taken from the line of the army; and the appointment of such officers in the staff shall not prejudice their rank and promotion in the line.

ARTICLE 99. In the ordinary arrangement of the troops a division shall consist of two brigades, and shall be commanded by a major general; a brigade shall consist of two regiments, and shall be commanded by a brigadier general; but this arrangement may be varied at the discretion of the general commanding an army; and this article shall not be construed to require the appointment of a greater number of general officers than are, or may be, authorized by law.

ARTICLE 100. The President of the United States shall be authorized to prescribe the uniform of the army, and the manner in which the troops shall be armed and equipped; and also the composition of the ration, and the quantity and kind of clothing, camp equipage, medicines, and hospital stores, and other supplies which shall be issued for their use.

ARTICLE 101. The non-commissioned officers and privates of the corps of mounted rangers shall arm and equip themselves, unless otherwise ordered by the President of the United States; and they shall provide their own horses.

ARTICLE 102. The Secretary of War shall prepare general regulations for the army, not inconsistent with the provisions of law, better defining and prescribing the duties and powers of the officers and other persons on the military establishment; which regulations, when approved by the President of the United States, shall be respected and obeyed until they shall have been altered or revoked by the same authority.

ARTICLE 103. The Secretary of War may in each year make, or cause to be made, purchases and contracts for the purpose of procuring the clothing, camp equipage, medicines, and hospital stores requisite for the use of the troops during the succeeding year.

ARTICLE 104. Supplies of subsistence stores for the troops, unless, in particular and urgent cases, the Secretary of War should otherwise direct, shall be purchased by contract to be made by the commissary general, on public notice, under such regulations as the Secretary of War may prescribe, and such supplies shall be delivered, on inspection, in the bulk at such places as shall be specified in the contract.

ARTICLE 105. No officer of any department of the military establishment shall be concerned, except on account of the United States, in the purchase or sale of any article intended for the military service in the department to which he may belong, nor shall he accept any emolument other than what is or may be allowed by law for transacting any business in such department.

ARTICLE 106. All officers of the military establishment shall, when required thereto by order of the President of the United States, perform the duties of their respective offices with regard to the militia or volunteer forces who may be at any time in the service of the United States, as well as with regard to the regular forces.

ARTICLE 107. It shall be the duty of the proper officers of the staff of the army, on the requisition of the commanding officer of any detachment of seamen or marines of the navy of the United States which may be acting, or proceeding to act, on shore in conjunction with the land troops, to provide the officers, seamen, and marines of such detachment with rations and camp equipage, and the means of transportation for themselves and their baggage, provisions, artillery, and military stores, according to the relative rank and station of each, and to the military regulations in such cases, and also to furnish the commanding naval officer of any such detachment and his necessary aids with horses, accoutrements, and forage during the time they may be employed in co-operating with the land troops: *Provided*, That the cost of the rations which may be furnished shall be reimbursed at the contract price out of the appropriations for the support of the navy.

ARTICLE 108. Every officer of the quartermaster's, subsistence, purchasing, and pay departments, previously to entering on the execution of his office, shall take an oath *faithfully to perform the duties thereof*, and shall give a good and sufficient bond to the United States, to be approved by the Secretary of War, in such sum as the President of the United States shall direct, with condition fully to account for all money and public property which he may receive for the military service.

ARTICLE 109. The Secretary of War may allow to the quartermaster general and to the commissary general of purchases such sums as shall have been actually and, in his opinion, necessarily expended in their respective departments for office rent, fuel, candles, and extra clerk hire.

ARTICLE 110. The Secretary of War may make reasonable allowances for the store rent, storage, and salaries of storekeepers necessary for the safe-keeping of military stores and supplies.

ARTICLE 111. Every captain or commander of a company, detachment, or recruiting station, or other officer, who shall have received clothing or camp equipage for the use of his command or to be issued to the troops, shall render to the quartermaster general quarterly returns of such supplies, according to the forms which may be prescribed, accompanied by the requisite vouchers for any issues that shall have been made, which returns and vouchers shall, after due examination by the quartermaster general, be transmitted for settlement to the proper officer of the Treasury Department.

ARTICLE 112. It shall be the duty of all officers charged with issuing to the troops clothing or other supplies carefully to preserve the same, and any loss or damage of any article of supplies which shall appear on final settlement shall be made good by stoppages from the monthly pay of the officer accountable for such article, unless it shall be satisfactorily shown to the Secretary of War, by one or more depositions setting forth the circumstances of the case, that such loss or damage was occasioned by unavoidable accident, or occurred in actual service, without any fault on the part of such officer.

ARTICLE 113. Every officer commanding a regiment, corps, garrison, or detachment, shall make to the chief of the Ordnance department, once in every two months, or oftener if so directed, a written report stating the damages done to arms or equipments in the use of the troops under his command, and specifying the officer or soldier by whose abuse or negligence any of such damages may have been occasioned, and the cost of repairing any damages occasioned by such abuse or negligence shall be deducted from the pay of such officer or soldier.

ARTICLE 114. Whenever more than the authorized quantity of clothing shall have been issued to a soldier the value of the extra articles shall be deducted from his pay, and he shall receive pay according to the estimated value for such articles of clothing as shall not have been issued to him in each year; and, in like manner, any soldier discharged from the service shall receive pay for any articles of clothing that may be due to him.

ARTICLE 115. Every non-commissioned officer or soldier of the regular forces, and every officer or soldier of any militia or volunteer forces in the service of the United States who may be captured by the enemy, shall be entitled to receive during his captivity, although his term of service may have expired, the same pay, subsistence, and other allowances to which he may have been entitled whilst in actual service: *Provided*, That no prisoner of war of the militia shall be entitled, after the date of his parole, to receive such pay and allowances other than the travelling expenses allowed by law.

ARTICLE 116. No non-commissioned officer or soldier in the service of the United States shall be subject to personal arrest for any debt under the sum of twenty dollars contracted before enlistment, nor for any debt contracted after enlistment.

ARTICLE 117. Whenever any non-commissioned officer or soldier shall have been arrested, whether by mesne process or in execution, contrary to the intent of the preceding article, it shall be the duty of any judge of a district court of the United States, or of any court or judge of a State, duly authorized by the laws of such State, to grant, on application by an officer, a writ of *habeas corpus*, returnable before himself; and upon due hearing and examination in a summary manner, to discharge the non-commissioned officer or soldier from such arrest, taking common bail, if required, in any case upon mesne process, and to commit him to the applicant or some other officer.

ARTICLE 118. All persons in the military service of the United States, and all artificers, workmen, and laborers, (though not enlisted men,) employed on the fortifications, in the armories, or arsenals of the United States, shall be exempted, during their term of service, from duty in the militia, and from service as jurors in any court.

ARTICLE 119. Any person who shall procure or entice any soldier in the service of the United States to desert, or who shall purchase from any soldier his arms, uniform clothing, or any part thereof; and any captain or commanding officer of any ship or vessel who shall knowingly enter a deserter on board of such ship or vessel as one of his crew, or otherwise carry him away, or refuse to deliver him up to the orders of his commanding officer, shall, upon legal conviction, be fined, at the discretion of any court having cognizance of the offence, in any sum not exceeding three hundred dollars, or be confined for any term not exceeding one year.

ARTICLE 120. It shall be lawful for the President of the United States to cause fortifications to be erected and preserved, under his direction, in such places as the public safety may, in his opinion, require them; and to cause them to be provided with such armament, and to be garrisoned by such troops in the service of the United States, as he may judge necessary.

ARTICLE 121. It shall also be lawful for him to receive, in behalf of the United States, a cession of the land occupied from any State, or intended to be occupied by the fortifications, armories, or arsenals, of

the United States, or the necessary buildings; and where such cession has not been or shall not be made, to purchase such lands on behalf of the United States; provided, that no such purchase shall be made where such lands may be the property of a State.

ARTICLE 122. The President of the United States shall, whenever he may deem it advantageous to the public service, cause to be sold, under such regulations as shall be prescribed by the Secretary of War, any ordnance, ordnance stores, or subsistence or medical supplies, which, upon proper inspection and survey by one inspector general, or such other officer or officers as the Secretary of War may appoint for that purpose, shall appear to be damaged, or otherwise unfit for service.

CHAPTER II.

Rules and articles of war for the government of the armies of the United States.

SECTION 1.—*Of divine worship.*

ARTICLE 1. It is earnestly recommended to all officers and soldiers diligently to attend divine service; and any officer who shall behave himself indecently or irreverently at any place of divine worship shall be brought before a general court-martial, there to be publicly and severely reprimanded by the president. Any non-commissioned officer or soldier convicted before a court-martial of having so offended shall, for his first offence, forfeit one-sixth of a dollar, to be deducted out of his next pay; and for the second, and every subsequent like offence, he shall forfeit a like sum, and be confined twenty-four hours. The money so forfeited shall be applied, by the commanding officer of the troop or company to which the offender may belong, to the use of the sick soldiers of such troop or company.

ARTICLE 2. Any commissioned officer who shall use any profane oath or execration shall forfeit and pay for each and every such offence one dollar, to be applied as in the preceding article; and any non-commissioned officer or soldier so offending shall incur the penalties expressed in the preceding article.

ARTICLE 3. Any commissioned chaplain who shall be convicted, before a general court-martial, of having absented himself from his duty, (except in case of sickness or leave of absence,) shall be fined not exceeding one month's pay, besides the loss of his pay during such absence from duty; or shall be discharged from the service, as the said court-martial shall judge proper.

SECTION 2.—*Of crimes and punishments.*

ARTICLE 4. Any officer or soldier who shall begin, excite, cause, or join in any mutiny or sedition in any troop, company, garrison, detachment, party, or guard, in the service of the United States, shall, on conviction thereof, suffer death, or such other punishment as shall be awarded by a general court-martial.

ARTICLE 5. Any officer or soldier who, being present at any military sedition, shall not use his utmost endeavor to suppress the same, or who, coming to the knowledge of any mutiny, or intended mutiny, shall not, without delay, give information thereof to his commanding officer, shall, on conviction thereof, suffer death, or such other punishment as shall be awarded by a general court-martial.

ARTICLE 6. Any officer or soldier who shall desert from the service of the United States shall, on conviction thereof, suffer death, or such other punishment as shall be awarded by a general court-martial.

ARTICLE 7. Any officer or soldier who shall advise or persuade any other officer or soldier to desert from the service of the United States, or any non-commissioned officer or soldier who, without a regular discharge from the regiment, troop, or company in which he last served, shall enlist in any other regiment, troop, or company, shall be reputed a deserter, and shall suffer accordingly.

ARTICLE 8. Any officer or soldier who shall hold correspondence with, or give intelligence to, the enemy, directly or indirectly, or who shall relieve the enemy with victuals or ammunition, or shall knowingly harbor or protect an enemy, shall, on conviction thereof, suffer death, or such other punishment as shall be awarded by a general court-martial.

ARTICLE 9. Any officer or soldier who shall misbehave himself before the enemy, run away, or shamefully abandon or deliver up any fort, post, garrison, or guard, committed to his charge, or which it was his duty to defend, or speak words inducing others to do the like, or who shall compel the commander of any fort, post, garrison, or guard, to deliver it up to the enemy, or to abandon it, shall, on conviction thereof, suffer death, or such other punishment as shall be awarded by a general court-martial.

ARTICLE 10. Any officer or soldier who shall quit his post or colors to plunder and pillage, or who shall cast away his arms or ammunition, shall, on conviction thereof, suffer death, or such other punishment as shall be awarded by a general court-martial.

ARTICLE 11. Any officer or soldier who shall strike a superior officer, or draw or lift up any weapon, or offer any violence against him, being in the execution of his office, or who shall disobey any lawful command of a superior officer, shall, on conviction thereof, suffer death, or such other punishment as shall be awarded by a general court-martial.

ARTICLE 12. Any officer or soldier who, being employed in foreign parts, shall force a safe-guard, or who shall do violence to any person bringing provisions or other necessaries to the camp, garrison, or quarter of the troops of the United States employed in foreign parts, shall, on conviction thereof, suffer death, or such other punishment as shall be awarded by a general court-martial.

ARTICLE 13. Any officer or soldier who shall treacherously make known the watchword to any person not entitled, according to the rules and discipline of war, to receive it, or who shall, without good and sufficient cause, give a parole or watchword different from that which he received, shall, on conviction thereof, suffer death, or such other punishment as shall be awarded by a general court-martial.

ARTICLE 14. Any officer or soldier who, by discharging fire-arms, drawing swords, beating drums, or by any other means whatsoever, shall occasion false alarms in camp, garrison, or quarters, shall suffer death, or such other punishment as shall be awarded by a general court-martial.

ARTICLE 15. Any sentinel who shall be found sleeping on his post, or shall leave it before he shall have been regularly relieved, shall, on conviction thereof, suffer death, or such other punishment as shall be awarded by a general court-martial.

ARTICLE 16. Any officer who shall, knowingly receive and entertain a deserter, and shall not, on discovering him to be a deserter, immediately confine him and give notice thereof to the commanding officer

of the regiment, troop, or company in which he last served, shall, on conviction thereof before a general court-martial, be cashiered.

ARTICLE 17. Any officer who, being in arrest, shall leave his confinement before he shall have been set at liberty by proper authority, shall, on conviction thereof before a general court-martial, be cashiered.

ARTICLE 18. Any commissioned officer convicted before a general court-martial of conduct unbecoming the character of an officer and a gentleman, shall be cashiered.

ARTICLE 19. Any officer who, being in command of any garrison, fort, or barracks of the United States, shall exact an exorbitant price for any house, or shall let to a settler, or connive at the like exaction in others, or shall, by his own authority, and for his private advantage, lay any duty upon, or be interested in the sale of any victuals, liquors, or other necessaries of life, brought into the garrison, fort, or barracks for the use of the soldiers, shall, on conviction thereof before a general court-martial, be cashiered.

ARTICLE 20. Any officer who shall wilfully neglect or refuse, upon application duly made, to deliver over to the civil magistrates, or to assist in the apprehension of any officer or soldier under his command accused of a crime punishable by the known laws of the land, shall, on conviction thereof before a general court-martial, be cashiered.

ARTICLE 21. Any officer who shall knowingly make a false muster of man or horse, or who shall intentionally sign, or direct, or allow the signing of muster-rolls wherein such false muster shall be contained, or who shall knowingly muster, as a soldier, a person not a soldier, shall, upon proof thereof by two witnesses, before a general court-martial, be cashiered, and shall be thereby utterly disabled to have or hold any office or employment in the service of the United States.

ARTICLE 22. Any officer who shall take money or other thing by way of gratification, or mustering any portion of the troops, or on signing muster-rolls, shall, on conviction thereof before a general court-martial, be cashiered, and shall be thereby utterly disabled to have or hold any office or employment in the service of the United States.

ARTICLE 23. Any officer who shall knowingly sign a false certificate relating to the absence of any officer or soldier from muster or duty, or relating to his or their pay, shall, on conviction thereof before a general court-martial, be cashiered.

ARTICLE 24. Any officer who shall knowingly make a false return to the Department of War, or to any of his superior officers authorized to call for such return, of the state of the regiment, troop, company, or garrison, under his command, or of the arms, ammunition, clothing, or other stores, for which he may be accountable, shall, on conviction thereof before a general court-martial, be cashiered.

ARTICLE 25. Any officer who shall be convicted before a general court-martial of having sold without proper authority, or of having embezzled, misapplied, or wilfully or negligently suffered to be spoiled or damaged any provisions, forage, arms, clothing, ammunition, or other military stores belonging to the United States, shall, at his own expense, make good the loss or damage, and shall moreover forfeit all his pay, and be cashiered.

ARTICLE 26. Any commissioned officer who shall embezzle or misapply any money with which he may have been intrusted for any military purpose, shall, on conviction thereof before a general court-martial, be cashiered, and compelled to refund the money; any non-commissioned officer so offending shall, on conviction thereof, be reduced to the ranks, and put under stoppages until the money be refunded, and shall suffer such other punishment, according to the nature and degree of his offence, as a court-martial shall award.

ARTICLE 27. Any officer who shall be found drunk on his guard, party, or other duty, shall, on conviction thereof before a general court-martial, be cashiered; any non-commissioned officer or soldier so offending shall, on conviction thereof, suffer such punishment as shall be awarded by a court-martial.

ARTICLE 28. Any officer or soldier who shall send a challenge to any other officer or soldier to fight a duel, or shall accept such a challenge, if sent, shall, if a commissioned officer, on conviction thereof before a general court-martial, be cashiered; if a non-commissioned officer or soldier, he shall suffer such punishment as shall be awarded by a court-martial.

ARTICLE 29. Any officer or soldier who shall upbraid another for refusing a challenge, or who, being in command of a guard, shall, knowingly or willingly, suffer any person to go forth to fight a duel, or who shall second, promote, or carry a challenge, shall be punished as a challenger.

ARTICLE 30. Any officer who shall use contemptuous or disrespectful words against the President, the Vice-President, or the Congress of the United States, or against the chief magistrate or legislature of any State in which he may be quartered, shall, on conviction thereof, be cashiered, or otherwise punished as a general court-martial shall direct; and any non-commissioned officer or soldier convicted of having so offended shall suffer such punishment as shall be awarded by a court-martial.

ARTICLE 31. Any officer or soldier who shall behave himself with contempt or disrespect towards his commanding officer shall, on conviction thereof, suffer such punishment, according to the nature and degree of his offence, as shall be awarded by a court-martial.

ARTICLE 32. Any officer who shall intentionally or negligently omit to send any return or report lawfully required by the Secretary of War, or by any officer authorized to call for such return or report, shall, on conviction thereof, suffer such punishment, according to the nature and degree of his offence, as shall be awarded by a general court-martial.

ARTICLE 33. If any commanding officer upon complaint made to him of an officer or soldier beating or otherwise ill treating any person, of disturbing fairs or markets, or of committing any kind of riot, to the disquieting of the citizens of the United States, shall, after proof of the justice of the complaint, refuse or neglect to see justice done to the offender, and reparation made to the injured party, to the extent of part of the offender's pay, he shall, on conviction thereof before a general court-martial, be cashiered, or suffer such other punishment as the court-martial may award.

ARTICLE 34. Any provost marshal, or any officer in command of a guard, who shall refuse to receive, or who shall, without proper authority, release any prisoner duly committed to his charge, or shall suffer him to escape, shall, on conviction thereof, be punished according to the nature and degree of his offence, at the discretion of a court-martial.

ARTICLE 35. Any provost marshal, or any officer in command of a guard, who shall not, within twenty-four hours after the commitment of any prisoner to his charge, or as soon as he shall have been relieved from his guard make report in writing to the commanding officer of such prisoner's name and crime, and of the name of the officer who committed him, shall, on conviction thereof, suffer such punishment, according to the nature and degree of his offence, as shall be awarded by a court-martial.

ARTICLE 36. Any officer or soldier who, being concerned in an affray, shall refuse to obey any officer, of what condition soever (though of inferior rank) who shall order him into arrest or confinement, or shall

draw his sword upon such officer, shall, on conviction thereof, suffer such punishment, according to the nature and degree of his offence, as shall be awarded by a general court-martial.

ARTICLE 37. Any officer or soldier who, not being prevented by sickness, or some other evident necessity, from repairing, at the time fixed, to the place of parade, of exercise, or of other rendezvous appointed by his commanding officer, shall fail to appear at such rendezvous, or who shall, without leave from his commanding officer, go from such place of rendezvous before he shall have been regularly dismissed or relieved, or who shall, without urgent necessity, or without leave from his superior officer, quit his guard, platoon, or division, shall, on conviction thereof, suffer such punishment, according to the nature and degree of his offence, as shall be awarded by a court-martial.

ARTICLE 38. Any officer or soldier who shall lie out of his quarters, garrison, or camp, without leave from his superior officer, shall, on conviction thereof, suffer such punishment, according to the nature and degree of his offence, as shall be awarded by a court-martial.

ARTICLE 39. Any officer or soldier who shall commit any waste or damage in any *cultivated grounds*, or shall maliciously destroy any property whatsoever belonging to an inhabitant of the United States, unless by order of the *commander* of an army, shall, on conviction thereof, (besides such other penalty as he may be liable to by law,) suffer such punishment, according to the nature and degree of his offence, as shall be awarded by a court-martial.

ARTICLE 40. Any non-commissioned officer or soldier who shall be found more than one mile from the camp without leave in writing from his commanding officer, or who shall, without leave from his commanding officer, absent himself from his troop, company, or detachment, shall, on conviction thereof, suffer such punishment, according to the nature and degree of his offence, as shall be awarded by a court-martial.

ARTICLE 41. Any non-commissioned officer or soldier who shall not retire to his quarters or tent at the *appointed signal for retiring* shall, on conviction thereof, suffer such punishment, according to the nature and degree of his offence, as shall be awarded by a court-martial.

ARTICLE 42. Any non-commissioned officer or soldier who shall sell, or designedly or negligently waste the ammunition delivered to him to be employed in the service of the United States, or who shall sell or negligently lose or spoil his horse, arms, clothes, or accoutrements, shall, on conviction thereof before a court-martial, undergo such monthly stoppages (not exceeding the half of his pay) as such court-martial shall deem sufficient for repairing the loss or damage, and shall suffer confinement, or such other punishment, according to the nature and degree of his offence, as shall be awarded by the said court-martial.

ARTICLE 43. Any soldier who shall hire another to do his duty for him, and also the party so hired to do another's duty, shall, on conviction thereof, suffer such punishment, according to the nature and degree of his offence, as shall be awarded by a court-martial.

ARTICLE 44. Any commissioned officer who shall connive at a soldier's hiring another to do his duty for him shall, on conviction thereof, suffer such punishment, according to the nature and degree of his offence, as shall be awarded by a general court-martial; and any non-commissioned officer so offending shall, on conviction thereof before a court-martial, be reduced to the ranks.

ARTICLE 45. Any officer or soldier who shall be guilty of a crime not capital, or of any disorder or neglect prejudicial to good order and military discipline, though not specified in the rules and articles of war, shall, on conviction thereof, suffer such punishment, according to the nature and degree of his offence, as shall be awarded by a court-martial.

ARTICLE 46. No officer or soldier shall suffer the punishment of death for desertion in time of peace, or for any offence except those expressly declared in the rules and articles of war to be so punishable.

ARTICLE 47. No officer or soldier in the service of the United States shall suffer corporal punishment by stripes or lashes.

ARTICLE 48. Any non-commissioned officer or soldier who shall desert from the service of the United States shall, in addition to any other penalties prescribed by the rules and articles of war, be liable to serve for and during such a period as shall, with the time he may have served previously to his desertion, amount to the full term of his enlistment; and such non-commissioned officer or soldier shall and may be tried by a court-martial and punished, although the term of his enlistment may have elapsed previous to his apprehension or trial.

SECTION 3.—Of courts-martial and courts of inquiry.

ARTICLE 49. *The President of the United States*, any general officer commanding an army, or any general officer or colonel commanding a separate *geographical* department, may appoint general courts-martial whenever necessary.

ARTICLE 50. Whenever any general officer commanding an army, or a general officer or colonel commanding a separate department, shall be the accuser or prosecutor of any officer under his command, the general court-martial for the trial of such officer shall be appointed by the President of the United States.

ARTICLE 51. *The commander of the corps of engineers may appoint, from the officers under his command, general courts-martial for the trial of cadets, or enlisted soldiers attached to the Military Academy.*

ARTICLE 52. A general court-martial may consist of any number of commissioned officers, from five to thirteen inclusively; but it shall not consist of less than thirteen, when that number can be convened without manifest injury to the service.

ARTICLE 53. *The officer ordering a general court-martial may appoint some fit person to act as judge advocate, and in case he shall not have made such appointment, or in case the person so appointed shall not attend previous to the convening of the court, the president of the court may appoint a judge advocate.*

ARTICLE 54. Any officer *not under the rank of captain* commanding any regiment, corps, garrison, or detachment, may appoint, for the troops under his command, courts-martial, to consist of three commissioned officers.

ARTICLE 55. Whenever it may be found convenient and necessary for the public service, the officers of the corps of marines shall be associated with the officers of the land forces for the purpose of holding courts-martial and trying offenders belonging to either; and, in such cases, the order of the senior officer, whether of the land or marine forces, who may be present, and duly authorized, shall be received and obeyed.

ARTICLE 56. At a general court-martial, the judge advocate shall administer to each member of the court, before they proceed upon trial, the following oath:

"You (A B) do swear that you will well and truly try and determine, according to evidence, the matter now before you, between the United States of America and the prisoner to be tried; and that you will

duly administer justice according to the rules and articles of war for the government of the armies of the United States, without partiality, fear, or affection; and if any doubt shall arise, not explained by said articles, according to your conscience, the best of your understanding, and the custom of war in like cases; and you do further swear that you will not divulge the sentence of the court until it shall have been published by the proper authority; neither will you disclose or discover the vote or opinion of any particular member of the court-martial, unless required to give evidence thereof, as a witness, by a court of justice, in a due course of law—so help you God." The same oath shall be administered in like manner by the president of any other than a general court-martial to the other members, and afterwards, by any sworn member, to the president; and after the said oath shall have been administered to the respective members of a general court-martial, the president of the court shall administer to the judge advocate the following oath:

"You (A B) do swear, that you will not disclose or discover the vote or opinion of any particular member of the court-martial, unless required to give evidence thereof, as a witness, by a court of justice, in due course of law; nor divulge the sentence of the court to any but the proper authority, until it shall have been duly disclosed by the same—so help you God."

ARTICLE 57. At a court-martial, the judge advocate or some other person deputed by the officer appointing the court, shall prosecute in the name of the United States, but shall so far consider himself as counsel for the prisoner, after the said prisoner shall have made his plea, as to object to any leading question to a witness, or any question to the prisoner, the answer to which might tend to criminate the said prisoner.

ARTICLE 58. When a prisoner arraigned before a court-martial shall stand mute, or answer foreign to the purpose, the court shall proceed to trial and judgment, as if the prisoner had pleaded not guilty.

ARTICLE 59. When a prisoner shall challenge any member of a court-martial, he must state his cause of challenge, of which the court shall, after due deliberation, determine the relevancy or validity, and decide accordingly; and no challenge to more than one member at a time shall be received by the court.

ARTICLE 60. All persons who give evidence before a court-martial are to be examined, upon oath or affirmation, in the following form:

"You swear or affirm, (as the case may be,) that the evidence you shall give in the cause now in hearing shall be the truth, the whole truth, and nothing but the truth—so help you God."

ARTICLE 61. On any trial before a court-martial, of a case not capital, the deposition of any witness, not in the military service, taken before a justice of the peace, may be read in evidence: provided, that the prosecutor and the person accused shall have been present at the taking of the same, or shall have been duly notified thereof.

ARTICLE 62. Proceedings or trials before a court-martial shall be carried on only between the hours of eight in the morning and three in the afternoon; except in cases which, in the opinion of the officer appointing the court-martial, may require immediate example.

ARTICLE 63. All the members of a court-martial are to behave with decency and calmness; and, in giving their votes, are to begin with the youngest in commission.

ARTICLE 64. No person whatsoever shall use any menacing words, signs, or gestures, in presence of a court-martial, or shall cause any disorder or riot, or disturb their proceedings, on the penalty of being punished at the discretion of the court.

ARTICLE 65. No commissioned officer shall be tried except by a general court-martial, no member of which shall, if it can be avoided, be of a rank inferior to that of the officer to be tried.

ARTICLE 66. No sentence of death shall be awarded but by the concurrence of two-thirds of the members of a general court-martial.

ARTICLE 67. No regimental garrison, or detachment, court-martial shall have power to try capital cases; neither shall they inflict a fine exceeding one month's pay, nor imprison, nor put to hard labor any non-commissioned officer or soldier for a longer time than one month.

ARTICLE 68. In a case where a court-martial may think proper to sentence a commissioned officer to be suspended from command, they shall have power also to suspend his pay and emoluments for the same time, according to the nature and degree of his offence.

ARTICLE 69. In a case where a commissioned officer shall be cashiered for cowardice or fraud, it shall be added in the sentence that the crime, and place of abode, and of punishment of the delinquent, shall be published in the newspapers in and about the camp, and in those of the State or Territory from which the offender shall have come, or in which he shall have usually resided; after which it shall be deemed scandalous for any officer to associate with him.

ARTICLE 70. No person shall be liable to be tried by a court-martial for any offence which shall appear to have been committed more than two years before the issuing the order for such trial, unless the person, by reason of having absented himself, or some other manifest impediment, shall not have been amenable to justice within that period; nor shall any person be tried a second time for the same offence.

ARTICLE 71. No sentence of a court-martial shall be carried into execution until after the whole proceedings shall have been laid before the officer ordering the same, or the officer commanding the troops for the time being; nor shall any sentence of a court-martial, in time of peace, which shall extend to the loss of life, or to the dismissal of a commissioned officer or cadet, which shall, in time either of peace or war, respect a general officer, be carried into execution, until after the whole proceedings shall have been transmitted to the Secretary of War, to be laid before the President of the United States for his confirmation or disapproval, and orders in the case. All other sentences may be confirmed and executed by the officer ordering the court, or the commanding officer for the time being, as the case may be.

ARTICLE 72. Any officer authorized to order a court-martial shall have power to pardon or mitigate any punishment awarded by such court, except a sentence extending to the loss of life, or to the dismissal of an officer; which sentence, in a case where he may be authorized (by the preceding article) to carry it into execution, he may suspend, until the pleasure of the President of the United States can be known; which suspension, together with a copy of the record of the proceedings of the court-martial, the said officer shall immediately transmit to the President for his determination.

ARTICLE 73. The party tried by any general court-martial shall, upon demand made by himself, or any person in his behalf, be entitled to a copy of the record of the proceedings and sentence of such court-martial; and to this end, such record, transmitted by the judge advocate to the officer ordering the court, or to the officer commanding for the time being, shall be forwarded by the latter, with as much expedition as practicable, to the Secretary of War, and shall be carefully preserved in his office.

ARTICLE 74. Any officer authorized to appoint a general court-martial may appoint a court of inquiry to

examine into the nature of any transaction, or into any accusation or imputation against any officer or soldier; but as courts of inquiry may be perverted to dishonorable purposes, and may be considered as engines of destruction to military merit in the hands of weak and envious commanders, no such court shall be convened unless *specially ordered* by the President of the United States, or demanded by the accused officer or soldier.

ARTICLE 75. A court of inquiry shall consist of one or more commissioned officers, not exceeding three, and a suitable person as a recorder, to reduce the proceedings and evidence to writing. This court shall have the same power as a court-martial to summon witnesses, and to examine them on oath. The party accused shall also be permitted to cross-examine and interrogate the witnesses, so as to investigate fully the circumstances in the question; but a court of inquiry shall not give an opinion on the merits of the case, unless specially required to do so.

ARTICLE 76. The recorder of a court of inquiry shall administer to the members the following oath: "You shall well and truly examine and inquire, according to your evidence, into the matter now before you, without partiality, favor, affection, prejudice, or hope of reward. So help you God."

After which the president shall administer to the recorder, the following oath:

"You, A. B., do swear that you will, according to your best abilities, accurately and impartially record the proceedings of the court, and the evidence to be given in the case in hearing. So help you God."

A witness shall take the same oath as a witness sworn before a court-martial.

ARTICLE 77. The record of the proceedings of a court of inquiry shall be authenticated by the signatures of the recorder and the president, and shall be delivered to the officer ordering the court, or to the officer commanding for the time being; and the said record may be admitted as evidence by a court-martial, in any case not extending to the loss of life, or to the dismissal of an officer: provided, that the circumstances be such that oral testimony cannot be obtained.

SECTION 4.—Of rank and command.

ARTICLE 78. Officers having brevets or commissions of a prior date to those of the regiment in which they serve, may take place in courts-martial and on detachments, when composed of different corps, according to the ranks given them in their brevets, or dates of their former commissions; but in the regiment troop, or company, to which such officers belong, they shall do duty and take rank, both in courts-martial, and on detachments which shall be composed only of their own corps, according to the commissions by which they are mustered in the said corps.

ARTICLE 79. All officers serving by commissions from the authority of any particular State, shall, on all detachments, courts-martial, or other duty, wherein they may be employed in conjunction with the regular forces of the United States, take rank next after all officers of the like grade in said regular forces, notwithstanding the commissions of such militia or State officers may be elder than the commissions of the officers of the regular forces of the United States.

ARTICLE 80. If upon marches, guards, or in quarters, different corps of the army shall happen to join or do duty together, the officer highest in rank of the line of the army, marine corps, or militia, by commission, there on duty or in quarters, shall command the whole, and give orders for what is needful for the service, unless otherwise specially ordered by the President of the United States, according to the nature of the case.

ARTICLE 81. The functions of the engineers being generally confined to the most elevated branch of military science, they are not to assume, nor are they subject to be ordered on, any duty beyond the line of their immediate profession, except by the special order of the President of the United States; but they are to receive every mark of respect to which their rank in the army may entitle them, respectively, and are liable to be transferred, at the discretion of the President, from one corps to another, regard being paid to rank.

SECTION 5.—Miscellaneous obligations and privileges.

ARTICLE 82. Every recruit who shall enlist himself in the service of the United States shall, at the time of his so enlisting, or within six days thereafter, have the rules and articles of war for the government of the armies of the United States read to him, and shall go with the officer who shall have enlisted him, or with the commanding officer of the troop or company into which he shall have been enlisted, before a justice of the peace, or the chief magistrate of any city or town corporate, not being an officer of the army, or, where recourse cannot be had to a civil magistrate, before the judge advocate at a *general court-martial*, and in the presence of such justice, magistrate, or judge advocate, shall take the following oath or affirmation:

"I, A. B, do solemnly swear, or affirm, (as the case may be,) that I will bear true allegiance to the United States of America, and that I will serve them honestly and faithfully against all their enemies and opposers whatsoever; and will observe and obey, according to the rules and articles of war, the orders of the President of the United States, and of the officers appointed over me." And such justice, magistrate, or judge advocate, is to give the officer a certificate signifying that the person enlisted did take the said oath or affirmation. The same oath or affirmation shall also be taken and subscribed by every commissioned officer before he shall enter on the duties of his office.

ARTICLE 83. All officers and soldiers are to behave themselves orderly in quarters and on their march, and every commanding officer shall keep good order, and to the utmost of his power redress any abuse or disorder committed by any officer or soldier under his command.

ARTICLE 84. When any officer or soldier shall be accused of a capital crime, or of having used violence, or committed any offence against the person or property of any citizen of the United States such as is punishable by the known laws of the land, the commanding officer and the officers of the regiment, corps, troops, or company to which the person accused may belong, shall, upon application duly made by or in behalf of the party injured, use their utmost endeavors to deliver over such accused person to the civil magistrate, and shall assist the officers of justice in apprehending and securing such accused person, in order to his being brought to trial.

ARTICLE 85. All officers of what condition soever have power to quell all quarrels, affrays, and disorders, though the persons concerned should belong to another regiment, corps, troop, or company, and either to order officers into arrest or non-commissioned officers or soldiers into confinement until their proper superior officers shall be acquainted therewith.

ARTICLE 86. No officer or soldier shall use any reproachful or provoking speeches to another, upon pain,

if an officer, of being put in arrest; if a non-commissioned officer or soldier, of being confined, and of making the party offended, in the presence of his commanding officer, *such apology or acknowledgment as such commanding officer shall consider satisfactory and sufficient.*

ARTICLE 87. It shall be the duty of every commanding officer who shall know of a challenge to fight a duel having been given or accepted by any officer or soldier under his command, or shall have reason to believe the same to be the case, immediately to arrest and bring to trial such offender.

ARTICLE 88. Any officer or soldier who may refuse to accept a challenge to fight a duel is hereby discharged from any disgrace or opinion of disadvantage which might arise from such refusal, as he will only have acted in obedience to the laws, and have done his duty as a good soldier, who subjects himself to discipline.

ARTICLE 89. Any officer charged with a crime shall be arrested by his commanding officer, and confined to his barracks, quarters, or tent, and deprived of his sword; any non-commissioned officer or soldier so charged shall be confined until tried by a court-martial or released by proper authority; and no officer or soldier shall continue in arrest or confinement *before trial* more than eight days, or until such time as a court-martial can be assembled.

ARTICLE 90. Any officer who may commit a prisoner to the charge of a provost marshal, or of an officer commanding a guard, shall at the same time deliver an account in writing, signed by himself, of the crime with which the said prisoner may be charged.

ARTICLE 91. No commissioned officer or *cadet* shall be discharged from the service, except by order of the President of the United States, or in pursuance of the sentence of a general court-martial.

ARTICLE 92. No non-commissioned officer or soldier, duly enlisted and sworn, shall be dismissed from the service without a discharge in writing, signed by a field officer of the regiment or corps to which he may belong, or by his commanding officer, where no such field officer shall be present; and no non-commissioned officer or soldier shall be discharged before his term of service shall have expired, except by order of the President of the United States, the Secretary of War, *the commanding officer of an army* or of a separate *geographical* department, or in pursuance of the sentence of a general court-martial.

ARTICLE 93. Any colonel or other officer commanding a regiment, corps, troop, or company, and actually quartered with it, may give furloughs to non-commissioned officers or soldiers in such numbers and for so long a time as he shall judge to be consistent with the good of the service; and any captain or other officer commanding a *separate* troop, company, garrison, or detachment, (his field officer being absent,) may give furloughs to non-commissioned officers or soldiers for a time not exceeding twenty days in six months; but not to more than two persons to be absent at the same time, unless some extraordinary occasion should require a departure from this rule.

ARTICLE 94. No non-commissioned officer or soldier shall be excused from duty, except in case of sickness, disability, or leave of absence.

ARTICLE 95. At every muster the commanding officer of each regiment, troop, company, or detachment there present, shall give to the officer mustering such troops a certificate, signed by himself, signifying the length of time during which any officer or soldier who may not appear at such muster may have been absent, and the reason of his absence, a note of which reason and time of absence shall be inserted in the muster-rolls opposite to the name of such officer or soldier. The certificates, together with the muster-rolls, shall, as soon as practicable after the muster, be transmitted by the officer mustering to the Department of War.

ARTICLE 96. The commanding officer of every regiment, corps, garrison, or detachment, shall, in the beginning of every month, transmit through the proper channels to the Department of War an exact return of the state of the troops under his command, specifying the name of every officer who may be then absent from his post, with the reason for, and the time of his absence.

ARTICLE 97. Every captain or other commanding officer of a troop or company shall be charged with the care of the arms, accoutrements, ammunition, clothing, and other military stores belonging to the troop or company under his command, and shall be *accountable* for the same, in case of their being lost, spoiled, or damaged, otherwise than in actual service, or by unavoidable accident.

ARTICLE 98. All public stores, whether of artillery, ammunition, clothing, forage, or provisions, taken from the enemy, shall be secured for the service of the United States, and every commanding officer shall be answerable for any neglect in this respect.

ARTICLE 99. Every commanding officer is required to see that the persons permitted to suttle supply the troops under his command with good and wholesome provisions, and other articles, at a reasonable price, as he shall be answerable for his neglect in this respect.

ARTICLE 100. No suttler shall be permitted to sell any kind of liquors or victuals, or to keep his house or shop open for the entertainment of soldiers after nine o'clock at night, or before the beating of the reveille, or on Sundays during divine service or sermon, on the penalty of being dismissed from all future suttling.

ARTICLE 101. If any officer shall think himself wronged by his colonel or *other commanding officer*, and shall not, upon due application, receive from him the redress to which he may consider himself entitled, he may, in order to obtain justice, complain to the general commanding the troops, or to the commanding officer of the department in which he may be stationed, who is hereby required to examine into the said complaint, and to take proper measures for redressing the wrong complained of, and to transmit, as soon as possible, to the Department of War a true statement of such complaint, with the proceedings had thereon.

ARTICLE 102. If any *non-commissioned officer* or soldier shall think himself wronged by *any officer* of the troop or company to which he may belong, he may complain thereof to the commanding officer of his regiment or corps, who is hereby required to summon a regimental court-martial for doing justice to the complainant, from the decision of which regimental court-martial either party may, if he think himself still aggrieved, appeal to a general court-martial; but if, upon a hearing before such general court-martial, the appeal shall appear vexatious and groundless, the person so appealing shall be punished at the discretion of the said court-martial.

ARTICLE 103. When any commissioned officer or soldier shall die in the service of the United States, the major of the regiment to which the deceased may have belonged, or the officer doing the major's duty in his absence, or, in any post or garrison, the second officer in command shall immediately secure all his effects then in camp or quarters, and shall make an inventory thereof, which he shall forthwith transmit to the office of the Department of War, in order that it may be received by the executors or administrators of the deceased.

ARTICLE 104. When any non-commissioned officer or soldier shall die in the service of the United States, the officer commanding the troop or company to which the deceased may have belonged shall, in the presence of two other commissioned officers, take an account of his personal effects, and transmit it to the office of the Department of War; and the said effects shall be accounted for, and paid, to the representatives of the deceased; and in case any officer, so authorized to take care of such effects, shall, before he shall have so accounted for them, leave the regiment or post, he shall, before being permitted to quit the same, deposit them in the hands of the commanding officer, in order that they may be secured for, and paid to, the said representatives.

SECTION 6.—*Of the application of the Articles of War.*

ARTICLE 105. All commissioned officers, cadets, non-commissioned officers, artificers, musicians, and privates on the military establishment, and all other persons enlisted in the military service of the United States, or persons duly authorized to settle for the troops; all followers and retainers to the camp, and all persons whatsoever serving with the armies of the United States in the field, though not enlisted soldiers, shall be governed by these rules and articles of war.

ARTICLE 106. The officers and soldiers of any militia or volunteer forces in the service of the United States shall, at all times and in all places, when joined or acting in conjunction with the regular forces of the United States, be governed by these rules and articles of war; and shall be subject to be tried by court-martial in like manner with the officers and soldiers in the regular forces, save only that such courts-martial shall be composed entirely of officers of such militia or volunteer forces.

ARTICLE 107. Any person not a citizen of, or not owing allegiance to the United States, who shall, in time of war, be found lurking as a spy in or about the fortifications or encampments of the armies of the United States, or any of them, shall suffer death, according to the law and usage of nations, by sentence of a general court-martial.

ARTICLE 108. Every officer now in the army of the United States shall, within six months after the passage of this act, and every officer who shall hereafter be appointed shall, before he shall enter on the duties of his office, subscribe these rules and articles of war.

ARTICLE 109. The foregoing articles shall be read and published once in every six months to every garrison, regiment, troop, company, or detachment, mustered or to be mustered in the service of the United States.

CHAPTER III.

Of the repeal of former enactments relating to the Military Establishment.

ARTICLE I. *This act shall take effect on the —— day of ——; from and after which day all acts and parts of acts which have been passed relating to the military establishment, and coming within the purview of any of the provisions of this act, shall be held to be repealed: Provided, That nothing herein contained shall be construed to affect any existing contract with the United States, or any debt or demand due to or from the United States; or to extend to any offence committed against any law now in force intended by this act to be repealed, or to any appointment to office made under any such law.*

REMARKS.

The resolution of the House of Representatives, in compliance with which the foregoing act has been prepared, was not regarded by the Secretary of War as authorizing him to propose any important alterations in the provisions of law relative to the military establishment, except such as seemed necessary in order to make those provisions agree with each other where they are found to be inconsistent; at the same time omitting such as have, by custom, become obsolete, and introducing others requisite to produce conformity between the law and the practice under it. In other respects the authority given by the resolution "to revise and amend the acts of Congress relating to the army," has been exercised chiefly in classifying and arranging the matter of the existing laws, and in amending their language.

The arrangement adopted in drawing up the revised act is sufficiently explained by the following

ANALYSIS.

CHAPTER I. Of the military peace establishment.	Section 15. Of pay and emoluments.
Section 1. Of the artillery.	Section 16. Of recruiting.
Section 2. Of the infantry.	Section 17. Of pensions.
Section 3. Of the mounted rangers.	Section 18. Miscellaneous provisions.
Section 4. Of the general officers and their aides-de-camp.	CHAPTER II. Rules and Articles of War for the government of the armies of the United States.
Section 5. Of the Adjutant General's department.	Section 1. Of divine worship.
Section 6. Of the Inspector's department.	Section 2. Of crimes and punishments.
Section 7. Of the Topographical department.	Section 3. Of courts-martial and courts of inquiry.
Section 8. Of the Quartermaster's department.	Section 4. Of rank and command.
Section 9. Of the Subsistence department.	Section 5. Miscellaneous obligations and privileges.
Section 10. Of the Purchasing department.	Section 6. Application of the Articles of War.
Section 11. Of the Pay department.	CHAPTER III. Of the repeal of former enactments.
Section 12. Of the Medical department.	
Section 13. Of the Engineer department.	
Section 14. Of the Ordnance department.	

In order that the changes proposed in the provisions and language of the enactments may be clearly shown by a comparison of the revised act with the existing laws a marginal note is made opposite to each article referring to the corresponding clause of the existing law, and attention is further directed

to the more important alterations by underlining the words containing them. Remarks in relation to some of them are here subjoined.

1. In order to avoid an unnecessary multiplication of terms for denoting the integral parts of the organization the battalion of rangers is styled a *corps*; and the grade of *second lieutenant* substituted for that of *third lieutenant*, the latter grade being found in no other corps, although the act of 1832 for raising the battalion of rangers refers to the existing laws for the compensation of officers of that grade.

2. It has been thought proper to designate, in general terms, the duties of the administrative departments of the army, leaving them, however, to be specified in detail, as heretofore, by the general regulations for the army.

3. The practice of the service being to separate the topographical engineers and their assistants from the line of the army, it is proposed to give them ordinary rank instead of brevets, as now required by law; and in general, where an appointment on the staff confers rank on an officer, it is proposed to omit the provisions of law which are now regarded as authorizing such an officer to retain his appointment in the line. As, for instance, in the cases of two of the quartermasters, and one of the commissaries of subsistence, the proposed alteration will not affect any rights which such an officer may now have, as those rights are secured by the repealing clause of this act.

4. The term *Ordnance department* being used to designate the whole ordnance service, the body of officers appointed especially for that service is styled the *ordnance corps*.

5. The following are the principal changes proposed in the Rules and Articles of War:

1. To extend the provisions of the 18th and 19th articles, relative to returns, to *all returns* lawfully required of an officer, instead of limiting them of a special nature; this is done by the 24th and 32d of the revised articles.

2. To extend the power of appointing general courts-martial to the *President of the United States*, and to a *general officer* commanding a separate department; also, to the *commander of the corps of engineers* for the government of the Military Academy.

3. To extend the power of appointing *garrison or detachment* courts-martial to *any officer*, (not under the rank of captain,) whether he have command of troops belonging to several corps or to one.

4. To omit the 86th article of war as unnecessary and inconvenient if applied in practice. The commanding officer of a post not being competent to appoint a general court-martial, even if he have a sufficient number of officers under his command, a reference to the commander of the department, or some other competent authority, must be made in *all cases* requiring the cognizance of such a court, and such commander will direct the court to assemble whenever it may be most convenient to the public service.

5. To define the authority by which courts of inquiry may be appointed, limiting it to those officers authorized to appoint general courts-martial.

6. To extend the application of the Articles of War to *all sutlers*, whether in quarters or in the field; and to modify the 96th article, so as to make it applicable to the class of persons embraced in it only when they may be serving with an army in the field. At present, if strictly construed, it will apply to workmen and laborers on fortifications, and in armories or arsenals.

7. The four articles of war in section 4, "of rank and command," are copied literally from the present code; the manner of construing them having been established by the decision of the government, and the custom of service. In the following articles, however, which are submitted as a substitute for those in section 4, the force of expression is thought to be more definite, to wit:

Of Rank and Command.

ARTICLE 78. Officers of any regiment or corps doing duty together, unmixed with officers of the regiments or corps, shall take rank according to the commissions by which they may be mustered in their own regiment or corps.

ARR. 79. Officers not of the same regiment or corps doing duty together on detachments or in *councils of war, military boards, courts-martial, or courts of inquiry*, may take rank according to their brevets, or the dates of their former commissions.

ARR. 80. Officers of the regular forces doing duty with officers of the like grade belonging to any militia or volunteer forces in the service of the United States shall have precedence of and shall command such officers of the militia or volunteer forces, although the commissions of the latter officers may be of elder date.

ARR. 81. On marches, guards, or in quarters, where *troops belonging to different regiments or corps* shall happen to join and do duty together, or when *any of the regular forces shall happen to join and do duty with any militia or volunteer forces in the service of the United States*, the eldest officer present there on duty, whether of the regular or other forces, with the exception specified in the preceding article, shall command the whole, and give the orders needful for the service; unless the President of the United States shall otherwise specially direct, according to the circumstances of the case.

8. In article 79 (of the above) the terms "*former commissions*" are understood to mean a commission of the same grade with that by which an officer is mustered in his own regiment or corps, but of prior date, such cases being created by the transfer of officers from one regiment or corps to another, as will be seen by a reference to the Army Register.

9. It will be remembered that, by adopting the 81st of the above articles, and omitting the 63d of the present articles, full scope will, under the circumstances specified, be given to the exercise of every officer's *right to command* according to his rank, (whether by brevet or otherwise,) unless the President should make a special assignment of command. This is the reverse of the construction now generally given to the 62d article of war, but appears to be the provision most consistent with military propriety.

There are some provisions of law in which the officers of the army are incidentally concerned, which it has not been deemed necessary to introduce into this act—such as those relating to the militia, to intercourse with the Indian tribes, quarantine laws, &c. In case of the passage of this act, these provisions would form a proper appendix for that purpose. It is not necessary that they should be re-enacted.

22D CONGRESS.]

No. 534.

[2D SESSION.]

APPLICATION OF MAJOR GENERAL ALEXANDER MACOMB FOR BREVET PAY, WITH THE OPINION OF THE ATTORNEY GENERAL, AND SEVERAL STATEMENTS ON BREVET RANK, DUTIES AND PAY, AND ARMY REGISTERS FOR 1818 AND 1821.

COMMUNICATED TO THE SENATE DECEMBER 11, 1832.

To the honorable the Senate and House of Representatives of the United States:

The memorial of Alexander Macomb respectfully sheweth: That your memorialist had the honor, during the late war, to receive from the President of the United States a brevet commission of major general in the army; and that, since the date of the same, he hath, as an officer of that rank, been placed by the Executive in command of various stations and departments of great importance and responsibility, in all which he hath endeavored to discharge, to the utmost of his ability, the duties devolved upon him.

He hath received for these services, since the passage of the act of 1818, only the pay and emoluments of a brigadier; it being thought by the executive officers of the government that the laws of the United States regulating the pay and emoluments of brevet officers of the army precluded them from applying to him that rule of compensation which had been adopted towards other officers.

It has been considered that the law of 1818, though it does not expressly repeal the act of 1812 upon the subject, does so impliedly; and that therefore your memorialist, though placed in command of a separate department, and one at least as important and responsible as any other, and having under his command a much more considerable numerical force than any other officer, was, nevertheless, as that force was not regularly organized into what might be regarded, technically, as a division of the army, precluded from receiving pay according to his brevet rank.

Your memorialist, considering it at least doubtful whether it was the intention of Congress to repeal the provisions of the former law, cannot however believe that it was designed to make the reward of an honorable and meritorious service depend upon the formality of any peculiar organization of the station or forces placed under the command of such an officer; so as to allow the pay according to the rank, in some instances, and deny it in others where the service was equally important and responsible, and the force under his command numerically greater.

Such, however, has been the situation of your memorialist; and while other brevet officers have received their pay according to their brevet rank, (as will appear in several instances,) he, though placed in stations, as he conceives of equal command in importance and of greater expense, has been deemed, though with an admission of the fairness and justice of his claim, unentitled from the peculiar terms of the law to the same rule of allowance. Under such circumstances, therefore, he would feel justified in presenting his claim to the Congress of the United States, where alone it can be considered and decided according to the principles of justice.

There is, however, a circumstance in his present situation which obliges him to offer his claim to the consideration of the present Congress.

Your memorialist, in the year 1811, became of one the sureties of Samuel Champlain, lieutenant of artillery, in a bond to the United States, as a paymaster. This officer, in the year 1813, was promoted to the rank of major in the Quartermaster's department, and acted in that capacity during the war; and your memorialist, not only confiding both in the honor of the officer and in the care of the officers of government, that his accounts as paymaster would be regularly settled according to the provisions of the law, and that such a promotion precluded the possibility of prior default, but being also then continually engaged in the public service during a most eventful period, and in distant scenes, made no inquiries as to the accounts of the said officer, or his liability as his security.

Recently, however, he finds, on the promotion of this officer, no settlement of his previous accounts had been required or enforced according to law; and although (as he is informed by that officer, and as he verily believes,) the large balance appearing by his accounts to have been in his hands at the time of his promotion was immediately expended by him as quartermaster under his new appointment, yet that balance (the officer being unable to discharge it) is now claimed from your memorialist as his surety; and a suit hath been instituted against your memorialist, in the name of the United States, in which, as he understands, the sum of ten thousand dollars is claimed to be recovered of him as such surety.

Your memorialist, therefore, confidently trusting that he is asking no more than the same measure of justice from the country he has endeavored to serve than it has awarded to others, respectfully requests that the accounting officers of the government may be allowed to settle his accounts according to his brevet rank; and to apply what may be so allowed him to the credit of the demand of the government now prosecuting against him, and to pay him whatever may remain due after satisfying that demand.

ENGINEER DEPARTMENT, *January 1, 1827.*

SIR: I beg leave to ask you to consider the following claim which I make to the pay and emoluments of a major general under the brevet commission which I have the honor to hold.

I should have advanced this claim long since had I not believed it would have produced an injurious effect, with regard to the general interests of the army, on the minds of the members of the national legislature; but since I have learned that Brevet Major Generals Gaines and Scott have both been in the constant receipt of their brevet pay under the law without involving the injurious consequences alluded to, I feel the more confident in bringing to your consideration my claim to the same allowances as they have received under my brevet commission as major general.

The principles on which Generals Gaines and Scott are entitled to their brevet pay is that they have commands according to their rank as major generals, that is, each commands a separate department or district, or that a number of troops equal to a division are under their respective commands.

My case is one that comes under the law with equal force and propriety with theirs; but there has been no declared official interpretation of the law in favor of my claim, although the law will fairly admit such interpretation, except as to my command from April 16, 1818, to May 31, 1821, at Detroit, which

was a separate department or district and separate post, having all the requisites on which to found my claim in the same manner on which that of General Scott or General Gaines founded theirs.

The act of Congress passed July 6, 1812, section 4th, enacts that "the President is hereby authorized to confer brevet rank on such officers of the army as shall distinguish themselves by gallant actions or meritorious conduct, or who shall have served ten years in any one grade; provided that nothing herein contained shall be so construed as to entitle officers so brevetted to any additional pay or emoluments, except *when commanding separate posts, districts, or detachments, when they shall be entitled to and receive the same pay and emoluments to which officers of the same grade are now or hereafter may be allowed by law.*"

Under the provisions of the foregoing section the President honored me with a brevet of major general, dated September 11, 1814, for successfully conducting the defence of the northern frontiers of the States of New York and Vermont, and particularly for gallantry and good conduct in the battle of Plattsburg.

A subsequent act of Congress was passed on April 18, 1818, which does not repeal in any particular the above-recited 4th section of the act of July 6, 1812, but seems rather intended to be an explanation of that law, and to limit the authority of the President with regard to conferring brevet commissions, making it obligatory on him to submit such brevet commissions as he should think proper thereafter to confer to the Senate for its advice and consent in relation thereto.

The law is in these words: "An act regulating the pay and emoluments of brevet officers.

"SECTION 1. *Be it enacted, &c., &c.*, That the officers of the army who have brevet commissions shall be entitled to and receive the pay and emoluments of their brevet rank when on duty and having a command according to their brevet rank, and at no other time.

"SECTION 2. *And be it further enacted*, That no brevet commission shall hereafter be conferred but by and with the advice and consent of the Senate."

The letter of the last-recited law admits of great latitude of interpretation. There is nothing in the phraseology of that law which implies a repeal of the 4th section of the act of July 6, 1812. There is a restriction only so far as it regards the authority vested in the President to confer brevet commissions, by making it obligatory on him, as before stated, to obtain the advice and consent of the Senate thereto; whereas, under the act of 1812, the President could of his own accord confer brevet rank for long and distinguished services. The 4th section of the act of July 6, 1812, then, continues in full force, with the restriction on the power to confer brevet rank, while the act of April 16, 1818, *regulating the pay and emoluments of brevet officers*, confirms the provisions of the 4th section of the act of 1812, at the same time it extends the privileges of brevet officers by allowing them their pay and emoluments as such *when on duty and having a command according to their brevet rank*. Now, the law of 1812 restricts the allowance of brevet pay and emoluments to the commanders of separate posts, districts, or detachments, that is, to the brevet officers having the chief command of such separate posts, districts or detachments; and the law of 1818 allows pay and emoluments to all "officers of the army who have brevet commissions when on duty, and having a command according to their brevet rank; and this law has been explained by a regulation (see Army Regulations, article 71, paragraph 1124) to mean that "brevet officers shall receive the pay and emoluments of their brevet commissions when they exercise command *equal* to their brevet rank. For example, a brevet captain must command a company; a brevet major and a brevet lieutenant colonel a battalion; a brevet colonel a regiment; a brevet brigadier general a brigade; and a brevet major general a division." And it is also admitted that a numerical force equivalent to any one of those divisions and subdivisions may constitute a command, that is, five companies, though of different regiments, will be equal to a battalion, and ten companies equal to a regiment, and so on. There is, undoubtedly, a great propriety and justice in extending the provisions of the law of 1818 to the brevet officers acting in a *subaltern* capacity at the heads of divisions, brigades, regiments, battalions, and companies, according to their rank; that is, to brevet officers who are not commanders-in-chief of separate armies, posts, districts, or detachments. I should humbly conceive that it is the importance of the command more than the numerical force that should decide whether the command was *according* to the rank of an officer; and, for the sake of illustration, let us imagine that the post of New Orleans with three battalions was in the estimation of the Executive a command of sufficient importance to justify the assignment of a brigadier general or even a major general to that command, having reference to its position, to the probability of some difficulties likely to arise, and the necessity of *high rank* to insure to the national officer, under certain circumstances, the power to command the militia when called out to aid in the defence of the country; would not such a command be far more important, far more responsible, and requiring greater experience and talents, and the exercise of higher attributes than the mere command of a division or brigade of troops under the command of another? And ought not such a command to warrant an allowance of brevet pay under the law as a *command according to brevet rank*? Certainly it would; and so the law of 1812 provides for the brevet officers when commanding in chief separate posts, districts, or detachments, their brevet pay; that is, to such brevet officers as may be assigned to such separate commands, and the law of 1818 to all enumerated in the act of 1812, with the addition of such as command in subordinate stations according to their brevet rank.

The law of 1818 does not define that a brevet major general shall command a division to entitle him to the pay and emoluments of his rank; but, as before recited, it declares simply that *when on duty, and having a command according to his brevet rank*, then he shall be entitled to the pay and emoluments of his brevet rank; but the construction given by the Executive does define what the command shall be; so it is equally competent for the Executive to declare, if he thought proper, the command of the subjects intrusted to the chief engineer, equal to the command of either Major General Gaines or Scott, and, consequently, equal to the command of a major general, and to entitle Major General Macomb to his brevet pay as such. Mr. Calhoun would never decide the question with respect to Generals Gaines and Scott as it regarded their right to draw their brevet pay; nor would he in my case, although he often assured me that my command was equal, if not superior, to the command of either of these generals. It was the Comptrollers of the Treasury who decided that their claim was just under the construction given to the law by the regulations; and mine is also admitted by the Second Comptroller to be equally just, but wants the sanction of the Secretary of War. But I have no such recourse, as the regulations do not define any other commands than such as are in the line of the army. I must, therefore, ask the decision of the War Department in my favor, believing that my command is equal to that of a major general, and that I am, of course, entitled to my pay and emoluments as such; the expression of such opinion would authorize the accounting officers to settle with me accordingly. I will now enumerate the objects and extent of my command and exhibit the numerical force under each head:

1st. The command of the corps of engineers, numerical force.....	2, 356 men.
2d. The command of the corps of topographical engineers.....	180 "
3d. The command of the Military Academy and the corps of cadets.....	373 "
4th. The command of the corps of civil engineers.....	2, 037 "
Total number of men.....	<u>4, 946</u>

The first embraces the direction of the fortifications of the United States.

The second, the topographical surveys of the coast and of the interior.

The third, the inspection, control, and administration of the Military Academy.

The fourth, the internal improvements by roads and canals, the clearing of rivers of obstructions, and the constructions of harbors.

To these may be added the superintendence and examination of the expenditure of the appropriations applicable to these objects, as all the money is issued on requisitions made by the chief engineer, and all the accounts examined by him and approved before they go to the Auditors of the Treasury for settlement—a duty exceedingly arduous and of great responsibility, as the sums appropriated annually for objects under the direction of the Engineer department are from six hundred thousand dollars to upwards of a million, averaging for the last four years nine hundred and fifty thousand dollars.

The geographical extent of my command is coequal with the whole United States and their Territories.

Although I have stated above that there is no regulation which applies to the case under consideration, there are, nevertheless, decisions exactly in point, one of which I will state. Brevet Major De Russey, who is a captain in the corps of engineers, was appointed to the command and superintendency of the works on the Gulf of Mexico. His command consisted of a number of forts and officers of engineers, civil assistants, mechanics, and laborers; amounting in all to upwards of four hundred, which was deemed equal to a battalion of infantry at least; and it was, in consequence, decided that he was entitled to his brevet pay, and he received it accordingly. So in the case of Brevet Lieutenant Colonel Totten, of the corps of engineers, who is a major in that corps. Those are two cases in point,* and furnish precedents for confirming my claim, for the law does not point out what a command of an officer may be. It is a regulation of the War Department to cover commands in the line of the army which has been established; but as it regards the engineers it is left subject to the decision of the Executive. Now, the law creating the corps of engineers places the senior officer of that corps at West Point, which is its established headquarters; but in the arrangement of the army the President has thought proper to establish a separate command at Washington, called the Engineer department, and to assign me to that command in the quality of major general, and has thought proper, from time to time, to augment my command and duties to the amount stated in this paper; the extent and importance of which are too manifest to admit, for one moment, that they are inferior in numerical or geographical extent to those of either Generals Gaines or Scott, who both, for distinguished services, received the brevet commissions of major generals, and who, in consequence of holding them, enjoy the pay and emoluments attached to their rank. I, with a superior command and honored with the same distinction as to rank, and obtained under the same circumstances, do not enjoy the same privileges—a distinction which certainly was not contemplated by the law, and certainly not warranted by the principles of justice and equity.

Respectfully submitted.

ALEX. MACOMB, *Major General and Chief Engineer.*

HON. JAMES BARBOUR, *Secretary of War.*

A comparison of the commands of Major Generals Scott, Gaines, and Macomb.

	Officers and men.
Major General Scott commands the eastern department, which comprises all the territory east of a line drawn from the southernmost point of East Florida to the northwest extremity of Lake Superior, and contains by the last returns.....	2, 092
Major General Gaines all west of that line, and called the western department, and contains by last returns.....	2, 123
Major General Macomb's command extends over both eastern and western departments, and contains, according to statement herewith.....	4, 946
So that, computing a regiment of five hundred men,	
General Scott will have.....	4 regiments.
General Gaines will have.....	4 "
General Macomb's equal to.....	10 "

The within statement is respectfully submitted to the Second Comptroller of the Treasury for his decision.

1st. I claim my brevet pay and emoluments as a major general while commanding at Detroit, having under me all the posts in Michigan, Ohio, and Indiana, constituting the fifth military department, which was similar to the commands of Major Generals Gaines and Scott, who received their brevet pay and emoluments, viz: April 16, 1818, to May 31, 1821.

2d. From June 1, 1821, to May 23, 1823, while in charge of the Engineer department, having a command according to my brevet rank as major general, as will be seen by the within statement.

ALEX. MACOMB, *Major General.*

* Brevet Colonel Bomford, of the Ordnance Department, furnishes in his case another precedent.

No. 2.

Report of Comptroller Richard Cutts on the claim of Major General Macomb.

TREASURY DEPARTMENT, *Second Comptroller's Office, July 14, 1828.*

SIR: I have carefully examined the papers you presented for my consideration. The act of the 6th of July, 1812, authorizes the President to confer brevet rank, on certain conditions, and officers so brevetted are entitled to the pay and emoluments when commanding separate posts, districts, or detachments. This act is still in force. By the act of 18th April, 1818, it is enacted that the officers of the army who have brevet commissions shall be entitled to, and receive the pay and emoluments of their brevet rank when on duty, and having a command according to their brevet rank, and at no other time. The rules and regulations for the army of May 8, 1818, designate the numerical command necessary to entitle a brevet officer to his pay and emolument. For example, "a brevet captain must command a company, a brevet major or lieutenant colonel a battalion, a brevet colonel a regiment, a brigadier general a brigade, a brevet major general a division." From the foregoing it will be seen that the rules and regulations point out precisely the numerical force that entitles a brevetted officer to his pay and emoluments, leaving no discretion with the accounting officers. By the 9th section of the act of the 24th April, 1816, the Secretary of War, by the consent and advice of the President, is authorized to alter the rules and regulations for the government of the army, if the public interest shall require it. Under this provision, I presume, General Macomb was authorized by the President (Mr. Monroe) to receive the brevet pay and emoluments of a brigadier general, as chief of the engineer corps; Colonels Thayer and Totten that of a brevet colonel; Major De Russey that of a major; Colonel Bomford, of the Ordnance department, that of a colonel; Col. Abert, of the engineer corps was allowed his brevet pay and emoluments by Mr. Secretary Barbour. All the foregoing named officers are exceptions to the rules and regulations, and have been allowed by the special order of the late President or Secretary of War, except Colonel Abert, whose pay, &c., was allowed by the late Secretary of War (Mr. Barbour.) The officers above-named have received their brevet pay and emolument, to the extent of their brevet rank, except General Macomb.

Upon a full view of the whole case, as here submitted, I do not see any reason why, on the principles of justice and equity, Major General Macomb's claims to his brevet pay, &c., as a major general, are not as good as those of either Generals Scott or Gaines, as the number of men employed under his direction, by the accompanying statement, is equal to theirs; but, inasmuch as the regulations point out what is the specific amount of the command of a major general in the line of the army, and as all allowances of brevet pay to officers having command out of the line, have been settled by special reference to the War Department, or to the Executive, I do not feel myself authorized to admit said claims, without the special sanction of the President or the Secretary of War. With these remarks, I return to Major General Macomb his papers, setting forth his claim to the brevet pay and emoluments of a major general.

I am, respectfully, sir, &c.,

RICHARD CUTTS.

Major General Macomb.

No. 3.

Letter of General Macomb to the Secretary of War on the subject of his claim to brevet pay.

WASHINGTON, *February 20, 1829*

SIR: Since I placed in your hands my claim for the brevet pay of major general, with a report of the Second Comptroller, acknowledging the justice of that claim, I have seen the report of the Military Committee of the House of Representatives on the subject of brevet rank; and I find, in reading it, that the report goes fully to substantiate my claim in a legal point of view, while the equity of it stands confessedly on its own showing, and the opinion of the Second Comptroller.

Ist. Generals Gaines and Scott received the pay and emoluments of major generals by brevet, when commanding separate districts, under the law of 1812, 6th of July.

I commanded a separate district and post, and was senior brigadier general in the army; but, not knowing the operation of the law, did not claim the brevet pay until I learned that Generals Gaines and Scott received pay on their brevets.

2d. That so much of the act of 6th July, 1812, as relates to pay to brevet officers when commanding separate districts, posts, or detachments, it is admitted by the chairman of the Military Committee of the House of Representatives, and the chairman of the Military Committee of the Senate, as it will appear by reference to their respective reports. The concluding argument of the committee of the House, in its report on the memorial of General Scott, and to which I beg leave to refer, says: "Taking a general view of brevet rank, the committee neither regards it as merely honorary, or as equal to, and identified with, lineal rank. It is not merely honorary; for where the contingencies occur which are adverted to in the 61st Article (of War) a brevet officer has of right the commands which are there given him; he is also, of right, entitled to the pay and emoluments which are allowed to him by the acts of 1812 and 1818," recognizing the principles set forth in my letter, sustaining my claim, above alluded to; and both the bills reported by the military committees of the Senate and of the House of Representatives seem to recognize the principle fully. I will not trouble you with any further remarks on the subject, but will respectfully refer you to my letter in your possession presenting my claim, the report of the military committee herewith enclosed, and the two bills reported by the committees of the Senate and of the House of Representatives having reference to brevet rank, &c.

Respectfully submitted,

A. MACOMB, *Major General.*

HON. PETER B. PORTER, *Secretary of War.*

Extracted from the reports on file in the Engineer department.

BENJAMIN FOWLER, Clerk.

B.

Adjutant General's certificate.

ADJUTANT GENERAL'S OFFICE, April 25, 1831.

It appears from the records of the Adjutant General's office, that the 5th military department of the late north division was commanded by Brevet Major General Macomb, from 1818 to the period of the reduction of the army in June, 1821. It also appears that the number of companies which composed General Macomb's command, during the period above specified, exceed the number of companies stationed within the military departments commanded by Brevet Major General Scott for the years above-mentioned.

R. JONES, Adjutant General.

C.

Report of General Macomb on brevet pay to officers of the army.

HEADQUARTERS OF THE ARMY, Washington.

Is a brevet officer entitled to pay and emolument? If so, under what laws, and under what circumstances?

There are but two laws which relate to the allowing of pay and emoluments to brevet officers—the act of the 6th of July, 1812, and the act of 16th of April, 1818. The act of the 6th of July, 1812, fourth section, is in these words: "That the President is hereby authorized to confer brevet rank on such officers of the army as shall distinguish themselves by gallant actions or meritorious conduct, or who shall have served ten years in any one grade; provided, that nothing herein contained shall be so construed as to entitle officers so brevetted to any additional pay or emolument, except when commanding *separate posts, districts, or detachments*, when they shall be entitled to and receive the pay and emolument to which officers of the same grade are now, and hereafter may be, allowed by law."

This is the first act of the Congress of the United States, under the present Constitution, which authorizes the conferring of brevet rank. Brevet rank, as authorized by this act, is a reward for long, faithful, and distinguished public services; it may be considered in the light of a contract, and points out the particular circumstances under which an officer so brevetted would be entitled to the pay and emoluments of his brevet rank. If, then, this law may be considered in the light of a contract, then is a right vested under that contract which cannot be taken away by any repeal of the law.—(Fletcher vs. Peck, 6 Cranch, 88.) So under the act above quoted, to wit: 4th section of the act of July 6, 1812, a brevet officer commanding a *separate post, district, or detachment*, is entitled to and shall receive the same pay and emoluments as are allowed by law to other officers of the same grade. The act of the 16th of April, 1818, is in these words: "That officers of the army, who have brevet commissions, shall be entitled to and receive the pay and emoluments of their brevet rank when on duty, and having a command according to their brevet rank, and at no other time." There is nothing in the law last quoted, as far as I can perceive, that either repeals, supersedes, or abrogates the act of the 6th of July, 1812. This latter act seems rather intended by its phrasing to extend the privileges of brevet officers by allowing pay and emoluments to all brevet officers *when on duty and having a command according to their brevet rank*. Now the law of 1812, on the contrary, restricts the allowance of brevet pay and emolument to brevet officers when they may be in command of *separate posts, districts, or detachments*, that is to say, to brevet officers exercising a chief command of *separate posts, separate districts, or separate detachments*, while the law of 1818, as explained by the army regulations, allows to brevet officers their pay and emolument while exercising a command *equal to their brevet rank*; as, for instance, a brevet captain commanding a company, a brevet major a battalion, a brevet colonel a regiment, a brevet brigadier general a brigade, or a brevet major general a division.—(Sec Regulation, article 71, par. 1124.)

And it has been further decided that a command composed of different regiments, companies of different regiments, or detachments of different corps, amounting to any of the above-mentioned divisions or subdivisions, may be counted equal to a command entitling to brevet pay and emoluments according to rank. The law admits of great latitude of construction, it must be allowed. I am, however, clearly of opinion that so much of the law of the 6th of July, 1812, 4th section, as points out when a brevet officer shall be entitled to his pay and emoluments as such, is still in force, and not repealed by the act of the 16th of April, 1818. In this opinion I am sustained by the report of the Military Committee of the House of Representatives as declared by Colonel Drayton, its chairman, in answer to the memorial of General Scott.—(See documents.) In this report it says: "Taking a general view of brevet rank, the committee neither regard it as merely honorary, or as equal to, or identified with lineal rank. It is not merely honorary, for when the contingencies arrive which are adverted to in the 61st article, a brevet officer has, of right, the commands which are then given him; he is also of right entitled to the pay and emoluments which are allowed to him by the acts of 1812 and 1818." Here it is clearly shown that was the opinion of the Military Committee that the act of 1812, as far as it regards the allowing of pay to brevet officers, is not repealed by the act of 1818. The conclusion, then, is, that the act of 1812 is in force. It may be made a question whether it be competent for Congress to violate the contract implied in the 4th section of the act of the 6th July, 1812, by repealing the said 4th section as it regards those officers who have received brevets under that law so as to deprive them of the pay and emolument which that law allows to them when commanding *separate posts, districts, or detachments*. It has been decided in the courts of the United States that "a party to a contract cannot pronounce its own deed invalid, even though that party be a sovereign State."—(See *Fletcher vs. Peck*, 6 Cranch, 88.) Indeed, it would appear from the bills presented by the Military Committees of both houses of Congress, at its last session, for abolishing the rank of major general, and regulating brevet pay in the army, that those committees were of opinion that the 4th section of the act of the 6th July, 1812, was still in force; also, the act of the 16th of April, 1818; otherwise why should these committees attempt to modify them? From the foregoing reasoning, I come to the following conclusions:

1st. Officers commanding separate posts, districts, or detachments, who have brevet rank, are entitled to the pay and emoluments of that rank, under the provisions of the 4th section of the act of the 6th of July, 1812.

2d. That a brevet officer having a command under another, or a brevet officer who is in the chief command, may receive his brevet pay, provided the amount of the force under his immediate and direct command shall correspond with his brevet rank, or, in other words, be equal to or *according to* his brevet rank. For example, a brevet captain commanding a company, or a number of men equal to a company; and so with any other brevet officer.

3d. An officer of engineers, having peculiar duties to perform, and his command being also of a peculiar character—for instance, the direction of the public works, fortifications, Military Academy, &c.—such engineer officer ought to be allowed, by a fair construction of the law, the advantages that might be obtained by any brevet rank which he might possess; as, for instance, a lieutenant of engineers, possessing the brevet rank of captain, directing a work, and having under his command as many men as would amount to a company in the line of the army, would be entitled to the pay of a captain; and a brevet major or brevet lieutenant colonel of engineers, directing works at which were employed a number of men equal to a battalion, whether soldiers or laborers and artificers, would be entitled to the pay of their respective brevet ranks. It would be but an equitable construction of the law; otherwise a brevet officer of engineers would not be entitled to any benefit from his brevet commission, however honorably obtained, and would, therefore, not enjoy privileges in common with other officers of the army, which certainly could not have been the intention of Congress. It may, therefore, be inferred, with great propriety, that the indefinite expression, "*according to their brevet rank*," was employed in the law to give such a latitude to its construction as not to exclude any corps or class of officers from its benefits.

Respectfully submitted to the Secretary of War.

ALEX. MACOMB, *Major General*.

WASHINGTON, July 31, 1829.

SIR: I beg leave to submit to your decision my claim to brevet pay as a major general. I hope it may be either laid before the President or the Attorney General, if you find any difficulty in deciding upon the claim as presented in the enclosed papers.

With perfect respect, I am, sir, your obedient servant,

ALEX. MACOMB, *Major General*.

HON. JOHN H. EATON, *Secretary of War*.

The President of the United States of America to all who shall see these presents, greeting:

Know ye, that I do hereby confer on Brigadier General Alexander Macomb, of the army of the United States, the rank of major general by brevet in said army, to rank as such from the 11th day of September, in the year of our Lord one thousand eight hundred and fourteen, for his gallantry and good conduct in defeating the enemy at Plattsburg.

And I do strictly charge and require all officers and soldiers under his command to obey and respect him accordingly; and he is to observe and follow such orders and directions, from time to time, as he shall receive from me, or the future President of the United States of America, and other officers set over him, according to law and the rules and discipline of war. This commission to continue in force during the pleasure of the President of the United States for the time being.

Given under my hand at the city of Washington, this first day of October, in the year of our Lord [L. s.] one thousand eight hundred and fourteen, and in the thirty-ninth year of the independence of the United States.

JAMES MADISON.

By the President,

JAMES MONROE, *Secretary of War*.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the thanks of Congress be, and are hereby, presented to Major General Macomb, and through him to the officers and men of the regular army under his command, and to the militia and volunteers of New York and Vermont, for their gallantry and good conduct in defeating the enemy at Plattsburg on the 11th of September—repelling, with one thousand five hundred men, aided by a body of militia and volunteers from New York and Vermont, a British veteran army greatly superior in number; and that the President of the United States be requested to cause a gold medal to be struck, emblematical of this triumph, and presented to Major General Macomb.

LANGDON CHEVES, *Speaker of the House of Representatives.*
E. GERRY, *Vice President of U. S. and President of the Senate.*

Approved November 3, 1814.

JAMES MADISON.

Arsenal, Waterlot, New York.

Captain Gates, First Lieutenant Welsh, First Lieutenant De Hart, Second Lieutenant Strong, and Second Lieutenant De Hart.

Plattsburg, New York.

Captain Zantzinger, First Lieutenant Thompson, First Lieutenant Eakin, Second Lieutenant Williams, and Second Lieutenant Bowes.

Fort Niagara, New York.

Captain Helleman, First Lieutenant De Russey, First Lieutenant Green, Second Lieutenant Harding, and Second Lieutenant Gates.

Pittsburg, Pennsylvania.

Captain Nourse, First Lieutenant Armstrong, First Lieutenant Wells, Second Lieutenant Ridgely, and Second Lieutenant Buchanan.

Detroit, Michigan Territory.

Captain Mountfort, First Lieutenant Mellon, First Lieutenant Davis, Second Lieutenant Webb, and Second Lieutenant Tomkins.

Mackinac, Michigan Territory.

Captain Legate, First Lieutenant Lyon, First Lieutenant Pierce, Second Lieutenant Chambers, and Second Lieutenant Barney.

THIRD REGIMENT OF ARTILLERY.

Colonel ARMISTEAD, Fort Washington.
Lieutenant Colonel MITCHELL, Fort Norfolk.
Major BARKHEAD, Charleston.
Captain ARCHER, Ordnance.

Annapolis, Maryland.

Captain Jones, First Lieutenant Lendrum, First Lieutenant Lee, Second Lieutenant Hopkins, and Second Lieutenant Stewart.

Fort Washington, Potomac.

Captain Ansart, First Lieutenant Childs, First Lieutenant Boothe, Second Lieutenant Hamtramck, and Second Lieutenant J. Smith.

Richmond, Virginia.

Captain Baker, First Lieutenant Baird, First Lieutenant Hill, Second Lieutenant Bell, and Second Lieutenant Barbarin.

First regiment of infantry, Baton Rouge.

Second regiment of infantry, Sackett's Harbor.

Third regiment of infantry, Green Bay and Chicago. At Green Bay, eight companies; and at Chicago, two companies.

Fourth regiment of infantry, Pensacola.

Fifth regiment of infantry, St. Peter's, Prairie du Chien, and Fort Armstrong. At St. Peter's, seven companies; at Prairie du Chien, two companies; and at Fort Armstrong, one company.

Sixth regiment of infantry, Council Bluffs.

Seventh regiment of infantry, Arkansas and Red rivers. Six companies on Red river, and four companies on the Arkansas.

And the President further directs, until otherwise ordered, that the immediate command of all the troops as above distributed, west of a line drawn from the southernmost point of East Florida to the northwest extremity of Lake Superior, be assigned to brevet Major General Gaines, and that the command of the troops east of such line be assigned to brevet Major General Scott—the whole of Tennessee and Kentucky being considered in the western department.

Norfolk Harbor, Virginia.

Captain Stockton, Captain Lomax, First Lieutenant Mackay, First Lieutenant Fraser, First Lieutenant Spencer, First Lieutenant Adams, Second Lieutenant Corprew, Second Lieutenant Brockenbrough, Second Lieutenant Garner, and Second Lieutenant Kerr.

Fort Johnson, Smithville, North Carolina.

Captain Wilson, First Lieutenant Spotts, First Lieutenant Thruston, Second Lieutenant McKenzie, and Second Lieutenant Feltus.

Charleston Harbor, South Carolina.

Captain Laval, Captain Morris, First Lieutenant Taylor, First Lieutenant J. L. Gardner, First Lieutenant Evans, First Lieutenant Griffith, Second Lieutenant Newton, Second Lieutenant L'Engle, Second Lieutenant Edwards, and Second Lieutenant Lowndes.

Arsenal, Augusta, Georgia.

Captain Craig, First Lieutenant Phillips, First Lieutenant Webber, Second Lieutenant Rigall, and Second Lieutenant Sudler.

FOURTH REGIMENT OF ARTILLERY.

Colonel FENWICK, Pensacola.
Lieutenant Colonel MacREA, New Orleans.
Major EUSTIS, St. Augustine.
Captain WADE, Ordnance.

Fort Jackson, Savannah, Georgia.

Captain Erving, First Lieutenant Symington, First Lieutenant Wright, Second Lieutenant Thomas, and Second Lieutenant Matland.

Fernandina, Amelia Island.

Captain Payne, First Lieutenant J. Monroe, First Lieutenant Washington, Second Lieutenant Hepburn, and Second Lieutenant Morrison.

St. Augustine, East Florida.

Captain Bell, Captain Hobart, First Lieutenant Washburn, First Lieutenant Drane, First Lieutenant Ripley, First Lieutenant T. J. Gardner, Second Lieutenant Sickles, Second Lieutenant Rupp, Second Lieutenant Alberti, and Second Lieutenant Davidson.

St. Mark's, Florida.

Captain Burd, Captain Sands, First Lieutenant McClintock, First Lieutenant Parkhurst, First Lieutenant James Monroe, First Lieutenant Vinton, Second Lieutenant Blaney, Second Lieutenant Hutter, Second Lieutenant Winder, and Second Lieutenant Dusenbury.

Pensacola, Florida.

Captain Pierce, Captain Hayden, First Lieutenant L. Whiting, First Lieutenant Massay, First Lieutenant J. D. Graham, First Lieutenant McNeil, Second Lieutenant Joseph Chambers, Second Lieutenant Thompson, Second Lieutenant Turnbull, and Second Lieutenant Butler.

Fort St. Philip, Louisiana.

Captain E. Humphrey, First Lieutenant Schmuck, First Lieutenant Mead, Second Lieutenant Ward, and Second Lieutenant Welch.

The headquarters of Major General Brown will be in the District of Columbia; the headquarters of the western department will be at Louisville, Kentucky; and the headquarters of the eastern department will be at Governor's island, New York, when the generals are not on visits of inspection and tours of duty.

All officers included in the above list and not on special duty will forthwith join their respective regiments and commands.

Officers who are designated as assistant quartermasters and assistant commissaries of subsistence will forthwith report, by letter, to those departments for specific instructions.

Special orders having been given to local commanders for consolidating and reducing the troops preparatory to this arrangement, all supernumerary non-commissioned officers, artificers, musicians, and privates, if any such remain in service, will be discharged at their respective posts as soon as practicable.

All officers whose names are not included in the above list must consider themselves disbanded on the first of June next, except quartermasters, commissaries, and storekeepers charged with the safe-keeping of public property, who will remain in service until specially relieved from their accountability.

It is deemed inexpedient to continue arrests or proceedings of courts-martial which may have been instituted on officers not retained in the army. All such officers will be released from arrest and discharged from further duty.

All deserters from the army of the United States, previous to the date of this order, may peaceably and safely return to their homes without being subject to punishment or trial on account of such desertion. No reward or expenses will be allowed for apprehending any soldier who deserted prior to this order.

All soldiers in confinement by sentence of courts-martial will be dismissed the service with disgrace.

The regulations relative to transfers is so far suspended that officers may be taken from one regiment or corps and arranged to another, the more perfectly to complete the organization, without consulting the individuals interested, until the 1st of January next.

By order:

D. PARKER, *Adjutant and Inspector General.*

NOTE.—In arranging the lieutenants of artillery to the most convenient stations for immediate duty, attention has not been paid in all cases, by the board of officers, to equal promotion, which must be a subject of future orders.

No. 5.

OPINION OF THE ATTORNEY GENERAL IN THE CASE OF GENERAL MACOMB.

DEPARTMENT OF WAR, *August 5, 1831.*

Sir: In obedience to your order I have examined the argument offered by Mr. Balch in support of the claim of General Macomb to be allowed the pay and emoluments of a major general while he was chief engineer, and, as such, had the charge of the Engineer department from May 1, 1821, to April 30, 1828, and I respectfully submit for your consideration the following report:

By the act of Congress of April 16, 1818, officers who have brevet commissions are entitled to receive the pay and emoluments of their brevet rank "while on duty and having a command according to their brevet rank and at no other time." The expressions "and at no other time," contained in this law, repeal the act of 1812, so far as it gave a title to the pay and emoluments of the brevet rank under other circumstances than those mentioned in the act of 1818.

The whole question referred to me, therefore, turns upon the construction of the above-mentioned act of Congress of April 16, 1818. By this law the title of the pay and emoluments of the brevet rank depends entirely upon the character of the command assigned to the officer, that is, upon the character of the body placed under his command, and he is entitled to the pay of his brevet rank only when the character and organization of that body renders it the appropriate military command of an officer of that grade in the army, for it is then only that he can be said to have a command according to his rank.

It follows that, in order to entitle General Macomb to the pay and emoluments of a major general, the command assigned to him must have been such a one as by the rules and regulations of the army was the regular and appropriate command of a major general. The command which properly belongs to such an officer does not depend upon the number of men placed under his control, nor upon the importance of the duties and station assigned to him. An officer may have a body of artificers and laborers under his direction, engaged in erecting fortifications or in making roads, as numerous as the regular command of a major general; yet such a body of men is not the appropriate command of a major general; he could not be said to have a command according to that rank. The appropriate command of a major general is a division of the army, and the military character of the body, and their organization according to the regulations of the army, here essentially necessary in order to constitute them a division and make them a major general's command. General Macomb did not command a body of this description. The greater part of the persons under his control did not belong to the army, and had neither the military character nor the organization required to constitute a division. He had not, therefore, a command according to the rank of a major general, and consequently, under the act of Congress of 1818, is not entitled to the pay and emoluments of that rank. The construction supposed to have been given to this act of Congress in analogous cases is also relied upon. I have not thought it necessary to inquire on what principle the allowances were made to the several officers mentioned in the argument referred to me. In the case before me the pay and emoluments in question are claimed only upon the ground that the character of the command assigned to General Macomb was such as entitled him to the pay and emoluments of his brevet rank. Whether he is or is not so entitled must depend upon the act of Congress; and if that act, upon its true construction, does not entitle him to the pay and emoluments claimed, the executive branch of the government cannot enlarge its operations beyond the proper meaning of its words, nor allow the pay and emoluments when the legislature have not authorized it to be done.

There is another view of this subject which I beg leave to present to the President. The same question now under consideration was brought before Mr. Monroe while he was President and decided by him in his order of June 12, 1822, and the accounting officers have ever since acted upon this construction of the law. I should doubt very much whether the correctness of that decision can now be properly

inquired into by the Executive branch of the government. It is true that erroneous decisions, founded upon mistakes in matters of fact, or occasioned by mistakes in figures and calculations, may, without doubt, be corrected by their successors in office at any time afterwards when the mistake is discovered. But when the President, acting within the scope of his authority and with all the facts before him pronounces a decision founded upon the construction of a law of Congress, and that decision is acted upon and the account finally settled accordingly, I should incline to think that the account cannot properly be reopened for revision by his successor in office, and if the decision is an erroneous one and injustice has thereby been done to an individual, the remedy is with the legislature. In any other view of the case an appeal would be to each succeeding President from the judgment of his predecessor, and the accounts and transactions of the government would always remain unsettled and liable to be reviewed and reconsidered at any period, however remote. Such right of appeal on the part of the individual does not seem necessary for the purposes of justice and would be exceedingly inconvenient and injurious to the public.

The case of General Macomb, it must be admitted, is one of some hardship. His brevet rank was gallantly earned. It was equal to that of Generals Scott and Gaines, and the command he held was as important and as full of responsibility as the respective commands held by them, yet they received the pay and emoluments of major generals, while General Macomb received only the pay and emoluments of a brigadier. I am persuaded that, if the subject had been brought before Congress, they would have felt the justice of placing them all upon the same footing, and I should have taken pleasure in finding myself justified in reporting in favor of the claim he makes. But upon a careful examination of the whole case, I think his claim cannot be lawfully allowed, and report accordingly.

I am, sir, with the highest respect, your most obedient servant,

R. B. TANEY, *Acting Secretary of War.*

The PRESIDENT of the United States.

Approved August 6, 1831.

ANDREW JACKSON.

22D CONGRESS.]

No. 535.

[2D SESSION.

ON THE EXPEDIENCY OF ENLISTING MINORS INTO THE ARMY, AND IMPROVING THE CONDITION OF THE RANK AND FILE OF THE ARMY, BY ESTABLISHING SCHOOLS, RETAINING THE WHISKEY RATION, AND EXEMPTING THOSE SERVING FOUR YEARS FROM MILITIA DUTY, &c.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 17, 1832.

HEADQUARTERS OF THE ARMY, *Washington, February, 1832.*

SIR: Agreeably to the request contained in your letter of the 24th of January, I have the honor of stating here below my opinion of the expediency and practicability of carrying into effect the resolution of the House of Representatives of the 3d of January, referred to the Committee on Military Affairs, on motion of Mr. Ward.

"1st. Of enlisting into the army minors, from the ages of sixteen to seventeen, by and with the consent of their parents or guardians, to serve for the period of four years.

"2d. Of establishing schools at such military posts garrisoned exclusively by the troops so enlisted, for the purpose of teaching such branches of education as will fit and prepare the soldiers for situations of usefulness in life, and of reducing their monthly pay in the ratio of two dollars for every five dollars now paid.

"3d. Of retaining the whiskey portion of the ration, to be paid either in money, military equipments, or in some suitable badge of honor.

"4th. Of exempting all such non-commissioned officers and privates, who shall have served for the period of four years, from militia duty, except in case of war, invasion, or other public emergency; and that the committee inquire how far such enlistments and provisions may tend to destroy or lessen the evil of frequent desertion."

With regard to the several propositions contained in the resolution, I have to remark that I am of the opinion that lads of the proposed age, who might be enlisted into the service with the consent of their parents, in time of peace, would generally, in all probability, be of a character not suited for the public service; that none but idle, profligate, and incorrigible lads, who could not be controlled by their parents or guardians, would be permitted to be enlisted; and should such be enlisted there would be no probability of improving them, as they would come with confirmed habits of idleness, and our discipline is too mild to expect a reformation of them through its means. I would prefer that the ages of the boys should be much younger, and would propose not less than twelve or more than thirteen years, and the term of enlistment to be twelve years, or until they should, respectively, have attained the age of twenty-five years. At such a tender age, the boys might be instructed in the art of reading and writing the English language correctly; and, as they advanced, they should be taught the principles of mathematics, as far as to enable them to apply them to all common calculations, and to practical geometry, for civil and military purposes. I would also propose that they should be instructed in all the various handicrafts, which might be useful to the service in their capacity as soldiers, and which might enable them, after leaving the service, to provide for themselves a decent support. In a word, I would cause them to be instructed after the manner of the cadets at West Point, only beginning at the very rudiments of instruction in everything to be taught. They should be neatly and well-dressed as soldiers, drilled every day in military exercises, and made to perform all the duties of soldiers and non-commissioned officers. For which

purpose I would propose that one of the forts, best situated, should be made the school; and, after the experiment is fully tested, if successful, that other schools should be established at other suitable places. For instance, let us begin the experiment at Fort Monroe, in the Chesapeake, where there are all the accommodations necessary for the purpose. Let there be enlisted five hundred boys, of the age above mentioned, and for the term specified; these boys to receive, for the first three years, three dollars a month, with suitable clothing and rations; then, for two years, the full pay of a soldier; after that, to be promoted to be corporals, and when eighteen years of age to be formed into companies; the most expert soldiers and the best in regard to conduct to be made sergeants. Then send all except two companies to relieve such companies as are in other garrisons, so as to relieve a whole garrison at a time, that there may be none of the old soldiers at any of the posts occupied by the schooled soldiers. Fill up the school at Fort Monroe until the whole of the artillery may be composed of the lads educated at that place, unless other schools should be established for the same purpose. In order to give encouragement to those who have attained the rank of corporal, they should, after serving three years as corporals, be promoted to the rank of sergeants, so that eventually the whole army would be composed of non-commissioned officers, who should perform the duties of privates and non-commissioned officers in rotation, except two in each company, who should be selected from the most deserving, to be sergeant major and quartermaster sergeant of the company, to whom, as a suitable encouragement, a higher pay should be allowed. I would, in like manner, provide for musicians to be instructed according to the same rule, who should have the advantages of education, promotion, and increased pay. If the plan here proposed should be adopted, three points might be mentioned as suitable places for the schools, to wit: Fort Adams, in the harbor of Newport, R. I., Fort Monroe, in the Chesapeake, and Jefferson barracks, in Missouri. As a further encouragement to the troops so educated, I would recommend that the President be authorized to appoint to each military post a post-adjutant and post-commissary, to be selected from the non-commissioned officers who may have served out their term. These post-officers to have the rank, pay, and emoluments of second lieutenants, or of the lowest grade of commissioned officers that then might exist; and, thereafter, that all commissaries of posts be appointed from the non-commissioned officers who had performed their duty faithfully; and that, besides, to each battalion there should be appointed a sub-adjutant, to be also a promotion for the non-commissioned officers, and that, after having attained these places, they shall respectively be considered as candidates for appointments of higher degree in the military establishment, should they continue to merit further advancement. No bounty should be offered for enlistments. The boys should be received after a careful inspection as to health, size, and probable fitness for the duties to be encountered. The punishments should be small deductions from their pay, and confinement to quarters, &c., to be established by a fixed rule. Good conduct to authorize a restitution of the pay deducted, in proportion to amendment. No flogging or other severe punishment should be allowed. The officers who have been educated at the Military Academy should be the instructors of the school, who should receive a small additional compensation in consideration of their services.

The advantages expected to result from the establishment of these schools, are—1st. To render the rank and file of the army more respectable. 2d. To insure good officers and non-commissioned officers for a large army, whenever it may be necessary to augment the military establishment. 3d. To disseminate practical military knowledge more generally throughout the republic; and, finally, to banish vice, and prevent desertion in the army. The soldier, should he think proper to retire from the service at the end of his first enlistment, will retire to his friends with a good education, with a knowledge of some useful trade, and will, in fact, be a valuable citizen wherever he may establish himself. Besides the advantages which would result to the regular forces, men thus educated for military purposes would, on retiring to their homes, be found to be a great acquisition to the militia of their respective States, and therefore ought not to be exempted from duty in the militia, as proposed.

The great difficulty in our country has been the obtaining of persons of the requisite character and intelligence to be non-commissioned officers. In time of war, that class of officers, well instructed, is indispensable to the efficiency of the service. They are so intimately connected with the soldiers that on them, in a great measure, depend the moral character, health, comfort, discipline, and general efficiency of the rank and file. There are so many small, yet essential, duties to be performed by non-commissioned officers, that unless they are well-instructed and practiced in them no system can be pursued; and on the faithful execution of what is entrusted to them the good of the service in a great measure rests. There will also be created, by this plan, a description of officers long wanted in our service, that is, persons of the requisite habits, intelligence, honesty, and carefulness—a kind of isolated staff officers; such, for instance, as post-commissary, post-adjutant, military storekeeper, keeper of magazines of powder and ammunition, keeper of arsenals in which arms are deposited for safe keeping, or for immediate distribution and use. These men, from their habits and their knowledge of such things, would be the most fit persons to occupy such places; and the places would be so many rewards for, and inducements to, good conduct. Some scheme of this nature has been wanted to give respectability to the rank and file of the regular army, to induce good men to enter it; and, finally, to secure to the public faithful and efficient officers for keeping, in a state of preservation, the military supplies, vast quantities of which are constantly accumulating. When it shall be generally known that such advantages are offered to the faithful soldier, there will be no difficulty in filling our ranks, and I have no doubt that applications for admission into the schools of the army will be as pressingly made as they are now for filling the list of cadets at West Point. The advantages, though not in every respect equal, will nevertheless be considered of sufficient importance to claim the attention of many worthy, good people.

To present the whole subject in a more condensed and specific form, I beg leave to offer, herewith, the draft of a bill, which will exhibit more clearly the scheme in view.

I have the honor to be, sir, your most obedient humble servant,

ALEX. MACOMB, *Major General, commanding the army.*

HON. WILLIAM DRAYTON, *Chairman of the Military Committee of the House of Representatives.*

A BILL to improve the condition of the rank and file of the army. *

1. *Be it enacted, &c.,* That, whenever the President of the United States shall deem it expedient, it shall be lawful for him to cause to be enlisted into the army of the United States such number of boys as he may judge proper, whose age, when enlisted, shall not be less than twelve years, nor more than thirteen

years, to serve until they respectively shall have attained the age of twenty-five, unless sooner discharged; provided the said boys shall be enlisted with their own free will, and with the written consent of their respective parents or guardians, if any such they have; and, if they have none, with the approbation of the proper authorities of the town, place, or city, in which such boys may respectively reside.

2. *Be it further enacted, &c.,* That the said boys, when so enlisted, shall be assembled at such military post or posts as the President may direct, where shall be established schools for their instruction in reading and writing the English language, in arithmetic, mathematics, and other proper branches of study; also, in the military arts and exercises, and in such handicraft trades as may be judged useful and proper.

3. *Be it further enacted, &c.,* That the said boys shall be entitled to receive such clothing and subsistence as may be necessary for them, provided they shall not exceed the cost of the clothing and subsistence now allowed to soldiers in the army; and that their pay, respectively, shall be as follows: for the first three years after their enlistment, three dollars per month; the next two years, five dollars a month; they shall then, respectively, be promoted to the rank of corporals, provided their conduct be such as to justify it, and be entitled to the pay attached to that grade. They shall then be formed into companies, with a due proportion of sergeants. The sergeants to be appointed from the most meritorious, as a reward for superiority in good conduct. The said corporals, after serving three years, shall severally be further promoted to the rank of sergeants, provided, as before, their conduct shall justify such promotion, with the pay and emoluments attached to said grade; but they shall, nevertheless, perform the duties of private, corporal, and sergeant, in rotation, according to such rule as shall be established by the President of the United States.

4. *Be it further enacted, &c.,* That the said companies shall be organized in the same manner as the companies now authorized in the several regiments of artillery and infantry, and be officered in like manner, and are to replace such companies, in said regiments, as shall be broken up. To each company there shall be attached one sergeant major, to be charged with the details of the company, under the direction of the captain or commanding officer; one quartermaster sergeant, to be in like manner under the direction of the commanding officer of the company, charged with the clothing, provisions, and other property belonging to the company, whose pay and subsistence, respectively, shall be equal to that of the cadet, with the addition of suitable clothing, to be furnished by the public.

5. *Be it further enacted, &c.,* That such of the non-commissioned officers as shall be employed in other duties than those in the line, as, for instance, in any of the trades they may have been taught, as blacksmiths, carpenters, wheelwrights, harness-makers, whitesmiths, or other handicraft, except military works, in the laboratory, police, or other necessary duties connected with the camp or garrison, shall receive an extra allowance of twenty cents per day; but ardent spirits are, on no account, to be allowed or issued to them as rations, or gratuitously, for services.

6. *Be it further enacted, &c.,* That after the completion of a full term of enlistment by any non-commissioned officer, who has enlisted according to this act in a manner to entitle him to an honorable discharge, the President may authorize the appointment of such non-commissioned officer, so discharged, on the recommendation of the colonel or commanding officer of the regiment to which such non-commissioned officer belonged, or under whom he may have served at the time of his discharge, to any of the following offices, to wit: To be sub-adjutant to a battalion or post, with the pay, rank, and emolument of a cadet, with suitable clothing, provided there be not more than one to each battalion or post, said sub-adjutant to perform the duties heretofore performed by sergeant majors of regiments, to be in lieu of said sergeant majors; post-adjutant, post-commissary, each with the rank, pay, and emoluments of second lieutenant, provided there be not more than one of each appointment to each military post, or to be keeper of military stores, and keeper of magazines and arsenals, under the direction of the Ordnance department, with the pay, rank, and emoluments of the lowest grade of commissioned officers in the line of the army. Besides these said appointments, the said non-commissioned officers, who have faithfully served their term out, shall be otherwise eligible to promotion in the line of the army, according to their respective merits.

7. *Be it further enacted, &c.,* That the President be, and he is hereby, authorized to cause to be detailed from the commissioned officers of the army such number of them as may be necessary to instruct the said boys, who shall be entitled, respectively, to receive an additional compensation of ten dollars a month while actually so employed; and also may cause to be detailed from the army such mechanics, or may direct to be engaged such number of mechanics, of respectable character and of different trades, as may be requisite and capable of teaching the mechanic arts and works proper to be taught to the said boys, in conformity with the second section of this act; the said mechanics to receive the monthly pay of twenty-five dollars, and the rations and clothing of a soldier.

8. *Be it further enacted, &c.,* That it shall be lawful to cause a suitable number of said boys, who may show the natural disposition for the attainment of knowledge in music, to be instructed on the several instruments used in the army, besides the instruction directed to be given to the other boys; the said boys selected for musicians to have all the advantages, as to promotion and appointment, allowed to the others, as they respectively advance in years, and maintain a good standing as to talents and conduct; and to receive the same pay and other allowances, according to rank.

9. *Be it further enacted, &c.,* That if, after the completion of the term for which any of the non-commissioned officers herein mentioned may have enlisted, there shall be no vacant place in the military establishment to which they respectively could be promoted, that they, the said non-commissioned officers, may be re-enlisted for any term not less than one year, and be borne on the rolls of their respective regiments, with the same rank and station held by them, respectively, and for any further term thereafter, as long as they may be fit to perform the duties of a soldier; retaining all the claims to further promotion to which merit and character may entitle them.

10. *Be it further enacted, &c.,* That the whole expense attending the introduction of this system shall not increase the estimated expense of the whole army, as now authorized, including bounties and premiums, and contingencies of the recruiting service; and it shall be lawful for the President to cause to be discharged such of the rank and file of the present army as may make it necessary to keep the expenses of the military establishment within the limits here prescribed.

22d CONGRESS.]

No. 536.

[2d Session.]

ON THE CLAIM OF MAJOR GENERAL ALEXANDER MACOMB TO THE PAY AND EMOLUMENTS OF HIS BREVET RANK.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 18, 1832.

Mr. WARD, from the Committee on Military Affairs, to whom was referred the petition of Major General Macomb, reported:

That it appears from the petition and documents referred to the committee, that in the year 1811 Major General Macomb became one of the sureties of Samuel Champlain, lieutenant of artillery, in a bond to the United States, as a paymaster of the army; that, in the year 1813, the said Champlain was promoted to the rank of major in the Quartermaster's department, and acted in that capacity from that time until the close of the war; that, on his promotion, no settlement of his previous accounts was required or enforced according to law; that said Champlain is now unable to pay a balance found due to the government, and a suit has been instituted against the memorialist, and is now pending against him, in the name of the United States, for the recovery of the sum of \$10,000.

The memorialist states that said Champlain was transferred to the Quartermaster's department during the most eventful period of the late war, and when he, the memorialist, was continually engaged in the public service in distant scenes; and consequently he, the memorialist, could not make inquiries as to the accounts of the paymaster, or his liability as his security. But he states that he reposed entire confidence in the care and vigilance of the officers of the government, and he believed that they would have required the accounts of the paymaster to be regularly settled according to the provisions of the law; and, further, that such promotion precluded the probability of prior default.

The memorialist conceives that, as the officers of the government ought to have required the paymaster to have settled his accounts previous to his being transferred to the Quartermaster's department, that no claim for any default of his, after the lapse of so many years, ought to be made upon him; and therefore he considers his case as one of peculiar hardship, and as meriting the favorable consideration of Congress.

And although he considers that he might, under the statement of the case, ask to be discharged from his liability as such security, yet he forbears doing so; but he prays that Congress will, in consideration of the premises, allow an equitable claim which he has against the government for the pay and emolument of a brevet major general, from April 16, 1818, to April 30, 1828, which he claims to be due him, to be applied as an offset against whatever may be recovered against him as such security.

The facts in relation to this claim of the memorialist are as follows:

On the 11th of September, 1814, the President of the United States, under the act of the 6th of July, 1812, honored him with a brevet of major general for his gallantry and good conduct in the battle of Plattsburg, and for his having successfully conducted the defence of the northern frontiers of the States of New York and Vermont—the President being authorized, under the act referred to, to confer brevet rank on such officers as should distinguish themselves by gallant actions or meritorious conduct, or who should have served ten years in any one grade; which act provides that no officer so brevetted "shall be entitled to any additional pay or emoluments, except when commanding *separate posts*, districts, or detachments, when they shall be entitled to and receive the same pay and emoluments to which officers of the same grade are now or may be hereafter allowed by law."

That, from 1821 to 1828, the memorialist commanded the eastern and western department, as the head of the Engineer department, and the force under his command amounted to 4,946 officers and men; and he claims the difference between the pay of a brigadier general, which he received during that time, and the pay due him as a major general.

This claim was rejected by the accounting officers of the government on the ground that the provision in the act of 1812 which authorized the emoluments claimed by the memorialist was repealed by the first section of the act of April 16, 1818, which provides that officers who have brevet commissions shall be entitled to receive the pay and emoluments of their brevet rank "*while on duty and bearing a command according to their brevet rank, and at no other time*;" and the decision of the accounting officers, on a reference by the President of the United States to the Attorney General, was reluctantly confirmed by him. The Attorney General, in concluding his report to the President, observes: "The case of General Macomb, it must be admitted, is one of some hardship; his brevet rank was gallantly earned; it was equal to that of Generals Scott and Gaines; and the command he held was as important and as full of responsibility as the respective commands held by them; yet they received the pay and emoluments of major generals, while General Macomb received only the pay and emoluments of a brigadier. I am persuaded that if the subject had been brought before Congress, they would have felt the justice of placing them all upon the same footing."

The committee are of opinion that, inasmuch as the officers of the government did not require the said Champlain to settle up his accounts previous to his transfer to the Quartermaster's department, but suffered the case to remain unsettled for so many years, that the memorialist ought in equity to be discharged from all responsibility as such security to said bond; and they therefore report a bill for his relief.

ON CONFERRING MILITARY RANK UPON PAYMASTERS OF THE ARMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 28, 1832.

Mr. R. M. JOHNSON, from the Committee on Military Affairs, to whom was referred the resolution directing them to inquire into the propriety of conferring rank upon the officers of the pay department of the army, reported:

That, from a review of the several acts for the organization of the army, it appears that almost all the officers of the various departments of the staff have been clothed with military rank as essential to the efficient performance of their respective duties; that, previous to the act of March 2, 1821, the officers of the pay department were, with few exceptions, taken from the line of the army, retaining their rank in the line; that, since the passage of the above act, it appears, by reference to the Army Register, that the paymaster general retains the brevet rank of lieutenant colonel, conferred for services in the field during the late war, and the paymaster of the corps of engineers retains his rank in that corps, while the remaining paymasters, though generally appointed from the line of the army, have not retained their rank.

The committee, from an examination of the duties of the paymasters, can find no reason for their exclusion from rank in the army; previous legislation and present practice show that there is no incompatibility in their exercise of it. They, like other officers of the army, are liable to be tried by courts-martial, but, under the existing organization, not holding rank in the army, they are not eligible to sit as members of a court-martial. Every consideration seems to be in favor of extending to this department the privileges of rank enjoyed by the other branches of the staff. It is composed of the same materials. Its members, with two or three exceptions, served in the line of the army during the late war, and several of them with distinction. Their present duties are of an equally military character with those of the other administrative departments of the general staff. In travelling to remote posts with public funds under the escort of soldiers, in making payments to the troops, and upon various occasions of ordinary occurrence, the authority derived from military rank would be of great use in the discharge of their duties.

From a careful examination of the subject, the committee are satisfied that the proposed measure would impart more efficiency and greater capacity for usefulness to the pay department and promote the general interests of the service, while it would not conflict with the rights nor interests of any other portion of the army. Influenced by these considerations they have prepared the bill which is herewith annexed, which provides the rank of colonel for the paymaster general, placing him upon a footing with the adjutant general, the inspector generals, and the commissary general of subsistence; and confers the rank of major upon the paymasters, placing them upon a footing with the quartermasters and assistant commissary of subsistence of the army.

The bill contemplates no additional expense, as the compensation of the paymaster general is fixed by previous legislation, which it is not the intention of this bill to disturb, and the paymasters are already allowed by law the pay and emoluments of the grade which it is now proposed to give them.

Memorandum of the services of the officers of the pay department of the army.

Lieutenant Colonel N. Towson, paymaster general.—Appointed captain of artillery at the commencement of the late war, was engaged with the enemy and captured the brig Caledonia, under the guns of Fort Erie, in 1812; at the battle of Queenstown, the capture of Fort George, the battle of Stoney creek, the capture of Fort Erie, the battles of Chippewa and Lundy's lane, the assault on Fort Erie, during the siege of Fort Erie, and in a cannonade before Chippewa, in October, 1814. He was wounded in action, received two brevets for services in the field, and has the acknowledgment of the Secretary of War that he was entitled to two more; served in the line of the army until 1819, when he was appointed paymaster general.

1. *William Piatt, paymaster.*—Appointed a captain in 1809; promoted to major in 1814; served as quartermaster general, with the rank of colonel, at New Orleans; was distinguished for his gallant conduct, and was wounded at the battle of New Orleans.

2. *D. S. Townsend, paymaster.*—A captain in the army early in the late war; assistant adjutant general, with the rank of major, in 1814; lost a leg in battle, and was brevetted a major in the campaign on the Niagara. If he had remained in the line he would have been at this time a major, with the brevet rank of lieutenant colonel.

3. *A. A. Massias.*—Appointed a captain in the rifle regiment in 1809; served through the war; was wounded, and brevetted a major for his gallant conduct in action.

4. *T. Wright.*—A lieutenant in the twenty-second infantry at the commencement of the war; served with his regiment through the war, on the Canadian frontier; was wounded during the campaign on the Niagara, in 1814. If he had remained in the line to the present time he would have been a brevet major.

5. *A. Wetmore.*—A lieutenant in the twenty-third infantry at the commencement of the war; served with his regiment on the Canadian frontier, and lost an arm in action. If he had remained in the line of the army he would at this time have been a brevet major.

6. *B. F. Larned.*—A lieutenant in the twenty-first infantry early in the war; served with his regiment on the frontier; was brevetted a captain for his gallant conduct at the assault on Fort Erie, in 1814; and if he had remained in the line he would at this time have been a brevet major.

7. *E. Kirby.*—A lieutenant in the fourth infantry at the commencement of the war; served as adjutant of his regiment on the Canadian frontier, through the war; was in several engagements with the

enemy; was more than five years aide-de-camp to Major General Brown, and more than a year acting adjutant general of the army at Washington; was a captain of artillery when appointed paymaster, in 1824.

8. *A. Phillips*.—A lieutenant in the ninth infantry at the commencement of the war; he served with his regiment on the northwestern frontier, through the war; and if he had remained in the line would at this time have been a brevet major.

9. *L. G. De Russey*.—Educated as a cadet at West Point; served during the last campaign of the war as a lieutenant of artillery; was a captain of artillery when appointed paymaster, in 1826.

10. *R. A. Forsyth*.—A cadet during the war; he volunteered and served with distinction upon the expedition from Detroit into Upper Canada, under Major Holmes, in 1814; was appointed a lieutenant in the fifth infantry in 1815; resigned, and served in the Indian department until his appointment as paymaster. If he had remained in the line he would have been at this time a captain.

11. *C. B. Tallmadge*.—Was in the service of the United States, with the rank of major in the militia of the State of New York, during the late war; was appointed assistant district paymaster in the army in 1814, and has served in the pay department until the present time.

12. *T. P. Andrews*.—Served as volunteer on board Commodore Barney's flotilla, in an action with the enemy in the Patuxent, during the late war.

13. *D. Randall*.—Was appointed assistant district paymaster in June, 1814, and has served in the pay department ever since.

14. *C. H. Smith*.—Appointed paymaster in 1819.

[2^D SESSION.]

ON CONVERTING THE CORPS OF MOUNTED RANGERS INTO A REGIMENT OF DRAGOONS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 28, 1832.

Mr. R. M. JOHNSON, from the Committee on Military Affairs, to whom was referred so much of the Secretary of War's report as relates to converting the corps of mounted rangers into a regiment of dragoons, reported:

That upon an examination of the organization of the present battalion of mounted rangers it does appear to the committee to be very defective. The companies are too large for men serving on horseback, and differ too materially from the organization of the other troops composing the army, there being in each company of rangers one hundred and ten men, exclusive of officers, which, when drawn into line, will make a very considerable front, nearly equal to that of a squadron of cavalry. There is but one field officer (and he a major, unprovided with any staff) to command 660 men, while in a regiment of infantry, where the duties cannot be so arduous, and the regiment composed only of 514 men, it has been deemed necessary to provide three field officers and an adjutant and certain non-commissioned staff, with a due proportion of music, none of which are provided for the rangers.

The regiment of dragoons, which it is proposed by the Secretary of War to substitute for the battalion of rangers, will not cost so much for its maintenance as that of the rangers by \$153,932 a year, as it will appear by his estimate accompanying his report. It must be evident from the constitution of the corps of rangers, and from the short period of their service, their efficiency will be but little superior to that of the ordinary militia—every year there must be a loss of time in reorganizing and recruiting the corps and in the acquisition of the necessary experience and knowledge; besides, it cannot be expected that their equipments and horses will be equal to those furnished by the public.

Regular dragoons, it is believed, are fully competent to discharge all the duties that can be required of mounted rangers. In celerity of movement they will, of course, be equal, and as it is the duty of dragoons to serve on horse or foot, they may be trained to the use of the rifle and sword as occasion may require. Besides these important objects, it is desirable to preserve in our military system the elements of cavalry tactics, and to keep pace with the improvements made in them by other nations. The addition of a regiment of dragoons to our present military establishment would make it much more complete, and would introduce a force which would harmonize with and participate in the *esprit du corps* so essential to military efficiency and so easily and certainly created by military principles.

A corps of this kind has long been wanted, and it is now generally conceded that mounted troops are absolutely necessary for that part of the inland frontier in contact with the Indians. In addition to our fixed military posts garrisoned by infantry, the means of protecting the frontier, should such a corps of cavalry as here recommended be raised, would be ample and complete. The committee, impressed with the importance of there being attached to the military establishment a regiment of dragoons, report a bill for that purpose.

[2^D SESSION.]

STATEMENT OF FORTIFICATIONS IN MAINE, THEIR LOCATION, NUMBER OF MEN AND ARMAMENT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 29, 1832.

DEPARTMENT OF WAR, *December 28, 1832.*

SIR: In compliance with the resolution of the House of Representatives of the 9th July last, directing the Secretary of War to report to that House "a statement of the number of fortifications and other military defences in the State of Maine, with their respective locations, number of men, and armaments of each, respectively;" also "his opinion upon the expediency of increasing the military defences of that State," and "such information as he may be able to procure relative to the number and kind of military fortifications erected and maintained in the British North American possessions, and the number of troops therein," I have the honor to transmit a report of Major General Macomb, which contains the information required and the views of the department upon the subject.

I have the honor to be, very respectfully, your obedient servant,

LEWIS CASS.

HON. ANDREW STEVENSON, *Speaker of the House of Representatives.*HEADQUARTERS OF THE ARMY, *Washington, December 26, 1832.*

SIR: In conformity with your instructions to furnish the information called for by the resolution of the House of Representatives of the 9th of July, 1832, I have the honor to state that there are in Maine but three military posts, viz:

One at Portland, garrisoned by a company of the 3d regiment of artillery; one at Eastport, garrisoned by a company of the 3d regiment of artillery; and one at Houlton, garrisoned by four companies of the 2d regiment of infantry.

The armament of these posts is as follows:

At Portland, 8 pieces; at Eastport, 13 pieces; at Houlton, 4 pieces.

In the year 1821 the board of engineers made a reconnaissance of the maritime frontier of the State of Maine, and projected plans of certain works. An extract of their report is herewith transmitted, and to which I beg leave respectfully to refer you as to the defences deemed proper for the protection of the seaboard. The interior defences could not, with propriety, be settled until the decision as to the boundary of the State shall be fully adjusted.

The number of troops maintained in the British provinces adjoining the State of Maine varies according to circumstances. There is one regiment stationed at Frederickton, which furnishes detachments to the different settlements as occasion may require. At St. John's there is a battery of no great extent. At Quebec there is generally stationed a detachment of artillery and two regiments of infantry. The place itself is well known to be a considerable fortress, and has been rendered stronger by a citadel, of a new construction, on Cape Diamond.

At present it is not deemed expedient to erect further works on the frontiers of Maine. A military road, leading from Matanawcook to Houlton, has been opened, and is nearly completed. The works contemplated for the defence of the seaboard come within the second class of fortifications, and some of the most important of them may be commenced in the course of the year 1834.

In addition to the above-mentioned military posts in Maine, an arsenal of considerable extent has been recently erected at Augusta.

I have the honor to be, respectfully, &c.,

ALEX. MACOMB, *Major General.*HON. LEWIS CASS, *Secretary of War.**The northeastern section of the coast.*

The northeastern section is characterized by its serrated coast and its numerous harbors, and though differing in these respects entirely from the other sections, is no less distinguished in its climate by the prevalence, at certain seasons, of dense and lasting fogs. The extent of this section, measuring where the breaks in the coast are abrupt, from point to point, is about 500 miles, while a straight line from Cape Cod to Quoddy Head is hardly half that distance. The eastern half of this coast is singularly indented by deep bays, the shore being universally rocky, and having numerous islands, surrounded by deep water, which not only add to the number of harbors, but afford an interior navigation perfectly understood by the hardy sailors of the country, and measurably secured, by its intricacies and the other dangers of this foggy and boisterous region, from interruption by an enemy. The western half, though it has two very prominent capes and a few deep bays, is much less broken in its outline than the eastern. It is covered by few islands in comparison, but contains, nevertheless, several excellent harbors.

Considering the sparseness of the population in the eastern part of the State of Maine; the little comparative value of any existing establishment there;* the proximity of a province of another power, within which is situated an important post of naval rendezvous, the board think it would be inexpedient to undertake, under present circumstances at least, the defence by permanent works of any position to the east of Mount Desert island; especially as the capture of any work there, wherof the strength would

* Report of 1821.

be proportionate to the importance of the place covered, might, owing to its destitution of succor, be easily achieved by an enemy, who would not fail to profit of its situation to harass both our commercial and naval operations.*

Mount Desert island.—Situating between Frenchman's and Penobscot bays, and centrally as respects the Kennebeck and St. Croix rivers, having a capacious and safe roadstead affording anchorage for first rate vessels, easily accessible from the sea, and being easily defended by batteries, offers a station superior to all others on this portion of the coast for the navy of an enemy. From this point his cruisers can act with great effect against the navigation of the eastern coast, especially that of Maine, and his enterprises of every kind can be conducted with little loss of time against any point he may select. These considerations, added to the advantages which would result from possessing ourselves of a naval station which would afford protection to this commerce, and which would enable us to assume the offensive should our political relations again make it necessary in the immediate vicinity of a formidable provincial establishment of another power, together with the necessity of providing places of succor on a part of the coast where vessels are so frequently perplexed in their navigation by the prevailing fogs, lead the board to the conclusion that the fortification of this roadstead in a strong manner is indispensable.

From the incomplete state of the surveys, however, they are not at present able to state the particular mode nor the expense of the defences.

Penobscot bay.—The next important part of this coast proceeding westward is Penobscot bay. Upon this bay, and upon the river of the same name flowing into it, are situated several flourishing towns and villages. Of the many bays which intersect this coast the Penobscot† is the one which presents the greatest number of safe and extensive anchorages; their number, indeed, is such as to render it inexpedient to attempt under present circumstances the defence of any of them. Unless all were fortified, which would involve an expense out of all proportion to the objects secured thereby, an enemy would find all the shelter he could desire in either of the neglected harbors, while the local interests which would be covered by the defence of either are not regarded as being yet of sufficient amount to excite the cupidity of an enemy, especially considering the protection afforded by an establishment at Mount Desert island against all minor enterprises.

It is necessary, however, to protect the valuable commerce of the bay and river, and to afford a secure retreat for such vessels as, endangered by an enemy, may be unable to place themselves under the protection of the works to the right or left of the bay. The lowest point at which this object can be accomplished without great expense is at the narrows of the river opposite Bucksport, and the board have accordingly presented a project for a fort at that position, accompanied by a memoir and estimate. The expense is estimated at \$101,000.

The Sheeps-cut.—About thirty-five miles west of the Penobscot is the Sheeps-cut,* a deep and capacious indentation of the coast, on which, fourteen miles from the ocean and near the head of deep water, stands the town of Wiscasset. This town is of considerable importance to the commerce of Maine, and should be fortified; the rather as the works (placed in their proper situation from four to seven miles below the town) will cover a very excellent harbor of refuge for ships-of-war as well as merchantmen. The works heretofore erected, namely, Fort Edgecomb and a battery opposite, are too weak, and are placed too near the town to fulfill their object. The surveys here not being completed, no projects have yet been made by the board.

The Kennebeck river.—This river,* which is one of the largest in the eastern States, enters the sea nearly midway between Cape Cod and the mouth of the St. Croix. It rises near the sources of the Chaudier, a tributary of the St. Lawrence, and may one day serve as a line of operations against Quebec. The situation and extent of this river, the value of its products, and the active commerce of the flourishing town of Bath, lying about twelve miles from the sea, as well as the excellence of the harbor within its mouth, will not permit us to neglect its defence. The surveys, however, as in the case of the Sheeps-cut and Mount Desert island, being in an unfinished state, no projects have as yet been made. The present fort, which is on the west bank near the mouth, is very small, and is commanded by a ridge within pistol shot.

Portland.—A little to the northwest of Cape Elizabeth, and at the mouth of Fire river, is the town of Portland.‡ The protection of the town, of the merchantmen, and of the ships-of-war which may be stationed there to guard the coast, or which may enter for safety—all of them important objects—may be secured, as an inspection of the map of the town and harbor will show, by occupying Fort Preble, Point House island, Hog Island ledge, and Fish Point. At the same time, if the two channels to the north and east of Hog Island ledge can be obstructed at small expense, which is hardly a matter of doubt, although some final surveys are wanting to decide this point, there will be no necessity for a battery on the ledge, and Fish Point need only be occupied by such works as may be thrown up in time of war.

The projects of the board contemplate the preservation of Fort Preble and Fort Scammel, and the erection of new works having proper relations of defence with these.

The expense of the new works is stated in their estimate at \$135,000, not including the defence of Hog Island channel, the mode of which is yet undetermined.

22D CONGRESS.]

No. 540.

[2D SESSION.]

ADDITIONAL ESTIMATE FOR FORTIFICATIONS FOR THE YEAR 1833.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 2, 1833.

DEPARTMENT OF WAR, *December 28, 1832.*

SIR: I have the honor to submit to the consideration of the Committee of Ways and Means the enclosed estimate of General Gratiot, and respectfully request that appropriations may be made accordingly.

I have the honor to be, very respectfully, your obedient servant,

LEWIS CASS.

Hon. G. C. VERPLANCK, *Chairman of the Committee of Ways and Means,
House of Representatives.*

ENGINEER DEPARTMENT, *Washington, December 28, 1832.*

SIR: In conformity with the intention expressed in my last annual report, I have the honor to submit, herewith, an additional estimate of funds required for the public service in this department, and request that it may be laid before Congress should it meet your approbation.

Respectfully, your most obedient servant,

C. GRATIOT.

Hon. LEWIS CASS, *Secretary of War.*

Additional estimate of funds required for the public service in the Engineer department during the year 1833.

For a fort on Throg's Neck, East river, New York.....	\$25,000 00
For rebuilding Fort Delaware, Delaware river.....	50,000 00
For a fort on Foster's bank, Pensacola harbor, Florida.....	25,000 00
For a fort on Grand Terre, Baratavia, Louisiana.....	25,000 00
	125,000 00

REMARKS.

Fort Hamilton, at the Narrows of New York harbor, having been completed, it is proposed to continue the system of defence for that harbor by making arrangements to commence the work projected for Throg's Neck.

On the subject of rebuilding Fort Delaware I refer to the report of the board of engineers, which accompanies my general report of operations during the year 1831.

Much advantage and economy to the public service would result from having the means of collecting materials for the fort projected for Foster's bank, Pensacola harbor, as it would enable the engineer to make arrangements for procuring supplies from the persons already occupied in furnishing them for the work at Santa Rosa point, who will otherwise be compelled to break up their establishments, as the present work will be completed in the ensuing year.

The construction of the fort on Grande Terre will complete (with the exception of repairs to Fort St. Philip) the projected system of defence of Louisiana, and may now be advantageously commenced.

[2D SESSION.]

MEANING OF THE WORDS "ALL MILITARY OFFICERS," AS USED IN THE RESOLVE OF CONGRESS OF MAY 15, 1778.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 23, 1833.

DEPARTMENT OF WAR, *January 22, 1833.*

SIR: In compliance with the resolution of the House of Representatives of the 10th instant, directing the Secretary of War to report to that House "what construction has prevailed with the accounting officers as to the words 'all military officers,' used in the resolve of the 15th of May, 1778, relative to half-pay, and the reasons for such construction; whether they have been deemed to apply to officers of the line only, or have been extended to those of engineers, invalid artificers, Lee's legion, and other distinct and independent corps; whether there was any specific promise of land, or half-pay, either to Lee's legion, the

corps of engineers, or artificers, commanded by Colonel J. Baldwin; what discrimination, if any, was made in the organization of the two last corps; and whether, in both, the promotion of officers was not confined to the corps, respectively; and whether these corps were not component parts of the eighty-eight battalions raised to serve for 'during the war,' under the resolve of the 16th of September, 1776, specifically referred to in the resolve of the 12th of November, 1779; and which of the officers of either corps have obtained land, or half-pay, or commutation of half-pay;" I have the honor to enclose reports of the Third Auditor and the officer in charge of the bounty land bureau, which contain the information required.

I have the honor to be, very respectfully, your obedient servant,

LEWIS CASS.

HON. ANDREW STEVENSON, *Speaker of the House of Representatives.*

TREASURY DEPARTMENT, *Third Auditor's Office, January 18, 1833.*

SIR: The resolution of the House of Representatives of the United States of the 10th instant, and which was referred to me by you on the 11th instant for a report thereon, directs the Secretary of War to report to the House—

1st. What construction has prevailed with the accounting officers as to the words "all military officers," used in the resolve of the 15th of May, 1778, relative to half-pay, and the reasons for such construction.

2d. Whether they have been deemed to apply to officers of the line only, or have been extended to those of the engineers, invalids, artificers, Lee's legion, and other distinct and independent corps.

3d. Whether there was any specific promise of land or half-pay, either to Lee's legion, the corps of engineers, or artificers commanded by Colonel J. Baldwin.

4th. What discrimination, if any, was made in the organization of the two last corps; and whether, in both, the promotion of officers was not confined to the corps, respectively; and,

5th. Whether these corps were not component parts of the eighty-eight battalions raised to serve for "during the war," under the resolve of the 16th of September, 1776, specifically referred to in the resolve of the 12th of November, 1779; and,

6th. Which of the officers of either corps have obtained land or half-pay, or commutation of half-pay.

In relation to the first branch of the resolution I have the honor to furnish a copy of a report made to Congress by the commissioner of army accounts on the 25th of August, 1786, and which embraces the report of a committee of Congress on "the memorials of several officers of the late corps of artificers, praying that, in settling their accounts, they may be allowed the commutation of half-pay, as founded on justice, or on the acts of Congress," and which report contains the best explanation that I have been able to find of the construction that was given by the accounting officers to the words "all military officers," used in the resolve of the 15th of May, 1778, relative to half-pay, as well as the reasons for that construction.

Understanding the second branch of the resolution to have in view the ascertainment whether or not the officers "of the engineers, invalids, artificers, Lee's legion, and other distinct and independent corps," have been allowed half-pay, or commutation in lieu thereof, I have to state that, in accordance with the resolve of the 22d March, 1783, commutation has been allowed to "corps not belonging to the lines of particular States, and who are entitled to half-pay for life," among which were the corps of engineers, of invalids, Lee's legion, and Armand's corps.

In relation to the third branch of the resolution I have to state that, in the resolution of Congress of the 21st of October, 1780, making provision for a new arrangement of the army, "two partisan corps" are provided for, one of which was to be commanded by Colonel Armand, and the other by Major Lee; and, by said resolution, all the officers who should serve to the end of the war were promised half-pay for life, and, of course, half-pay was promised to the officers of said partisan corps. By the resolution of the 14th of November, 1780, "the officers of the engineering department" were "put on an equal establishment with the officers of the line." No promise of half-pay appears to have been made to the officers of the corps of artificers commanded by Colonel Baldwin; on the contrary, they are excluded from the allowance.—(See resolve of 16th November, 1779.)

In relation to the fourth branch of the resolution I have to state that it appears by the resolution of the 11th of March, 1799, the engineers were formed into a corps, and styled the "corps of engineers," and were to "take rank and enjoy the same rights, honors, and privileges with the other troops on the continental establishment;" and that they were to "take rank in their own corps according to the dates of their respective commissions." By the resolve of the 12th of November, 1779, the "eleven companies of artificers raised by the quartermaster general" were to "be reformed, and incorporated and arranged in such manner as the commander-in-chief shall deem proper." By the same resolve the officers, on receiving their commissions, were to have "rank only in their own corps," and "to hold regimental courts-martial in cases that concern their own corps only, and are usually cognizable by regimental courts-martial of the line."

In regard to the fifth branch of the resolution I have to state that I infer from the report of the commissioner of army accounts of the 25th August, 1786, (herewith transmitted,) that the provision in the resolution of the 12th of November, 1779, "that the officers and men of the said corps (artificers) be considered as part of the quotas of the eighty battalions, as apportioned on the several States to which they respectively belong," was not considered, either by the commissioner of army accounts or by Congress, as forming "component parts of the eighty-eight battalions raised to serve for 'during the war,' under the resolve of the 16th of September, 1776," in such a sense as to entitle them (the officers of the corps of artificers) to the grant of half-pay or commutation.

In relation to the sixth and last branch of the resolution I have to state that I cannot find that any officer of the artificers commanded by Colonel Baldwin has obtained "half-pay or commutation of half-pay;" on the contrary, the report of the committee of Congress, embraced in the report of the commissioner of army accounts of the 25th of August, 1786, closes with a resolution that the officers of the "late corps of artificers" were not entitled to it. Officers of engineers have received commutation.

With great respect.

PETER HAGNER, *Auditor.*

HON. LEWIS CASS, *Secretary of War.*

REPORT.

OFFICE OF ARMY ACCOUNTS, *New York, August 25, 1786.*

The commissioner for settling the accounts of the late army of the United States, to whom was referred the petition of A. Baird, requesting the commutation, in lieu of half-pay for life, as a deranged surgeon in Baldwin's corps of artificers, begs leave to report:

That Doctor Baird founds his claim on the resolution of January 17, 1781, granting, generally, the half-pay to the hospital department; and that of May 3, 1782, granting the same, particularly, to a surgeon of artificers.

That Congress did, on the 19th of October last, refer to your commissioner a report made by a committee of Congress on the petition of sundry officers of the late corps of artificers for half-pay or commutation, which report your commissioner was directed to take order on, and is in the following words, viz:

"The committee, consisting of _____, to whom was referred the memorials of several officers of the late corps of artificers, praying that, in settling their accounts, they be allowed the commutation of half-pay, as founded on justice or on the acts of Congress, beg leave to report:

"That the claims of those officers do not appear to be founded on the usage of nations nor in equity. They believe that half-pay has been allowed to military officers partly from a regard to the hardships and personal dangers to which they were exposed, but chiefly from a consideration that, by long continuance in the military line, they may have lost those habits by which they formerly had been enabled to provide for themselves or families; which reasons do not apply so fully to the officers of artificers.

"Your committee are of opinion that their sole rule on this occasion must be the acts of Congress respecting the officers in the corps of artificers; and they do not find any resolution by which they are entitled to half-pay or commutation; on the contrary, they seem to be expressly cut off from any such claim.

"The original act of Congress of May 15, 1778, by which half-pay was promised for seven years, confined the same to *military officers*, which certainly did not include the artificers; and you committee are of opinion that in all subsequent acts which relate to half-pay the same denomination of officers must be intended, unless in cases where other officers are expressly mentioned. Surely the act of October 2, 1780, promising half-pay to officers who might be deranged, never could be construed as giving half-pay to any class of officers who had no claim to half-pay had they continued in service to the end of the war. If any doubt could have arisen whether the artificers were intended in the promise of half-pay, it must be fully removed by the act of the 16th November, 1779; it was then resolved that it be recommended to the several States to allow the corps of artificers established by Congress the 12th instant all the benefits provided for officers and soldiers in the line of their quotas of the continental battalions, except the half-pay. After this pointed and express exclusion of those officers from the allowance of half-pay, your committee are of opinion that nothing but a subsequent promise, equally pointed and express, can give them a title to the same. None such has been made; wherefore they submit the following resolve: That the officers of the late corps of artificers in the service of the United States are not entitled to half-pay or the commutation for half-pay."

Your commissioner, therefore, supposes that he is not warranted to grant the commutation to the memorialist unless he has the direction of Congress.

J. P.

CHARLES THOMSON, Esq., *Secretary of Congress.*DEPARTMENT OF WAR, *Bounty Land Office, January 21, 1833.*

So far as information appears to be required from this office by the resolution of the House of Representatives of the United States of the 10th instant, referred to this office on the 19th instant to report thereon, I have the honor to state, in reference to the inquiries "whether there was any specific promise of land either to Lee's legion, the corps of engineers, or artificers commanded by Colonel J. Baldwin," that the two first named, being *military corps* on the continental establishment, the officers attached thereto were embraced in the several resolves of Congress providing bounty lands for such of them as continued in service to the close of the war.

No returns exist in this office of the names of the officers of the corps of artificers commanded by Colonel J. Baldwin; nor does it appear that land warrants have issued to any of the officers of that corps, except to Samuel A. McCoskey, surgeon, and William McCoskey, surgeon's mate; and these issues appear to have been made in virtue of the resolution of Congress of the 3d May, 1782, as follows: "*Resolved*, That as the dispersed situation of the corps of artificers commanded by Captain Wyley will no longer require the services of Dr. A. McCoskey, and Dr. William McCoskey, his mate, they be considered as reduced and retiring from the service on the 10th instant, and the surgeon be entitled to all the emoluments heretofore allowed to reduced regimental surgeons;" from which it would appear that these officers had been retained in service until the 10th May, 1782, being a period of more than thirteen months after the corps of artificers commanded by Colonel J. Baldwin had been dissolved under the resolution of Congress of the 29th March, 1781, by which resolution it is explicitly declared that "all officers of the regiment of artificers not retained by virtue of these resolutions be no longer considered in the service of the United States." The officers retained by the resolution just referred to were, it is believed, incorporated with the reduced corps of *artillery artificers*, and continued in service, the names of some eighteen or twenty of whom are returned on the records of this office as being entitled to, and as having received, bounty lands from the United States.

The officers of the regiment of *artillery artificers*, being attached to the artillery in the field, were, it is believed, considered *military officers*; hence, those of them who served to the end of the war were embraced in the resolves of Congress providing bounty lands. The duties of the officers of the corps of *artificers* being (as it is believed) confined to the superintendence of workshops, laboratories, &c., and to the control and direction of the artisans attached thereto, and, not being required to act in the field, were not, it is presumed, considered *military officers*. Their names were, therefore, not returned on the list of officers on file in this department among those entitled to land bounties from the United States. Had

they been considered *military* officers, it is presumed that Congress, when, by their resolution of March, 1781, they declared the corps of artificers "dissolved, and no longer in the service of the United States," would at that time have designated them as reduced and supernumerary officers, and, as such, entitled to all the emoluments in land and half-pay. That Congress did not so consider the officers of that corps is manifested by the discrimination made in the cases of the two Doctors McCoskey before referred to. If the surgeon of that name (surgeon's mate not being entitled to half-pay) had been considered, at the time of the dissolution of that corps, (to which he then belonged,) as entitled to "all the emoluments heretofore allowed to regimental surgeons," further legislation in behalf of that officer would have been superfluous.

The records of the War Department, from the earliest period succeeding the war of the revolution, exhibit no grant of bounty land to an officer or private of the corps of artificers, except in the two cases referred to in the foregoing. This fact indicates the construction applied to the resolutions of Congress in reference to that corps by the individual who first presided over the department, who was himself an officer of the highest grade in the army.

I have the honor to be, very respectfully, your obedient servant,

WM. GORDON.

HON. SECRETARY OF WAR.

22D CONGRESS.]

No. 542.

[2D SESSION.]

ON THE NECESSITY AND COST OF REPAIRING FORT MARION, SAN AUGUSTINE, FLORIDA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 24, 1833.

Copy of a letter from a distinguished gentleman of San Augustine to the delegate from Florida.

TALLAHASSEE, January 8, 1833.

SIR: I am sorry it has not been in my power, owing to the pressure of official engagements, to write you before now upon the subject of the public improvements which are necessary and proper at St. Augustine.

No one can see the *castle* or *fort*, as it is called, completed by the Spanish government in 1745, without *admiration* and *regret*. It is allowed, as you know, by military men to have been constructed according to the best principles of fortification, and it long afforded protection to an otherwise almost defenceless position; now going rapidly to ruin, its walls at one or two points are falling into the sea. When it passed into the hands of the United States it was in good repair, and the money expended upon the *barracks* in the same city (formerly an old monastery) might, if appropriated to this important work, not only have preserved a fine and venerable monument of art, but made it a commodious residence for soldiery, and an impregnable fortress. At present it is used as a *jail* and a *magazine*; for the latter it is not well suited, because *neglect* and *time* have rendered the roof and walls in many places pervious to moisture, and besides, *it is near half a mile from the garrison*. Apart from other considerations, *this post would be most important in the event of SERVILE INSURRECTION*, a contingency which, in a slaveholding country, we are always obliged to hold in consideration. If *panic* such as occurred not long ago in Georgia and other southern States should unhappily be spread abroad, either with or without cause, *Fort Marion* in good repair would afford a safe asylum to women and children; indeed, it would impart a sense of strength and security to all East Florida. If the work be worthy of repair, as it seems to me it certainly is, every day's delay will but increase the labor and expense of repairing; what *is* to be done should speedily be accomplished, for the time has come when a general dilapidation can only be checked by a strong and prompt effort. It may be added that the preservation of this great work (which cost so much originally that, when the accounts were presented to the Spanish King, he asked if the walls were made of *silver*) is perhaps due to the *feelings* of the community, of which it was once the pride and boast. There is no native inhabitant who speaks of its present ruinous condition without contrasting it with the favor and attention bestowed formerly upon it by the Spanish government, and expressing a lively regret *at the change*. If this castle were again devoted to military purposes, and the present barracks (which I do not venture to hope for, and scarcely persuade myself to suggest) converted *into a public seminary*, the advantages accruing to St. Augustine would be very great. That city has now to depend for its prosperity upon the *salubrity* of its climate, which invites those who wish for and prize health to reside there, and *fits it in a peculiar manner for a seat of learning*.

In former times there was a *sea-wall* running along the water's edge from the castle to the southern extremity of the city, protecting the inhabitants and their property from the encroachments of the waters, which, driven by the tides and winds, often threatened both. A part of this wall has been removed by the United States, for the purpose of making a wharf opposite to the barracks; and this breach, and others occasioned by the constant action of the sea, expose the city to gradual, but certain and great injury. Since I have been in St. Augustine the sea has made its way to the doors of several houses, literally *imprisoning* the inhabitants, and dashing the spray into the very windows. Unless arrested by a permanent wall, such as the Spaniards erected, there will at some time or other, and perhaps at no distant period, be a loss of life and property particularly distressing to the government, because a considerable portion of the wall standing at the change of flags was removed by its agents.

I am not able to speak with anything like accuracy of the amount necessary for these repairs; it would doubtless be considerable; but could the members of Congress be transported to the spot, ample

appropriations would not be for a moment withheld. I have imparted not my own opinions only, but those of the inhabitants of East Florida, of every intelligent stranger with whom I have conversed, and of several gentlemen of the army; all agree that the sea-wall should be thoroughly repaired, and so should Fort Marion, even though the present barracks continue to be appropriated, as now, to the use of the military. *Feeling and safety* alike demand these improvements.

FORT MARION, *St. Augustine, Florida, January 9, 1833.*

SIR: I have been requested by Judge R. R. Reed, and a number of gentlemen of the city of St. Augustine and its vicinity, to send you the enclosed estimate of the amount and cost of the materials required to repair Fort Marion and the tide-wall for the protection of the city of St. Augustine, which I hope will be of some service to you in obtaining an appropriation for so desirable an object.

I am, sir, very respectfully, your obedient servant,

G. S. DRANE, *Captain 2d Artillery.*

Hon. J. L. WHITE, *Delegate from Florida, Washington City, D. C.*

Estimate of the quantity, kind, and cost of the building materials delivered at St. Augustine, necessary for the repairs of Fort Marion and the tide-wall, for the protection of the city of St. Augustine, East Florida.

One thousand and two hundred squares of stone, at \$8 per square.....	\$9, 600 00
Six thousand bushels shell lime, at 12½ cents per bushel.....	750 00
Sixteen thousand bushels sand, at 3 cents per bushel.....	300 00
Ten thousand feet 1½-inch plank, at \$20 per thousand.....	2, 000 00
Ten thousand feet scantling, at \$18 per thousand.....	1, 800 00
Five thousand feet 1¼-inch plank, at \$20 per thousand.....	1, 000 00
Fifteen thousand brick, at \$16 per thousand.....	2, 430 00
Two large flatboats.....	450 00
Contingent expenses.....	800 00
	19, 130 00

NOTE.—Mechanics can be employed from \$1 50 to \$2 per day, and laborers at \$12 per month.

Extracts from the presentments of the grand jury returned at the November term, 1832, of the superior court for East Florida, copied and certified to the honorable the delegate from this Territory in the Congress of the United States, by order of the court.

Finally, the grand jury would press the particular attention of the delegate in Congress to a few facts, that he may be the better enabled to aid the inhabitants of this section of the country to provide for their present and immediate welfare.

They consider the jail wholly unfit for its purposes, it being damp, unsafe, and incommodious.

They repeat the call for an appropriation to cut the United States mail route as far as Palatea.

They would suggest that the government be informed of the necessity of reclosing the public trench in the northern part of the city, the several ponds adjacent, and, in particular, one a little distant from dragon barrack lot, so that they may redound to the health and comfort of the inhabitants.

The roads from Jacksonville to St. Augustine, and thence to Tomoka, are in a bad condition, being almost impassable from fallen trees, and otherwise rendered dangerous from broken and decayed bridges.

A canal from Halifax river to Matanzas is every day more needed and looked for; and, in the opinion of the grand jury, the facilities for its accomplishment can be only equalled by its necessity. The canals from the North river to Pable creek, and from Six Mile creek to the St. Sebastian, as lately surveyed, are well worthy of consideration.

The want of a sea-wall to protect the city of St. Augustine is coming to be painfully felt; the inhabitants, with their little means, are wholly incapable of arresting the progress of the waters; so that, without some aid, they have cause to fear, at no distant period of time, a melancholy loss of property and life.

The grand jury recommend a bill to be submitted to the general government on the national importance of putting a few repairs on the fort at St. Augustine. It is impossible that any true Floridian can behold the present state of that model of fortification without regret, when even the stranger looks but to admire and sympathize in its decay. The watch-towers of Fort Marion are broken, every day brings the fissures of its terraces more asunder; its outworks are leaning and tottering to the sea, while the night-bird as she sits in the cranny of its ruins, alone seems happy in the desolation.

A true copy.

Attest:

GEORGE HIBBS, *Clerk.*

Per B. GIBBS, *Deputy Clerk.*

22^D CONGRESS.]

No. 543.

[2^D SESSION.]

ARMY REGISTER FOR 1833.

COMMUNICATED TO THE SENATE JANUARY 28, 1833.

DEPARTMENT OF WAR, *January 26, 1833.*

SIR: I have the honor to transmit fifty copies of the Army Register for 1833 for the use of the members of the Senate of the United States.

Very respectfully, I have the honor to be, your obedient servant,

LEWIS CASS.

HON. HUGH L. WHITE, *President of the Senate of the United States.*

Register of the army of the United States for the year 1833.

The western department comprises all west of a line drawn from the southernmost point of East Florida to the northwest extremity of Lake Superior, taking in the whole of Tennessee and Kentucky; and the eastern department all east of such line, including Fort Winnebago.

The headquarters of the general-in-chief are in the District of Columbia; the headquarters of the western department are at Memphis, Tennessee; the headquarters of the eastern department are in the city of New York. Those officers whose stations are changed by transfers and promotions will report for duty accordingly.

By order:

R. JONES, Adjutant General.

22d CONGRESS.]

No. 544.

[2D SESSION.]

ANNUAL RETURNS OF THE MILITIA OF THE UNITED STATES FOR 1832.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 6, 1833.

DEPARTMENT OF WAR, February 5, 1833.

SIR: I have the honor to transmit reports from the office of the Adjutant General of the militia force of the United States, and of their arms, &c., required to be laid before Congress by the act of March 2, 1803, "to provide for the national defence by establishing a uniform militia."

Very respectfully, I am, sir, your obedient servant,

LEWIS CASS.

Hon. ANDREW STEVENSON, Speaker of the House of Representatives.

Abstract of the general annual returns of the militia of the United States, &c —Continued.

States and Territories.	Returns.		Artillery.						Rifemen.						Aggregate.	Remarks.
	For what year re- ceived.	Date.	Commission'd officers.	Non-commission'd off- cers, musicians, and privates.	Total.	Number of divisions.	Number of brigades.	Number of regiments.	Number of battalions.	Number of companies.	Commission'd officers.	Non-commission'd off- cers, musicians, and privates.	Total.			
Maine.....	1832	Dec. 25.....	114	1,653	1,767	25	71	1,109	1,970	40,906	* One company of cavalry and six companies of infantry not included; no returns have been made. ² Three companies of cavalry and one company of artillery, amounting to 731, included in the aggregate.

[22d CONGRESS.]

No. 545.

[2d SESSION.]

ON THE EXPEDIENCY OF COMPLETING THE MILITARY ROAD FROM HOULTON TO MARS HILL, IN MAINE.

COMMUNICATED TO THE SENATE FEBRUARY 7, 1833.

The Committee on Military Affairs, to whom was referred the memorial of sundry inhabitants of Houlton, in Maine, praying that an appropriation be made for completing the military road from that place to Mars Hill, in said State, reported:

That the said memorial having been submitted to the consideration of the honorable the Secretary of War, and having received the expression of his opinion that the extension of the said road under present circumstances is unnecessary, the committee are of opinion that the prayer of the memorialists ought not to be granted, and recommend accordingly.

[22d CONGRESS.]

No. 546.

[2d SESSION.]

ORDERS GIVEN TO THE MILITARY AND NAVAL COMMANDERS OF THE UNITED STATES AT CHARLESTON, SOUTH CAROLINA, IN 1832-'33.

COMMUNICATED TO THE SENATE FEBRUARY 12, 1833.

To the Senate:

In compliance with the resolution of the Senate requesting the President of the United States to lay before it "copies of the orders which have been given to the commanding officers of the military forces assembled in and near to the city of Charleston, South Carolina; and also copies of the orders which have been given to the commander of the naval forces assembled in the harbor of Charleston, particularly such orders, if any such have been given, to resist the constituted authorities of the State of South Carolina within the limits of said State," I transmit herewith papers numbered from one to seventeen inclusive, embracing the orders which have been given to the commanding officers of the land and naval forces assembled in and near the city of Charleston, and within the limits of the State of South Carolina, and which relate to the military operations in that quarter. No order has at any time been given in any manner inconsistent therewith. There is a part, however, of the letter of the Secretary of War, dated December 3, 1832, omitted, which, being conditional in its character, and not relating to the operation of the troops, it is deemed improper, in the present state of the service, to communicate.

No order has been at any time given "to resist the constituted authorities of the State of South Carolina within the chartered limits of said State."

ANDREW JACKSON.

WASHINGTON, *February 12, 1833.*

No. 1.

[Confidential.]

NAVY DEPARTMENT, *December 12, 1832.*

SIR: The Experiment and Natchez will both sail soon as practicable, and touch at the port of Charleston, South Carolina.

You can take passage in either to your station, and will, when necessary, after perusing the instructions given to their commanders, issue any orders to either, within the tenor of those instructions, which your skill and experience may deem necessary.

I wish you, before they sail, to give every caution and advice to them as to their passage at this inclement season, and to see that they have on board suitable charts, chronometers, &c., for the voyage.

You are requested to furnish me with a particular report from time to time of all your proceedings while commander of the station at Charleston, South Carolina.

I am, respectfully, sir, your obedient servant,

LEVI WOODBURY.

Com. JESSE D. ELLIOTT, (*Commanding Naval Station, Charleston, S. C., at Norfolk, Virginia.*)

No. 2.

[Confidential.]

NAVY DEPARTMENT, *December 12, 1832.*

SIR: You are directed, whenever ready again for sea, to proceed to the port of Charleston, South Carolina, and carry out, as passenger there, Commodore Jesse D. Elliott, the commander of that station.

You will remain there till further orders from the department, taking special care to give to all our citizens and navigation in that neighborhood all needful aid and protection in their accustomed and lawful pursuits.

In the present inflamed condition of the public mind in a portion of the community there, you will use scrupulous caution to give no just occasion for offence, and will enjoin on your officers and crew the utmost moderation and forbearance in their deportment, consistent with their duty to the laws and Constitution.

Your acts will be confined entirely to the defensive—giving relief to those in distress and to those under attacks from illegal force; and will exercise the greatest vigilance to co-operate with the commander of the forts in that neighborhood in defending the public works and public property from aggression, injury, or capture, by any violent and illegal assaults from any quarter whatever.

You will consult and obey the commander at that station in any exigency, and should another vessel of war of the United States touch at the same port while you remain there, you can extend your cruise to the port of Savannah, and it is hoped a cordial union will exist in all your proceedings.

I am, respectfully, sir, your obedient servant,

LEVI WOODBURY.

Lieut. WILLIAM MERVINE, *Commanding U. S. Schooner Experiment, Norfolk, Virginia.*

No. 3.

[Confidential]

NAVY DEPARTMENT, *December 19, 1832.*

SIR: You are directed, as soon as the Natchez shall be ready for sea, to proceed to the port of Charleston, South Carolina, and carry with you as passenger from Norfolk, should he be there and request it, Commodore Jesse D. Elliott, the commander of the Charleston station. After reaching Charleston you will remain there until further orders from this department, taking especial care to give to all our citizens and navigation in that neighborhood all needful aid and protection in their accustomed and lawful pursuits.

In the present excited state of feeling of a portion of the community there, you will use scrupulous caution to give no just occasion for offence, and will enjoin on your officers and men the utmost moderation and forbearance in their deportment, consistent with the fulfilment of their duty to the Constitution and laws.

Your acts are to be confined entirely to the defensive—giving relief to those in distress and to those under attacks from illegal force, and vigilantly co-operating with the commanders of the forts in that neighborhood in defending the public works and public property from aggression, injury, or capture, by any violent and illegal assaults from any quarter whatever.

You will consult and obey the commander of that station in any exigency, and it is hoped a cordial union will exist in all your proceedings.

I am, respectfully, sir, your obedient servant,

LEVI WOODBURY.

NAVY DEPARTMENT, *December 24, 1832.*

SIR: Among the duties intrusted to you while on the Atlantic coast the present winter is that of seeking, by every judicious means, the safety of our coasting navigation and vessels coming home from abroad at this inclement season.

After arriving at Charleston, and making it your station till other orders, you will occasionally, after storms and inclement weather, cruise at some distance up and down the coast, and, if finding any vessels in distress, yield them all practicable aid.

I am, respectfully, sir, your obedient servant,

LEVI WOODBURY.

Lieutenant WILL. MERVINE, *Commanding U. S. Schooner Experiment, Norfolk, Virginia.*

No. 6.

HEADQUARTERS OF THE ARMY, *Washington, October 29, 1832.*

SIR: From the information which has been received by the Executive, it is deemed necessary that the officers in the harbor of Charleston should be advised of the possibility of attempts being made to surprise, seize, and occupy the forts committed to them. You are therefore especially charged to use your utmost vigilance in counteracting any such attempts. You will call personally on the commanders of Castle Pinckney and Fort Moultrie, and instruct them to be vigilant to prevent surprise, in the night or by day, on the part of any set of people whatever who may approach the forts with a view to seize and occupy them. You will warn the said officers that such an attempt is apprehended, and that they will be held responsible for the defence, to the last extremity, of the forts and garrisons under their respective commands against any assault, and also against every intrigue and surprise.

The attempt to surprise the forts and garrisons, it is expected, will be made by the militia, and it must be guarded against by constant vigilance and repelled at every hazard.

These instructions you will be careful not to show to any persons other than the commanding officers of Castle Pinckney and Fort Moultrie. They are to be considered by you and them as strictly confidential, and will govern you and them as commanders in the harbor.

I am, sir, respectfully, yours,

A. MACOMB, *Major General Commanding.*

Brevet Major J. F. HEILEMAN, *Commanding the troops of the United States in Charleston, and in the harbor of Charleston, South Carolina.*

No. 7.

ADJUTANT GENERAL'S OFFICE, *Washington, November 6, 1832.*

SIR: The general-in-chief directs that you order Captain Ripley, with his company (B) of the fourth regiment of artillery, to proceed forthwith to Fort Moultrie, in the harbor of Charleston, South Carolina, with further orders to report his arrival at that post to the commanding officer of the troops on the Charleston station.

I am, sir, very respectfully, your obedient servant,

R. JONES, *Adjutant General.*

Brevet Colonel EUSTIS, *Fourth Artillery, Commanding Fort Monroe, Virginia.*

No. 8.

ADJUTANT GENERAL'S OFFICE, *Washington, November 7, 1832.*

SIR: The general-in-chief directs that you order company C, of the first regiment of artillery, to proceed forthwith to Fort Moultrie, in the harbor of Charleston, with orders to report to the commanding officers of that post and station.

I am, sir, very respectfully, your obedient servant,

R. JONES, *Adjutant General.*

Brevet Colonel EUSTIS, *Commanding Fort Monroe, Virginia.*

No. 9.

HEADQUARTERS, *Washington, November 12, 1832.*

SIR: I have this day received your letter of the 5th instant. By this time it is expected that the barrette carriages for Castle Pinckney have arrived. I was surprised to find that they had not been shipped many months ago, as they were ordered at the same time with the other equipments.

In reply to your inquiry, how you are to act in case the authorities of South Carolina should demand possession of the citadel and the arms belonging to the State, I have to state that you will, on such demand, evacuate the citadel, and deliver to the proper authority the arms, taking, of course, receipts for the property, as is usual. And should the cholera press on you, you are authorized to retire with your company to Sullivan's island or Castle Pinckney, as you may deem best. But in the latter case you will write a letter to the intendant of the city, informing him of your intention; and as it has been intimated to you that the citadel and the arms belonging to the State will be demanded of you, that you are desirous of turning them and all other property in your charge over to the proper authorities, that you will do so on the demand of such authorities, and retire from the city. You will, however, take care to secure all the property belonging to the United States that may be of use or valuable, and cause it to be transferred to Castle Pinckney or Fort Moultrie, or both, according to your judgment will be most proper. Be careful to do everything in writing, in the way of communication with the authorities with whom you may act; be courteous and decided, avoiding all committal on your part as to hostility, but defend yourself, if attacked, in conformity with the instructions you have received.

I have the honor to be, sir, your obedient servant,

ALEX. MACOMB, *Major General, Commanding.*

Brevet Major HEILEMAN, *Commanding in Charleston, &c., &c.*

No. 10.

[Confidential.]

WASHINGTON, November 18, 1832.

Sir: The state of affairs in South Carolina has occasioned much solicitude to the President. He indulges the hope that the intelligence and patriotism of the citizens will prevent any infraction of the Constitution and laws of the general government. But, while he anxiously looks for this result, he deems it possible, from the information he has received, that, in the first effervescence of feeling, some rash attempt may be made by individuals to take possession of the forts of the United States in the harbor of Charleston. The possibility of such a measure furnishes a sufficient reason for guarding against it, and the President is therefore anxious that the situation and means of defence of these fortifications should be inspected by an officer of experience, who could also estimate and provide for any dangers to which they may be exposed. He has full confidence in your judgment and discretion, and it is his wish that you repair immediately to Charleston, and examine everything connected with the fortifications. You are at liberty to take such measures, either by strengthening these defences or by re-inforcing these garrisons with troops drawn from any other posts, as you may think prudent and a just precaution require.

Your duty will be one of great importance and of great delicacy. You will consult fully and freely with the collector of the port of Charleston and with the district attorney of South Carolina; and you will take no step, except what relates to the immediate defence and security of the posts, without their concurrence. The execution of the laws will be enforced through the civil authority, and by the mode pointed out by the acts of Congress. Should, unfortunately, a crisis arise, when the ordinary power in the hands of the civil officers shall not be sufficient for this purpose, the President will determine the course to be taken and the measures to be adopted. Till, therefore, you are otherwise instructed, you will act in obedience to the legal requisitions of the proper civil officers of the United States.

I will thank you to communicate to me freely and confidentially upon every topic upon which you may deem it important for the government to receive information.

Very respectfully, your obedient servant,

LEWIS CASS.

Major General Scott, *Commanding Eastern Department, Washington.*

No. 11.

[Confidential.]

DEPARTMENT OF WAR, December 3, 1832.

Sir: Your letter of the 27th ultimo has been received and laid before the President. He is pleased at the discretion and judgment manifested by you.

The course of the government will be regulated by the principles stated in the personal interview I had with you. I cannot but hope that the good sense and patriotism of the citizens of South Carolina will still prevent the occurrence of those consequences which must result from the attempt to enforce the ordinance recently passed by the convention of that State. In any event the President will perform his duty, and only his duty, under the Constitution and laws of the United States.

Your position will, for the present, be a proper one at Savannah. But of this you will judge, advising the department of your movements, and communicating all the information in your possession which can be useful to the government in the present extraordinary conjuncture of affairs.

You will please to take care that the defences of the forts in the harbor of Charleston be finished as rapidly as possible, and that every necessary step is taken for their security.

Such instructions as your position may require, and as the course of events may call for, will be communicated to you from time to time.

Very respectfully, your obedient servant,

LEWIS CASS.

Major General Scott, *United States Army, Savannah, Georgia.*

No. 12.

ORDER No. 109.] HEADQUARTERS OF THE ARMY, *Adjutant General's Office, Washington, Dec. 4, 1832.*

Companies B and E of the 3d regiment of artillery, and companies C and G of the 4th regiment of artillery, now at Fort Monroe, will forthwith proceed by sea to Fort Moultrie, in the harbor of Charleston, South Carolina, and report for duty. Should these companies not be full, they will be completed from the companies remaining at Fort Monroe.

Lieutenant Colonel Bankhead, of the 3d regiment of artillery, will repair to Charleston, South Carolina, and take the command of the troops in that harbor.

Major Bender, quartermaster, will repair without delay to Charleston, South Carolina, for duty at that station.

By order of Major General Macomb.

S. COOPER, *Assistant Adjutant General.*

No. 13.

ADJUTANT GENERAL'S OFFICE, *Washington, December 7, 1832.*

SIR: The general-in-chief directs that you order company G, of the 1st regiment of artillery, to proceed with the four companies destined for Fort Moultrie, South Carolina; and that you cause to be sent with the troops four twenty-four-pounder howitzers, four twelve-pounder field pieces, and eight six-pounders, with their equipments complete, together with fifty rounds of ammunition per gun.

I have the honor to be, sir, your obedient servant,

S. COOPER, *Assistant Adjutant General.*

COMMANDING OFFICER, *Fort Monroe, Virginia.*

No. 14.

HEADQUARTERS OF THE ARMY, *Washington, January 24, 1833.*

SIR: From the conversations I have had with the President and Secretary of War, it is expected that you will be in Charleston harbor by the end of the month. You will, therefore, avail yourself of the earliest opportunity to proceed to that position, and resume the direction of the military department.

I have the honor to be, sir, yours, very respectfully,

A. MACOMB.

Major General WINFIELD SCOTT, *Commanding Eastern Department.*

No. 15.

HEADQUARTERS OF THE ARMY, *Washington, January 25, 1833.*

SIR: You will receive at Fort Moultrie or Castle Pinckney the collector and such officers of the customs as he may have occasion to employ and take with him; and you will allow him to remain at and establish the custom-house within the post, and afford him all facilities and also protection for that purpose, and in taking and receiving the entries of vessels and their cargoes, and in performing the other duties necessary by law to be performed at the custom-house; and further, you will receive, previously to the removal of the custom-house, and whenever the collector may desire it, such of his private property and effects, and also such foreign goods, wares, and merchandise, as he may find it necessary to send for that purpose for safe-keeping, and hold the same under his direction and subject to his orders only.

I am, sir, very respectfully, your obedient servant,

ALEX. MACOMB, *Major General, Commanding the Army.*

Lieutenant Colonel JAMES BANKHEAD,

Commanding the troops of the United States in the harbor of Charleston, S. C.

No. 16.

ADJUTANT GENERAL'S OFFICE, *Washington, January 26, 1833.*

SIR: As it is probable that the Rules and Articles of War have not been subscribed by many of the officers under your command, the general-in-chief directs you will, on the receipt of this, require all the officers in the harbor of Charleston to comply with the first article of the first section of the act for establishing rules and articles for the government of the armies of the United States, for which purpose I herewith send the Rules and Articles of War to receive the signatures of all the officers, including your own, which, when completed, you will transmit to the office of the Adjutant General. Should any object to sign the Articles of War, as required by law, you will report their names accordingly.

I am, sir, respectfully,

R. JONES, *Adjutant General.*

Colonel JAMES BANKHEAD, *Commanding Charleston harbor.*

No. 17.

[Confidential.]

DEPARTMENT OF WAR, *January 26, 1833.*

SIR: I have received your letter of the 23d instant, and am directed by the President to communicate to you his wish that you repair to Charleston with the least possible delay and assume the command of the troops in that quarter, under the views and instructions heretofore communicated to you. This intimation would have been given before, but I supposed it was your intention to return, and therefore felt unwilling, by any expression of my expectation, to hasten it at the expense perhaps of inconvenience to yourself.

An express has been established between here and Charleston, and will be continued as long as the state of things there may permit and require it. Should, however, any circumstance delay or prevent it, you are at full liberty, whenever you think the public interest requires it, to make other arrangements

for the conveyance of your despatches. You can employ pilot boats, as you suggest, when these are necessary.

I did not know till yesterday that _____ was ordered to Savannah. Your course respecting that officer was equally firm and discreet, and met my entire approbation. I have directed he should be immediately relieved and withdrawn from that quarter.

All your despatches have been communicated to the President, and your general views and proceedings have been approved by him. The three orders to which you especially refer I shall briefly advert to.

It is the most earnest wish of the President that the present unhappy difficulties in South Carolina should be terminated without any forcible collision; and it is his determination that if such collision does occur it shall not be justly imputable to the United States. He is therefore desirous that in all your proceedings, while you execute your duty firmly, you act with as much discretion and moderation as possible; and this course he has never doubted but you will adopt.

Self-defence is a right belonging as much to military bodies as to individuals; and officers commanding separate posts are responsible at all times for their defence, and are bound to use due precaution to avoid danger. If a body of armed men approach Sullivan's island with apparently hostile views it will be proper to pursue the course indicated by you to Colonel Bankhead; that is, to warn their commanding officer to retire, and to inform him of the course which you will be compelled to adopt in the event of his continued approach. Should this warning be useless, and the armed body attempt to land, you will be justified in resisting such attempt. But before this unfortunate alternative is resorted to I rely upon your patriotism and discretion to endeavor, by all reasonable and peaceable means, to induce any such armed body to abandon their enterprise. The subject is committed to you in the full conviction that while you discharge your duty as an officer you will be mindful of the great delicacy of the subject, and of the anxiety of the President to avoid, if possible, a resort to force. But whatever the just rights of self-defence require must be done, should a case occur involving such a question.

Your order to Colonel Twiggs was right in the event of his being compelled to abandon his post. But before the receipt of your letter, while we were here in much anxiety about the arsenal at Augusta, and had not learned the prudent measures taken by you for its defence, Colonel Twiggs was directed to defend himself if attacked to the last extremity. In such a case an officer must reject all other considerations and maintain his position as long as he has the means of resistance. It would certainly be better to destroy the arms and ammunition in the arsenal than they should fall into the hands of any assailants. But that is a result I do not suffer myself to anticipate while so valuable an officer as Colonel Twiggs is in command and is supported by an adequate garrison.

The course you have directed respecting those officers, if any there may be, who hesitate in their allegiance to their country in the hour of trial and peril meets the entire approbation of the President. I flatter myself that none such will be found; but if there are they should be immediately known, when their cases will become the subject of special consideration. When I received your letter respecting _____ and _____ I directed General Macomb to order Colonel Bankhead to call upon all the officers under him who had not already done it to take the oath of allegiance, and to sign the Rules and Articles of War.

Since writing the above paragraph I learn, on inquiry, that the directions I gave respecting the oath of allegiance were omitted to be carried into effect. I have renewed the order. I will thank you to report any facts which may come to your knowledge tending to show that upon the great question of duty any officer has embraced views which would probably unfit him for the performance of any trust which might be reposed in him; and you are at liberty to order from South Carolina or its borders any such officer.

It has been represented that the martello tower on James island, and the fort at the mouth of Stone inlet, might be important positions for you to occupy. Please to examine these points and take such measures on the subject as you may deem necessary.

Very respectfully, your obedient servant,

LEWIS CASS.

Major General Scott, *United States Army, New York.*

ON CLAIM BY AN OFFICER OF THE ARMY FOR COMPENSATION FOR A HOUSE ERECTED
AT FORT JESUP, LOUISIANA, AND USED AS QUARTERS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 19, 1833.

Mr. R. M. JOHNSON, from the Committee on Military Affairs, to whom was referred the petition of Lieutenant A. H. Morton, reported:

That they have called upon the War Department for the facts of the case, and having received a communication on the subject of the claim, the committee do not believe that it is either just or expedient to make provision for such claims. The committee refer to documents marked A and B and make them a part of this report.

Resolved, That the prayer of the petitioner is unreasonable and ought not to be granted.

A.

DEPARTMENT OF WAR, *February 14, 1833.*

SIR: I have the honor to transmit a report from the quartermaster general, made in pursuance to your letter received on the 6th instant.

From the facts of this case, as they appear by the report of the quartermaster general, and particularly that a part of the materials was public property, and that a part if not the whole of the labor was performed by the troops, it appears to me inexpedient to grant the relief asked for. No authority is shown for the erection of this house upon the public ground, nor for the employment of the public property and labor in its construction, and I think the precedent would be a bad one were provision made for the payment required. If buildings are wanted for the public service there is a prescribed mode in which they can be procured; but certainly encouragement should not be given to their voluntary construction, and the mingling together, as in this case, of public and private property.

Very respectfully, I have the honor to be, your obedient servant,

LEW. CASS.

Hon. R. M. JOHNSON, *Chairman Committee on Military Affairs, Ho. of Reps.*

B.

QUARTERMASTER GENERAL'S OFFICE, *Washington City, February 9, 1833.*

SIR: In reply to the letter of the honorable Chairman of the Committee on Military Affairs of the House of Representatives, referred to this office on the 6th instant, with a petition of Lieutenant A. H. Morton, asking payment or rent for a house said to have been erected by him at the post of Fort Jesup, Louisiana, I have the honor to state:

1st. That the building referred to is found to be convenient and useful, and is perhaps necessary to the troops composing the present increased garrison

2d. The house is on the public property and is said to be contiguous to other public buildings.

3d. The house was valued, in 1831, at \$250, (see paper marked *a*;) but as it is known that a part of the materials used belonged to the public, and that a part, if not the whole, of the labor was performed by Lieutenant Morton.

4th. The Secretary of War has unquestionably the right to cause the house to be purchased or payment to be made for the amount expended in erecting it. Application was made in January, 1832, by the quartermaster at the post for authority to pay for that as well as certain buildings erected by others. Paper marked (*b*) contains the decision in the case of Lieutenant Morton. It may be proper here to remark that it is the duty of the Quartermaster's department to furnish quarters for the troops, but no permanent barracks can be erected but by order of the Secretary of War. If the building was temporary, and from the appraisement it would seem to be so, it was the duty of the quartermaster to erect it, provided the public service required it; but neither the commanding officer nor any other individual had a right to authorize the erection of private buildings upon the public property. I return the papers in the case, and I am, sir, respectfully, your obedient servant,

TH. S. JESUP, *Quartermaster General.*

Hon. LEWIS CASS, *Secretary of War, Washington City.*

(a.)—Extract.

We, the undersigned, Lewis Latham and Henry Stoker, citizens of the parish of Natchitoches, Louisiana, being chosen referees to value certain property, the former by Lieutenant Francis Lee, assistant quartermaster, on the part of the United States, the latter by the owners of the property to be valued; said property being certain improvements of houses built on public lands, within the immediate vicinity of Cantonment Jesup, Louisiana, and, in fact, forming a part of said garrison, value the same as follows: A dwelling-house, with out-houses, the property of Lieutenant A. H. Morton, 7th regiment of infantry, and now occupied by Brevet Major Green, 3d infantry, and his family as quarters, \$250.

LEWIS LATHAM.
HENRY STOKER

CANTONMENT JESUP, *December 14, 1831.*

*(b.)—Extract.*QUARTERMASTER GENERAL'S OFFICE, *March 8, 1832.*

SIR: Payment for houses erected by officers cannot be made unless they show that they had the authority of the War Department to erect them.

I am, sir, &c.,

THO. S. JESUP, *Quartermaster General.*

Lieutenant FRANCIS LEE, *Assistant Quartermaster, Fort Jesup, Louisiana.*

22D CONGRESS.]

No. 548.

[2D SESSION.]

ON CLAIM OF MAJOR GENERAL ALEXANDER MACOMB TO THE PAY AND EMOLUMENTS
CORRESPONDING WITH HIS BREVET RANK.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 25, 1833.

Mr. WHITLESEY, from the Committee on Claims, to whom was committed a bill reported by the Committee on Military Affairs, for the relief of Alexander Macomb, with the report made by said committee, and the accompanying papers, reported:

The petitioner seeks to be released and discharged from his liability on a bond given to the United States by Samuel Champlin, on the 28th day of May, 1811, in the sum of ten thousand dollars, with J. Roddy, R. C. Jennings, and the said Alexander Macomb, as his sureties, with the condition that the said Samuel Champlin should well and truly execute and faithfully discharge his duties as paymaster, and regularly account, when thereto required, for all moneys received by him from time to time, with such person or persons as should be duly authorized and qualified for that purpose, and if the condition was performed the said bond was to be void and of no effect, otherwise to remain in full force and virtue. The condition of the bond has been broken, and a judgment has been recovered against the administrator of J. Roddy, and a suit is now pending before the court in this district against General Macomb.

The petitioner thinks he is entitled to relief from the following considerations:

1st. That Samuel Champlin was appointed deputy quartermaster general in the month of March, 1813, and acted in that capacity during the war, and until 1815, whereby he was led to conclude that his principal was not a defaulter as paymaster.

2d. That the petitioner being then continually engaged in the public service, during a most eventful period, and in distant scenes, made no inquiry as to the accounts of said officer, or his liability as his security.

3d. That he believes the large balance in the hands of Samuel Champlin, as paymaster, at the time he was promoted to the office of deputy quartermaster general, was expended under his new appointment, and is now claimed of him.

The petitioner sets up a claim against the United States for his pay and emoluments, by virtue of his brevet rank, which he is willing should be set off against any demand they have against him.

These claims should be examined separately, for if the liability of General Macomb has been cancelled by any act of the United States, and he has a just and equitable demand against the United States, he is entitled to it, and no fictitious claim should be interposed to prevent him from obtaining what is due to him.

It will be necessary to investigate the facts, and see how far they comport with the statement made by the petitioner, on which he relies for his discharge, and when the facts are ascertained apply to them the principles of law applicable in such cases, and then abide by the result, whether it shall be in favor of or against the claimant.

The committee addressed a letter to the Secretary of the Treasury on the 21st of January, requesting him, among other things, to inform the committee—

1st. The date of the appointment of Mr. Champlin as deputy quartermaster general.

2d. To furnish the committee with a copy of the different advancements of money made to Samuel Champlin as district paymaster.

3d. To be informed whether two accounts were opened with him on the books of the treasury, one as paymaster, from the date of his appointment until the resignation of that office, or until he was transferred to the quartermaster's department, and the other as quartermaster after said transfer.

4th. The reason why Mr. Champlin's account as paymaster was not settled before 1819.

So much of the communication as embraced the foregoing inquiries was referred to the Third Auditor for his report, which was made on the 24th of January last, and sent by the Secretary of the Treasury to the committee, and to which reference is made as a part of this report.

1st. In answer to the first inquiry it appears that Mr. Champlin was appointed by General Pinckney deputy quartermaster general on the 9th of July, 1812, and that his regular appointment in that office took place on the 18th of March, 1813, and that he continued to disburse in that department from the time of his first appointment to the time of his regular appointment, and subsequently to the end of his service. He resigned his office of paymaster on the 31st of May, 1813, being about two months and an half from the date of his regular appointment as quartermaster general.

2d. It appears from the answer to the second inquiry, accompanied by a copy of the account of money advanced to Mr. Champlin, that he received for the pay department \$387,259 98, and that he disbursed \$331,332 78, leaving due from him \$55,927 20.

3d. Two accounts were kept at the treasury, in one of which was debited the money advanced on his estimates or drafts, as paymaster; and in the other the money advanced on his estimates or drafts, as deputy quartermaster general, and the credits were carried to the appropriate accounts.

4th. In answer to the fourth inquiry, which, from the statement in the petition, presupposed the accounts of Mr. Champlin as paymaster were not settled before 1819, it is stated that "Major Champlin received his advances of money from the paymaster general, to whom it was his duty regularly to render his accounts and vouchers. It is now ascertained from the office of the paymaster general that this was not done, although repeatedly called on, until near the end of the second quarter of the year 1814. The vouchers he then rendered were turned over by the paymaster general to the accountant of the War Department, and a settlement thereof made on the 22d of November, 1814, resulting in a balance due to the United States of \$70,727 50, of which Major Champlin was advised, and a statement explanatory of the settlement sent him, that he might explain, or produce vouchers to remove objections to any item not allowed to his credit." Major Champlin was a defaulter as deputy quartermaster general, and was requested to settle this account. The act of May, 1816, established additional accounting officers to settle the war accounts, and Mr. Hagner says, "the case of Major Champlin, with many hundreds of others, was turned over by the paymaster general for settlement, and was, as early as the immense number of

accounts would possibly permit, attended to. From the large amount found standing to the debit of Major Champlin, it was believed that he must have further and large accounts to render; and to afford him an opportunity of doing so he was written to from time to time, from this office, urging the transmission of them. On the 11th of May, 1818, he was informed that, unless his accounts and vouchers were rendered before the 1st of July following, his account would be stated and reported for suit; and again on the 30th of May, 1818, to the same effect, under instructions from the Comptroller of the Treasury." On the 25th of June, 1818, abstracts and vouchers for payments as district paymaster, made in 1813, were received, and he was then called on to send all his vouchers, with an account current, which he had not before that time rendered. He promised, by letter of June 29, 1818, to exhibit all of his accounts in a few days. A further credit was allowed, by which the account was reduced to \$66,394 13, on the 15th of July, 1819, and his account as paymaster was reported for suit on the 26th of July, 1819, and as deputy quartermaster general on the 11th of August following. A correspondence was opened between Mr. Hagner and Mr. Stedman, of Charleston, as early as 1822, and was continued until 1825, relative to a trunk of papers that belonged to Major Champlin, when it was received at the Third Auditor's office. These papers were examined, and another settlement was made, which reduced the balance to \$55,927 20, and a transcript was sent to the agent of the treasury, on the 18th of July, 1826.

A suit was directed by the agent of the treasury to be commenced against the said Champlin and his sureties in the Charleston district, where the bond was executed on the 28th of July, 1819. The marshal returned in regard to R. C. Jennings and General Macomb that they had left the State. Mr. Roddy's executors pleaded that no assets had come to their hands, and the plea was sustained. Afterwards another suit was commenced, on ascertaining that they had received assets; and, after several continuances, judgment was recovered against said executors in May, 1829, and they have offered to pay their proportion of the judgment.

A judgment was recovered against Samuel Champlin, the principal in the bond, at the September term, 1826, on which an execution was issued, and was returned at the November term following "*nulla bona*."

As to the first reason urged by the petitioner why he should be discharged, because Major Champlin was promoted to be deputy quartermaster general, it would be necessary for the petitioner to state, and prove, if it was within his power, before he could derive any benefit from the promotion, the time when he was informed of it; for the ground for setting this up is, that he was induced from the promotion to conclude Major Champlin was not a defaulter as deputy paymaster general, and therefore made no inquiry about it. If this point can in any manner affect the liability of the petitioner, the time when he was first informed of the promotion is of importance; but the committee do not think, if it was stated and proven, it would entitle him to relief.

As to the second reason—that the petitioner was engaged in the public service, and in distant scenes—the committee remark that he was an officer in the service at the time he became surety, and must have known that he was liable to be ordered to any place where his services might be required; and although this consideration was entitled to all due weight with him before he signed the bond, it does not, in the estimation of the committee, affect his liability either legally or equitably.

The petitioner is mistaken in supposing that the money placed in the hands of Major Champlin, as paymaster, was in part expended in the Quartermaster's department. The accounts being kept separate and distinct, the expenditure was carried to the appropriate account, and a balance was found to be due to the United States from Major Champlin, as deputy quartermaster general, in the sum of \$74,956 89. The law is, if the obligee of the bond makes a new contract, or extends the time of payment by agreement, or varies the terms of the contract, the sureties are discharged; but any indulgence, by forbearing to bring a suit and enforce the collection, does not discharge the sureties.

If the government had been grossly negligent in settling the account, and a series of years had elapsed, and the circumstances of the principal had been such that the debt could have been collected, if diligence had been used in a reasonable time, and the principal had become insolvent after the expiration of such reasonable time, it would present a strong equitable case for the interposition of Congress. But, in this instance, the principal was called on to settle his accounts as early as the second quarter of 1814; and from that time until the suit was ordered, in 1819, he was repeatedly urged to forward his vouchers. It must be borne in mind, when deciding the question of negligence, that war was declared in little over a year from the time the bond was executed, and that the business necessarily accumulated upon the department, and could not be despatched with as much readiness as in a time of peace. One condition of the bond is "that the said Samuel Champlin shall regularly account," and this condition was broken before he received any appointment in the Quartermaster's department, and the petitioner was liable on the bond for this breach of the condition. The fault in not settling this account does not rest upon the accounting officers, who were urging a settlement, but upon Major Champlin, who neglected to render his accounts. The object in taking the bond was to indemnify the United States if the principal was not faithful; and his fidelity was guaranteed by the sureties. The Third Auditor used every exertion in his power to aid the sureties, not only in urging a settlement, but in obtaining the papers of the principal, from which to ascertain the credits to which he was entitled.

The deposition of William Cox has been taken for the purpose of proving that Major Champlin had the means at his disposal to pay the amount of his defalcation, if he had been required to do so. After stating his acquaintance with Major Champlin, and the confirmation of his appointment as deputy quartermaster general, in 1813, he says, "at which period, he, Major S. Champlin, enjoyed the good opinion of all his brother officers, as well as citizens, and stood very high in the estimation of General Pinckney; and, at which time, had he been called upon to settle his accounts as paymaster, it is my decided opinion he possessed all the ability and means."

Mr. Cox does not speak of any other period than that of 1813, when Major Champlin's appointment of deputy quartermaster general was confirmed; which we have seen before was in March. The committee cannot think the government is chargeable with any neglect for not having enforced the payment of what was due from him at that time, and they believe it would have been a subject of complaint if a suit had then been commenced, or if Major Champlin had been removed from office.

Mr. Cox seems to have formed his opinion rather from the general estimation in which Major Champlin was held than from any knowledge of his property. The extent of his property at this, or at any subsequent period, is susceptible of proof; and it would be more satisfactory, and more safe, to have the facts proven than to take the opinion of gentlemen, however respectable. A memorandum is found

among the papers, in which the cases of Joseph Crocket and George Johnston are referred to, where relief has been granted to sureties.

The committee applied for the report in the case of Joseph Crocket, for the purpose of ascertaining the grounds on which relief was granted, and were informed in the clerk's office that no report was made. The papers were then called for, and were hastily examined. Joseph Crocket was collector of the internal revenue, and his account remained unsettled for a series of years. It is proven that long after he was a defaulter he was possessed of a large property, amounting to more than sixty thousand dollars; the different farms, and other property are enumerated, and their value established; all of which he had disposed of, and was insolvent. Under these circumstances, the Judiciary Committee thought it furnished a case for relieving the sureties on equitable principles.

George Johnston became the surety of Benjamin F. Bourne, a purser in the navy, on the 30th of April, 1817. Mr. Bourne was ordered to the Mediterranean, in November, 1817, from whence he returned under arrest, in 1820; he was released from arrest in July, 1820, and was ordered to the frigate *Constellation*, when he was indebted to the United States in the sum of \$24,639. He returned from the Pacific in July, 1822, died in New York in November, 1823, without having been called on to settle his account; his account was not stated until March, 1824, and suit was not commenced against Mr. Johnston until some time in the year 1827, when his co-sureties had left the country and gone to England.

By the rules and regulations of the Navy Department, made in conformity to existing laws, no purser was to be ordered to a ship whose accounts were not settled, and who was a defaulter. Mr. Bourne was a defaulter at the time Mr. Johnston became his security, and the amount of his defalcation accumulated during each subsequent cruise. A judgment was recovered against Mr. Johnston, and he applied to Congress for relief. A bill passed the Senate, but its rejection was recommended by this committee, in a report made on the 12th of April, 1830.—(Vol. 3, 1st session, 21st Congress.)

A case was subsequently brought before the Supreme Court, and the sureties were discharged on the ground of duress, under circumstances in every particular similar to those that existed in the execution of Mr. Bourne's bond by Mr. Johnston. After this decision by the Supreme Court, Mr. Johnston applied again for relief, which was granted, on the ground that the bond was void at its inception; and being void, it was not equitable to hold him responsible, notwithstanding a judgment had been recovered against him.

The committee refer to their report above-mentioned, and to 9 Wheaton Reports, 735, and to 11 Wheaton, 184, for their opinion on the question of laches by the government. In the authority first referred to, as to the laws which require settlements to be made at short and stated periods, the court say: "but these provisions of the law are enacted by the government for its own security and protection, and to regulate the conduct of its own officers; they are merely directory to such officers, and constitute no part of the contract with the security. The general principle is that laches are not imputable to the government; and this maxim is founded not in the notion of extraordinary prerogatives, but upon a great public policy." The committee have bestowed much reflection on this case, which seemed to be demanded by the circumstance that a bill had been reported by a standing committee; and they have compared the facts and the circumstances with those that existed in other cases decided by the committee, and they have examined the law as pronounced by the court, where laches have been imputed by sureties against the United States, and they are constrained to say they do not think the petitioner, for anything heretofore noticed, is entitled to relief.

The subject of brevet pay appears to have been submitted to Mr. Eaton while he was Secretary of War, and he decided against its allowance on the 27th of May, 1831; and it was referred by the President to the Attorney General, acting Secretary of War, and his opinion was given at length, on the 6th of August, 1831, and approved by the President, and referred to and made a part of this report, so far as it relates to a construction of the law.

The same question was decided by Mr. Monroe, in 1822, and an order was issued, which has governed the accounting officers in settling this class of claims.

By the act of March 2, 1821, the military peace establishment was permanently reduced and fixed. One major general and two brigadier generals were retained in the service. General Macomb was not retained as one of the brigadier generals, but accepted the appointment of chief of the Engineer department. The early decision of Mr. Monroe must have satisfied General Macomb that he was not entitled to brevet pay, so long as that decision remained unrevoked; and it was optional, whether to remain at the head of the Engineer department or retire from it.

Having referred to the decisions of those whose province it was to decide this question the committee will not enlarge upon it; and concurring in those decisions, they think the petitioner is not entitled to an allowance for brevet pay. The following resolution is submitted:

Resolved, That the petitioner is not entitled to relief.

DEPARTMENT OF WAR, August 5, 1831.

SIR: In obedience to your order I have examined the argument offered by Mr. Balch in support of the claim of General Macomb, to be allowed the pay and emoluments of a major general while he was chief engineer, and as such had the charge of the Engineer department, from May 1, 1821, to April 30, 1828, and I respectfully submit for your consideration the following report:

By the act of Congress of April 16, 1818, officers who have brevet commissions are entitled to receive the pay and emoluments of their brevet rank "while on duty, and having a command according to their brevet rank, and at no other time." The expressions, *and at no other time*, contained in this law, repeal the act of 1812, so far as it gave a title to the pay and emoluments of the brevet rank under other circumstances than those mentioned in the act of 1818.

The whole question referred to me therefore turns upon the construction of the above-mentioned act of Congress of April 16, 1818. By this law the title to the pay and emoluments of the brevet rank depends entirely upon the character of the command assigned to the officer; that is, upon the character of the body placed under his command, and he is entitled to the pay of his brevet rank only when the character and organization of that body renders it the appropriate military command of an officer of that grade in the army; for it is then only that he can be said to have a command according to his rank.

It follows, that in order to entitle General Macomb to the pay and emoluments of a major general, the command assigned to him must have been such a one as, by the rules and regulations of the army, was the regular and appropriate command of a major general. The command which properly belongs to such an officer does not depend upon the number of men placed under his control, nor upon the importance of the duties and station assigned to him. An officer may have a body of artificers and laborers under his direction, engaged in erecting fortifications or in making roads, as numerous as the regular command of a major general, yet such a body of men is not the appropriate command of a major general, he could not be said to have a command according to that rank. The appropriate command of a major general is a division of the army, and the military character of the body, and their organization according to the regulations of the army, are essentially necessary in order to constitute them a division, and make them a major general's command. General Macomb did not command a body of this description. The greater part of the persons under his control did not belong to the army, and had neither the military character nor the organization required to constitute a division. He had not therefore a command according to the rank of a major general, and consequently, under the act of Congress of 1818, is not entitled to the pay and emoluments of that rank. The construction supposed to have been given to this act of Congress, in analogous cases, is also relied upon. I have not thought it necessary to inquire on what principles the allowances were made to the several officers mentioned in the argument referred to me. In the case before me, the pay and emoluments in question are claimed only upon the ground that the character of the command assigned to General Macomb was such as entitled him to the pay and emoluments of his brevet rank. Whether he is or is not so entitled must depend upon the act of Congress; and if that act, upon its true construction, does not entitle him to the pay and emoluments claimed, the Executive branch of the government cannot enlarge its operations beyond the proper meaning of its words, nor allow the pay and emoluments, when the legislature have not authorized it to be done.

There is another view of this subject, which I beg leave to present to the President. The same question now under consideration was brought before Mr. Monroe while he was President, and decided by him in his order of June 12, 1822, and the accounting officers have ever since acted upon this construction of the law. I should doubt very much whether the correctness of that decision can now be properly inquired into by the Executive branch of the government. It is true that erroneous decisions, founded upon mistakes in matters of fact, or occasioned by mistakes in figures and calculations, may, without doubt, be corrected by their successors in office at any time afterwards when the mistake is discovered; but when the President, acting within the scope of his authority, and with all the facts before him, pronounces a decision, founded upon the construction of a law of Congress, and that decision is acted upon, and the account finally settled accordingly, I should incline to think that the account cannot properly be re-opened for revision by his successors in office; and if the decision is an erroneous one, and injustice has thereby been done to an individual, the remedy is with the legislature. In any other view of the case an appeal would be to each succeeding President from the judgment of his predecessor, and the accounts and transactions of the government would always remain unsettled, and liable to be reviewed and reconsidered at any period, however remote. Such right of appeal, on the part of the individual, does not seem necessary for the purposes of justice, and would be exceedingly inconvenient and injurious to the public.

The case of General Macomb, it must be admitted, is one of some hardship; his brevet rank was gallantly earned; it was equal to that of Generals Scott and Gaines; and the command he held was as important and as full of responsibility as the respective commands held by them, yet they received the pay and emoluments of major generals, while General Macomb received only the pay and emoluments of a brigadier. I am persuaded that if the subject had been brought before Congress they would have felt the justice of placing them all upon the same footing, and I should have taken pleasure in finding myself justified in reporting in favor of the claim he makes; but upon a careful examination of the whole case, I think his claim cannot be lawfully allowed, and report accordingly.

I am, sir, with the highest respect, your most obedient servant,

R. B. TANEY, *Acting Secretary of War.*

The PRESIDENT of the *United States.*

Approved August 6, 1831.

ANDREW JACKSON.

[2D SESSION.]

MEASURES TAKEN FOR THE PURCHASE OF A SITE AND ERECTION OF BARRACKS AT
NEW ORLEANS.

COMMUNICATED TO THE SENATE FEBRUARY 27, 1833.

DEPARTMENT OF WAR, *February 26, 1833.*

SIR: I have the honor to transmit a report from the quartermaster general, showing what measures have been taken for the purchase of a site, and the erection of barracks, &c., in the vicinity of New Orleans, in compliance with a resolution of the Senate of the 22d instant.

With great respect, I am, sir, your obedient servant,

LEW. CASS.

Hon. HUGH L. WHITE, *President of the Senate.*

QUARTERMASTER GENERAL'S OFFICE, *Washington City, February 26, 1833.*

SIR: In compliance with a resolution of the Senate of the 22d instant, referred to this office yesterday, which requires that the Secretary of War communicate to that body "what measures, if any, have been taken to carry into effect the law of the 14th July, 1832, for the purchase of a site and the erection of barracks, quarters, and storehouses in the vicinity of New Orleans," I have the honor to report that the season had so far advanced before the appropriation was made that no measures could be adopted for carrying the law into effect during the summer with any prospect of success; and the prevalence of the cholera and of the yellow fever at New Orleans prevented any attempt to carry it into effect during the autumn.

But Lieutenant Colonel Twiggs, one of the most efficient officers of the army, being under orders for New Orleans, was requested to confer with the governor of Louisiana and the mayor of the city as to the most eligible site, and to communicate the views of those officers with his own on the subject. Lieutenant Colonel Twiggs was stopped on his way and assigned to the command of the troops at Augusta, Georgia, which deprived the department of the advantage of his experience and agency in selecting a proper site, since which, the only measure adopted has been to order an officer of the Quartermaster's department to New Orleans, who will be required to take immediate measures to carry the law into effect.

I return the resolution; and I am, sir, respectfully, your obedient servant,

TH. S. JESUP, *Quartermaster General.*

HON. LEWIS CASS, *Secretary of War, Washington City.*

[2D SESSION.]

STATEMENT OF THE ARMS MADE, AND EXPENSES INCURRED, AT THE NATIONAL ARMORIES IN 1832.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 28, 1833.

DEPARTMENT OF WAR, *February 23, 1833.*

SIR: I have the honor to transmit a statement of the expenditures incurred, and of the arms manufactured at the national armories, in the year 1832, prepared in conformity with the provisions of the act of April 2, 1794.

With great respect, I am, sir, your obedient servant,

LEWIS CASS,

HON. ANDREW STEVENSON, *Speaker of the House of Representatives.*

Statement of the expenditures made at the national armories, and of the arms, &c., manufactured therein, during the year 1832.

	Expenditures.					Arms, &c., manufactured										
	For buildings, canals, and other permanent improvements.	For the manufacture of arms.	For the manufacture of Hall's rifles.	For miscellaneous expenses not embraced in the foregoing.	Total amount expended.	Muskets.	Hall's rifles, without bayonets.	Screw-drivers.	Wipers.	Ball screws.	Spring vises.	Flint caps.	Arm chests.	Carbines repaired and fitted with new bayonets.	Ammunition flasks.	Ballist moulds.

G. BOMFORD, *Colonel of Ordnance.*ORDNANCE OFFICE, *Washington, February 23, 1833.*23^D CONGRESS.]

No. 551.

[1ST SESSION.]

ANNUAL REPORT OF THE SECRETARY OF WAR SHOWING THE CONDITION OF THAT DEPARTMENT IN 1833.

COMMUNICATED TO CONGRESS, WITH THE MESSAGE OF THE PRESIDENT, DECEMBER 3, 1833.

DEPARTMENT OF WAR, *November 29, 1833.*

SIR: In submitting to you, agreeably to your instructions, a report of the operations and administration of this department for the past year, it affords me pleasure to bear my testimony to the zeal and ability of the respective officers at the head of the various bureaus, and of those employed to aid them in the performance of the important functions committed to this branch of the executive government.

A reference to the accompanying reports and documents will show the state of the army, as well with relation to its numbers, and their position and condition, as to the progress of the various works intrusted to them, and the collection and preservation of the necessary *matériel* for offensive and defensive operations, which is indispensable to the safety of the country. The principle which governed the reduction of the army from a war to a peace establishment has been found by subsequent experience to be salutary, and its practical operation has been to form a body of officers equal in all the requisites of military knowledge and efficiency to those of any other service which is known to us. The army is so organized that should an increase become necessary in consequence of those conflicts of interest and opinion to which all nations in their intercourse with one another have been exposed, and from which we have no right to expect perpetual exemption, any reasonable addition may be made to it without disturbing its arrangement; and the professional knowledge and experience embodied in it will be immediately felt in the new corps, and will identify them with those previously in service. The military experience of other countries, as well as of our own, has shown that the system of extension, by which new and old troops are incorporated together, is much better calculated to produce discipline and subordination, and thus to meet the exigencies of a service which does not allow large bodies of troops to be kept up in time of peace, than the organization of separate corps, composed of inexperienced officers and men, with all their military knowledge to acquire and all their military habits to form. And this is more particularly true of the staff departments of an army, upon which its movement, its subsistence, and the economy of its administration must principally depend. The system established in our service is equally creditable to the army and satisfactory to the government, and may be applied to any necessary extent without any diminution of that economy and efficiency which have heretofore marked its operation.

Much advantage is anticipated from the operation of the act passed at the last session of Congress for improving the condition of the army. Already its effects have been felt, as the subjoined documents will show, in the decrease of desertion and in the increase of the business of recruiting. The addition to the pay of the rank and file, the reduction of the term of service, and the improved condition of the non-commissioned officers, promise important meliorations in the character of the army. This prospect cannot but be interesting to the government and the country. Although the numerical strength of the army is comparatively small, it is yet sufficient to excite public solicitude; and this must be increased by the consideration that the character of our military establishment may hereafter essentially depend upon the measures now taken for its moral and intellectual advancement. Although it were idle, in the present state of the country, to apprehend any danger from the force which is employed, still the lessons of experience taught by the progress of events in other nations ought not to be neglected, nor the possibility overlooked that other circumstances may lead to the increase of our military strength, and to the diminution of that wise jealousy which is now one of our national characteristics. Moral habits in the soldiery constitute one of the best safeguards against the abuse of military power, and their inculcation has engaged the attention of this department during successive periods of its administration. Amongst other measures which have been adopted with this view, you have recently directed the discontinuance of all parades on Sunday, in order that that day may be exclusively devoted to the purposes of instruction and improvement. Certainly, in time of peace, no just reason can exist for converting a day of rest and devotion into a day of military parade.

The act for the better defence of the frontiers by raising a regiment of dragoons is in the process of execution. About six hundred men have been enlisted and most of the officers appointed, and five of the companies have been ordered to proceed to Fort Gibson, upon the Arkansas, where they will be stationed during the winter. The remainder of the regiment will be concentrated at Jefferson Barracks this season, and it is intended in the spring to order the whole to proceed through the extensive Indian regions between the western boundaries of Missouri and Arkansas and the Rocky mountains. It is deemed indispensable to the peace and security of the frontiers that a respectable force should be displayed in that quarter, and that the wandering and restless tribes who roam through it should be impressed with the power of the United States by the exhibition of a corps so well qualified to excite their respect. These Indians are beyond the reach of a mere infantry force. Without stationary residences, and possessing an abundant supply of horses, and with habits admirably adapted to their use, they can be held in check only by a similar force, and by its occasional display among them. Almost every year has witnessed some outrage committed by them upon our citizens, and, as many of the Indian tribes from the country this side of the Mississippi have removed and are removing to that region, we may anticipate their exposure to these predatory incursions, unless vigorous measures are adopted to repel them. We owe protection to the emigrants, and it has been solemnly promised to them; and this duty can only be fulfilled by repressing and punishing every attempt to disturb the general tranquillity. Policy and humanity equally dictate this course; and there is reason to hope that the display of this force will itself render unnecessary its hostile employment. The more barbarous tribes will perceive that their own safety is closely connected with the permanent establishment of pacific relations both with the United States and with the other Indians.

It is due to the regiment of dragoons to remark that its composition is believed to be good, and I anticipate it will do honor to the army and render effectual service to the country.

I feel it a duty once more to ask your favorable interposition in behalf of the medical corps. There is no portion of the army whose compensation is so utterly inadequate to their services. The pay of the highest grade but little exceeds that of a captain, and the pay of the lowest that of a first lieutenant; and these two grades constitute the whole range of service within the reach of medical officers. In the line of the army, and most of the staff departments, there are successive gradations of rank, each with increased emolument, to stimulate the exertions and to reward the services of the officers. The importance of professional skill and talent in the medical corps will not be doubted; and the dispersed condition of our army in time of peace, and its exposure to the effects of various climates, render the conservation of its health an object of much solicitude; and in time of war this solicitude will be increased by the perils of active service.

In order to place in a proper condition this branch of our military establishment, a system of examination has been recently instituted, by which the pretensions of medical gentlemen seeking appointments in the army will be subjected to rigid scrutiny. A board, composed of able and experienced surgeons, has been organized, and the various members of the department have been examined by them. The result has already been highly useful, and cannot fail to be so for the future. But, while the standard of professional acquirements is thus increased, justice demands that the rate of compensation should be examined, and that it should be rendered commensurate with the duties and responsibility of this most useful class of officers. It is not to be expected that the medical corps can retain the able men who now compose it, or see others join it, unless their services are adequately rewarded.

The act organizing the subsistence department expires, by its own limitation, on the 2d day of March next. It was originally passed in 1818, and has been continued, by successive temporary acts, till the present time. The reason of this course of legislation is undoubtedly to be found in the fact that the introduction of the system was an experiment, and it was deemed prudent to test operations before a permanent character was given to it. This has been fully done, and the result is, in every point of view, satisfactory. All who were acquainted with the mode of supplying the army previously to and during the late war, and for a few years after its termination, must be sensible of the superiority of the present plan. In the quality of the provisions, in the certainty of the supply, and in the economy of administration, its operation is decidedly superior to the old system, where contractors furnished and issued all the subsistence required. The continued failures that took place, and frequently in the most critical state of affairs, the controversies arising out of perpetual attempts to issue unsound provisions, and the serious obstacles which these and the other operations of the system interposed to the public service, must be fresh in the recollection of every military man who participated in the events of those periods. The army is now well and promptly supplied, and the faithful officer at the head of the subsistence department has established a system of purchasing, of issuing, and of responsibility, which, while it insures this result, guards the public interest against loss and imposition, as far as a business necessarily so extended permits. During the fifteen years in which this department has been in operation, more than five millions and a half of dollars have been expended under its direction, and the whole loss which has been incurred by the default of its officers does not amount to sixteen thousand dollars.

I consider that the time has arrived when the present arrangement should be rendered permanent, and I therefore present the subject with that view to your notice. And I also beg leave to suggest that the compensation of the clerks in the office should be increased. It is now lower than the average amount allowed in the other public offices, and less than is due to their labor and responsibility.

The report of the visitors appointed to examine the Military Academy shows that the institution is in a prosperous condition, and is fulfilling the duties committed to it, in the education of the young men destined for the military service of the country. The suggestions made by the visitors for the improvement of this national school, are the result of a careful examination, and, coming as they do from a body of able and impartial citizens, are entitled to much consideration. They appear to me just in themselves, and promising, in the event of their adoption, salutary consequences to the institution.

There is one subject which I feel particularly desirous of placing before you. The situation of teacher of drawing corresponds neither with the nature and importance of the duties required of that officer, nor with the professional merit of the distinguished artist who has relinquished the fair prospects held out to him in a foreign country to accept it. The art itself is highly important to military men, and its acquisition is essential to a respectable standing at the academy. It is very desirable that the instructor should unite in his person those high qualifications, natural and acquired, which have in all ages been the lot of those who have attained eminence in the art, and which have placed it among those pursuits that are at once the cause and the effect of advanced improvement in society. I respectfully recommend that this officer be placed in the same situation as the professors at the academy, and I cannot but believe

that such a measure would not only be just in itself, but would be a proper tribute of respect to the liberal arts, and a proper notice of one whose professional talents and success have been honorable to his country.

I have had the honor heretofore to submit to your consideration my views in relation to brevet commissions in the army, and I am induced, as an act of justice to those entitled to them, again to present the subject. If no new legislation is contemplated, nor any action of the Senate which shall change the principle or practice heretofore prevalent, no objections occur to me to delay any longer these promotions. The officers have earned them by length of service, agreeably to the established usage; and to make a discrimination without any previous declaration, so as to exclude from this advantage those who are at this time entitled to it, does not seem called for by the exigency of any circumstance connected with this subject. And, in fact, there are no very obvious reasons occurring to me why these professional honors, which, in common cases, make no demand upon the treasury, but serve to foster those professional feelings which give elevation to the military character, should not be granted, as they have heretofore been. Under ordinary circumstances they would produce no practical operation, either with relation to emolument or command. When they should do either, it would be precisely when their value would be enhanced by the very state of things producing this change in their operation; when the greater experience of the brevet officer would entitle him to an enlarged command, and to a corresponding rank over those, whether in the regular army or the militia, whose qualifications, so far as these depend upon service, are less than his.

The attention of the army has been frequently drawn to a project for the establishment of a fund for the support of invalid officers, and of the widows and children of such as may die in the service. The object is a commendable one; and as the only aid expected of the government is such legislative provision as may be necessary to give effect to the measure, in conformity with the general views of the officers of the army, it is certainly entitled to the favorable regard of the government. A moderate and stated deduction from the pay of each officer would create a fund which would afford essential relief to many who otherwise would be exposed to want and penury, and might soothe the declining years of meritorious officers, who may have necessarily expended in the maintenance of their families the whole allowance made to them by law, and who, without such an arrangement, would look forward with anxiety for the future. Whatever plan may be ultimately adopted, a legal organization is essential to its operation and success; and as the funds will be provided by the officers themselves, and for their own advantage, the administration will no doubt be committed to them, to be exercised by such persons and in such manner as they may direct. The considerations connected with this measure are so obviously just and in accordance with the dictates of prudence and humanity, that I trust they will be favorably considered. And I also feel it my duty to bring before you a kindred subject connected with the rank and file of the army, and having for its object a provision for the support of superannuated soldiers. In our service, as at present organized, a soldier can only be retained as long as his physical powers are sufficient to enable him to perform the duties required of him. When his constitution fails, unless it is the result "of disability incurred in the line of his duty," he is discharged without any provision for his support, and generally, from the *habits of his life*, without the disposition and too often the power to labor, and without the means of support. He is then thrown upon the charity of the community, after devoting the best of his life to the service of his country.

This result may be easily obviated without expense to the government, and an ample provision made for those discharged soldiers who are unable to procure the means of support. The principle which has been long and wisely applied to the navy may be safely applied to the army. An inconsiderable deduction from the pay of each soldier would go far towards the creation of a fund for this purpose. And if this deduction were to commence with those who might enlist after the passage of the law, there could be no objections on account of the previous engagements formed with the soldiers. And there are three auxiliary sources of revenue which may be applied towards the former object. These are:

Fines assessed by courts-martial;

The pay due to soldiers who may die without leaving any heirs to claim it;

A proportion of the post fund, which is principally derived from a tax upon sutlers.

It is believed that the means which may be realized agreeably to this suggestion would be found sufficient to provide for the maintenance of this class of persons whose condition is now so hopeless and so unsuited to the character of the government and the feelings of the community.

The experience of every year adds to the conviction, that the sooner the Indians remaining east of the Mississippi migrate to the region west of that river, the sooner will they be relieved from the embarrassments of their present position, and placed in a situation where they may physically and morally improve, and look forward to a prosperous and permanent destiny. All the reports which reach the department upon this subject concur in the representation that the emigrants already there are comfortable and contented—that the region assigned to them is fertile, salubrious, and as extensive as they and their descendants for many generations can require. They are making improvements, and erecting dwellings, and are evidently laying the foundations of a social system which, it is to be hoped, will afford them security and prosperity. As a striking proof of their improvement, and of the quantity of provisions raised among them, it may be stated that one of the contracts for furnishing provisions has been taken by a Choctaw, who is said to have a supply of his own amply sufficient to enable him to meet his engagement. It is fortunate for the Indians themselves, and for the great cause of humanity, that the efforts of the government to persuade them peaceably and voluntarily to remove are every year crowned with more and more success. Since the last annual report from this department, the conditional arrangement made by the Seminoles for their emigration has been rendered absolute by a personal inspection of the country proposed for their residence. They have examined, and are satisfied with it; and if the treaty should be ratified by the Senate, they will soon leave the Territory of Florida. An arrangement has also been made with the separate bands in that Territory, by which they have agreed to emigrate; and thus provision has been made for the removal of the whole Indian population from Florida.

The treaty with the Chickasaws has terminated all difficulties with that tribe. It is understood that the exploring party provided for in that instrument are about to commence their journey with a view to select a residence west of the Mississippi. If they succeed, they will remove within the period limited. If they do not, and choose to remain, they will become, with their own consent, citizens of Mississippi, and will occupy, as absolute owners, the several tracts of land assigned to them.

The obligations assumed by the United States in the treaty with the Choctaws for the removal of those Indians have been fulfilled. From the reports which have been made to the department it appears that about fifteen thousand individuals of this tribe have been removed. A party, estimated to contain

from fifteen hundred to three thousand persons, have changed their usual place of residence in Alabama, and have declined accompanying the other Indians in their emigration. It is believed that this party is composed principally of the worst portion of the tribe, and that they intend to hang upon the white settlements, in order to indulge the vicious habits they have acquired. As the government has scrupulously fulfilled its engagements with these people, which terminate with this year, and as every exertion has been made by the proper agents to induce them to remove, nothing remains but to leave them to the results of their own experience. It cannot be long before they will feel the necessity of rejoining the great body of the tribe.

Satisfied as you have been that the very existence of the Creeks in Alabama required their establishment in the country west of the Mississippi where so many of their tribe already reside, you have not hesitated to embrace every opportunity which offered of accomplishing this object. Instructions have been three times given to ascertain their views and to endeavor to persuade them to acquiesce in this course. The two first attempts proved unsuccessful. The result of the last is unknown. Independent of the general reasons arising out of our Indian relations which operated to induce these efforts, the peculiar state of things among these Indians, and a strong desire to remove the difficulties connected with them, had much influence in directing the negotiations.

The Sacs and Foxes have quietly removed to the region assigned to them, and the Winnebagoes have left the country upon Rock river, agreeably to the stipulations of the treaty with them, and retired across the Mississippi to their lands north of the Wisconsin.

Treaties have been formed with the Pottawatomies, Chippewas, and Ottawas, claiming the district on the west side of Lake Michigan, south of Green Bay and north of Chicago, for its cession to the United States, and with the Pottawatomies of the peninsula of Michigan for the relinquishment of their reservation south of Grand river.

With the exception, therefore, of the Miamies in the State of Indiana, of a band of the Wyandots at Upper Sandusky, in Ohio, and of scattered portions of the Ottawas and Chippewas in the peninsula of Michigan, north of Grand river and of Saginaw bay, probably not exceeding altogether five thousand individuals, the whole country north of the Ohio and east of the Mississippi, including the States of Ohio, Indiana, and Illinois, and the Territory of Michigan as far as the Fox and Wisconsin rivers, has been cleared of the embarrassments of Indian relations, and the Indians themselves have either already emigrated, or have stipulated to do so within limited periods and upon such terms as will insure them adequate subsistence and the means of establishing themselves comfortably in their new residence, unless, indeed, the aid and efforts of the government are rendered useless by their habitual indolence and improvidence. The Cherokees occupying portions of land in Georgia, Alabama, North Carolina, and Tennessee, and probably not exceeding eleven thousand persons, are the only Indians south of the Ohio and east of the Mississippi with whom an arrangement has not been made either for emigration or for a change of political relations. It is to be regretted that the same causes which have heretofore prevented an adjustment of the difficulties of that tribe and their removal west yet continue to defeat the efforts of the government. These causes are, no doubt, principally to be traced to the ascendancy of particular individuals, and to their desire to retain political influence and power. It is expected that about five hundred of these Indians will remove west this season, and the residue of the Cherokees then remaining east of the Mississippi will be, agreeably to previous computations, about ten thousand five hundred.

The commissioners west of the Mississippi are engaged in the execution of the duties connected with our Indian relations in that quarter. They have succeeded in arranging satisfactorily the disputed question of boundaries between the Creeks and Cherokees, which has for some time occasioned much embarrassment. They have also formed treaties with the Creeks, the Cherokees, the Senecas, the Shawnese, the Quapaws, and the Seminoles of Florida, by which all matters connected with these tribes have been satisfactorily adjusted. Their labors will be now directed to the other subjects indicated in their instructions, and which are important to a permanent arrangement of the various questions arising out of the new state of things which will be created in that region. Among these, one of the most interesting is a practical plan for regulating the intercourse of the various tribes, indigenous and emigrant, with one another and with the United States, and for the establishment of some general principles by which their own internal government can be safely administered by themselves, and a general superintending authority exercised by the United States so far as may be necessary to restrain hostilities among them and incursions into our borders. Until such a system is adopted, it is evident that the condition of these Indians cannot be secure, nor will the obligation imposed upon the government be fulfilled. The task requires an intimate knowledge of the local circumstances of the tribes of that region and of the country they inhabit, and a practical acquaintance with Indian habits, feelings, and mode of life. I trust the commissioners will be able to report a plan which will fulfil the expectation of those who have observed with solicitude the course of this matter, and which will eventually secure the prosperity of the Indians. As it is probable, however, that this cannot be effected within the time limited for the duties of the commissioners, I would respectfully suggest the propriety of their term of service being prolonged until the close of the next year.

There have been presented for allowance, under the pension act of June 7, 1832, thirty thousand six hundred claims. The whole of these have been examined and either admitted, rejected, or returned to the parties for supplementary action. Twenty-three thousand four hundred and thirty-eight certificates have been issued, eleven hundred and eleven claims have been rejected, three hundred returned cases are in the office awaiting or undergoing re-examination, thirteen hundred and fifty-one, which are incomplete in their proofs, are suspended till these are furnished, and four thousand four hundred and twenty-five are in the hands of the parties for additional evidence or authentication, or *in transitu* between them and the office.

It is creditable to the industry and efficiency of the Pension office that such a mass of business should have been performed within the period which has elapsed since the passage of the above law.

I have the honor to be, very respectfully, sir, your obedient servant,

LEWIS CASS.

The President of the United States.

No. 1.

REPORT OF THE MAJOR GENERAL OF THE ARMY.

HEADQUARTERS OF THE ARMY, *Washington, November 23, 1833.*

Sir: Since my last annual report on the state of the army nothing material has occurred in the movements of the troops worthy of particular notice. The discipline of the several corps continues to be maintained with regularity, and there is every reason to believe that they are in a condition for active service.

The battalion of mounted rangers has been discharged in conformity with your instructions, and the regiment of dragoons authorized by the act of the 2d of March, 1833, in lieu of that battalion, has been partially raised. Five companies of it are mounted, and have been ordered to Fort Gibson under Colonel Dodge, to be in readiness to accompany the commissioners in the ensuing season on their contemplated visit to the Indian country. The remaining five companies are being raised. The lateness of the selections and appointments of the captains and other officers from the mounted rangers has been the cause of the delay in filling the regiment; but there is every prospect that before the end of the year the regiment will be completed to its establishment.

The results expected to be produced by the operation of the act of the 2d of March of the last session of Congress "for the improvement of the condition of the non-commissioned officers and privates of the army, and for the prevention of desertion," so far as they can be ascertained, are decidedly favorable and satisfactory. The men who now offer to enlist are found to be of a more respectable class, and the number of enlistments does not diminish. In regard to desertions, there are strong indications of the salutary operations of the law, as the average number of men who have deserted for a given period since the passage of the bill is, by a comparison with the number of desertions for corresponding periods in the three years preceding, one-third less. A further proof of the beneficial influence of the law on the rank and file of the army is found in the fact that soldiers who have honorably completed their term of service now more readily re-enlist, which is considered a decided advantage to the public, both as it regards economy in the expenditure for the military service and in reference to the efficiency of the army.

In compliance with your instructions I herewith furnish the following statements and returns:

1. A statement showing the organization of the army, marked A.
2. A return of the actual state of the army, marked B.
3. A return exhibiting the strength of the eastern department, designating the posts and garrisons, marked C.
4. A return exhibiting the strength of the western department, designating the posts and garrisons, marked D.
5. A statement showing the number of recruits enlisted in the army from the 1st of January to the 30th of September, 1833, marked E.
6. An estimate of the funds required for the recruiting service for the year 1834, marked F.
7. An estimate of the contingent expenses of the headquarters of the army, including those of the office of the Adjutant General, for the year 1834, marked G.

I have the honor to be, sir, your most obedient servant,

ALEX. MACOMB, *Major General, Commanding the Army.*

Hon. LEWIS CASS, *Secretary of War.*

F.

ADJUTANT GENERAL'S OFFICE, *Washington, October 22, 1833.*

SIR: Pursuant to your instructions, I submit the following estimate for the expenses of the recruiting service of the army for the year 1834:

"Extra pay" allowed under the law of March 2, 1833, as a bounty for re-enlistments, to wit:

Two months' "extra pay" for five hundred re-enlistments, at \$12 for each soldier.....	\$6,000 00
It is calculated that on the 31st of December, 1833, there will remain in the treasury a balance of the appropriation for "bounties and premiums" for the current year amounting to.....	35,388 00

From the above sum of \$35,388 <i>deduct</i> the amount that will be required, as above estimated, for "extra pay" allowed to re-enlisted soldiers for the year 1834.....	\$6,000 00
There will then remain in the treasury on the 31st December, 1833, a balance of the appropriation for the current year, under the head of "bounties and premiums," not now required for that object, amounting to	29,388 00
Total amount required to be appropriated for "extra pay," as a bounty for re-enlistments for the year 1834.....	<u>6,000 00</u>

CONTINGENT EXPENSES,

Including quarters, fuel, bunks, straw, compensation to citizen surgeons for examination and medical attendance, magistrates' fees for administering the oath of allegiance to recruits, and all other expenditures on their account, until put in march to join their regiments, at \$8 per man for 2,817 recruits, exclusive of the number (500) of soldiers that will, it is calculated, re-enlist	22,536 00
From the above sum of \$22,536 <i>deduct</i> the balance of appropriation for "expenses of recruiting" for the current year which it is calculated will remain in the treasury on the 31st of December, 1833.....	6,043 00
Total amount required to be appropriated for " <i>expenses of recruiting</i> " for the year 1834.....	<u>16,493 00</u>

RECAPITULATION.

Amount required for two months' " <i>extra pay</i> " allowed to each soldier who may re-enlist in 1834	6,000 00
Amount required for " <i>expenses of recruiting</i> " in 1834.....	16,493 00
Aggregate sum required to be appropriated for the recruiting service for the year 1834	<u>22,493 00</u>

REMARKS AND EXPLANATIONS.

The number of recruits, as above estimated for, to fill up the rank and file of the army for 1834 is calculated as follows:

The vacancies existing in the rank and file of the army on the 30th of September last, as exhibited by the latest monthly returns received, were.....	1,429
To which <i>add</i> the number of discharges that will take place by the expiration of enlistments from the 1st of October to the 31st of December, 1833.....	212
<i>Add</i> also the estimated number of casualties by <i>death, desertion, and discharges for disability, &c.</i> , for the same period.....	300
	<u>1,941</u>
From the above <i>deduct</i> the number of recruits in depot and not assigned to regiments... 459	
Also, the estimated number that may be enlisted between the 1st of October and the 31st of December, 1833.....	500
	<u>959</u>
Deficiency in the rank and file of the army on the 31st of December, 1833.....	982
To the above deficiency <i>add</i> the number of discharges that will take place by the expiration of enlistments from the 1st of January, 1834, to the 31st of December, 1834	935
<i>Add</i> also the estimated number of casualties by <i>death, desertion, and discharges for disabilities, &c.</i> , for the same period.....	1,400
Total number of recruits, including re-enlistments, required for the year 1834....	<u>3,317</u>

Respectfully submitted.

R. JONES, *Adjutant General.*Major General ALEXANDER MACOMB, *Commander-in-chief United States Army.*

REPORT OF THE QUARTERMASTER GENERAL.

QUARTERMASTER GENERAL'S OFFICE, *Washington City, November 27, 1833.*

SIR: In obedience to your order, I have the honor to report the operations of this department for the 1st, 2d, and 3d quarters of the present year, in addition to which I include that portion of 1832 not embraced in my last annual report.

The balance remaining to be accounted for by the several officers of the department at the date of that report amounted to \$87,230 14

To which is to be added:

1. Remittances, viz:	
In the 4th quarter of last year.....	\$218,652 45
In the 1st quarter of the present year.....	198,049 86
In the 2d quarter of the present year.....	304,124 99

In the 3d quarter of the present year.....	\$383, 232 10	
In small sums during the year from other departments, not on requisitions from this office, but accounted for through it.....	37, 894 31	
Total amount of remittances.....		\$1, 141, 953 71
2. Proceeds of the sales of public property, either unfit for service or no longer required for public use, and rents received for public lands and buildings not required for military purposes.....		26, 221 15
3. Errors, overcharges, and disallowances credited by officers in their accounts with the department from the 2d quarter of 1829 to the 2d quarter of 1832, as ascertained by an examination of the several accounts.....		5, 506 27
Making the total to be accounted for.....		\$1, 260, 911 27
Of which there has been accounted for:		
1. By disbursements, viz: in the 2d and 3d quarters of 1832, not included in the last report, the accounts not having been received at its date, including an error in that report of \$480 44.....	\$12, 268 74	
In the 4th quarter of 1832.....	294, 601 11	
In the 1st quarter of 1833.....	169, 178 06	
In the 2d quarter of 1833.....	241, 100 03	
In the 3d quarter of 1833.....	450, 641 20	
		\$1, 167, 789 65
2. By deposits to the credit of the Treasurer of the United States.....		1, 835 14
3. By amount turned over to the Ordnance department by the assistant quartermaster at Detroit, being part of the proceeds of public prop- erty sold at that place.....		7, 000 00
Total accounted for.....		1, 176, 624 79
Leaving a balance to be accounted for of.....		84, 286 48

The accounts of six officers remain to be received, which will reduce this balance \$10,629. The remainder is distributed among more than fifty officers, at the various posts in the Union, and is applicable to the service of the present quarter, and it is confidently believed that the whole of it will be applied to the proper objects, and accounted for at the close of the quarter.

The large amount of public property under the administration of the department is promptly accounted for by the officers who receive it, as well of the department as of the several corps of the army.

The balance remaining in the treasury of the appropriation for the Quartermaster's department proper, with the sums due to it for expenditures on account of other branches of service, will be fully sufficient for all demands against it for the remainder of the year; but it is apprehended there will be an arrearage on account of the appropriation for the transportation of the army, and also on account of that for the travelling allowance of officers.

Of the public works under the direction of the department, the military road in the State of Maine, which has been in a course of construction for several years, is now completed, and is represented by the officer charged with its superintendence to be of a superior character. Connecting, as it does, the resources of the Atlantic with an interior post on a distant frontier, it may be justly considered a work of importance, at least in its military relations.

The road from Fort Howard, Green Bay, to Fort Crawford, on the Mississippi river, has been surveyed and located during the present season. This is an important military communication, intended to connect three of the exterior posts on the northwestern frontier. To complete the work a further appropriation will be necessary.

The Washington and Jackson road, in the Territory of Arkansas, has been extended as far as the limited appropriation made at the last session of Congress for the purpose would warrant; but the road being a highly important communication, connecting the centre of the Territory with its frontier on the Red river, it should be put in a state to be used at all seasons of the year, for which purpose a further appropriation is required.

The road from Pensacola to Tallahassee, and thence to St. Augustine, in Florida, has been partially repaired, but the appropriations have been found altogether insufficient. Uniting, as it does, the posts on an important frontier, it should be kept at all times in good repair. I consider the small sums which have been appropriated for some years past, from their inadequacy, as money wasted. To put the road in good repair a liberal appropriation is required.

That portion of the road from Memphis, Tennessee, to Little Rock, Arkansas, lying between the latter place and St. Francis river, has been in a course of repair, in pursuance of the appropriation made for that object.

Measures were taken early in the year to procure a suitable site for the barracks authorized in the vicinity of New Orleans, but the malignant diseases which have prevailed there throughout the season have occasioned much delay, and prevented any conclusive arrangement being made. The officer charged with the negotiation has, however, been instructed to close with one of the several propositions made, and an experienced officer is on his way to New Orleans, with instructions to adopt immediate and energetic measures to accomplish the work; and unless the diseases which have proved so destructive should continue through the winter, it is believed that accommodations for two companies, at least, may be ready by the 1st of June.

Arrangements have been made for repairing the barracks and building a hospital at Baton Rouge, but a further appropriation will be necessary to accomplish the work in a suitable manner.

A site has been obtained for the barracks authorized to be erected in the city of Savannah, and the officer charged with the superintendence has obtained a part of the materials and has commenced the work. To complete it properly a further appropriation is required.

The barracks at Fort Crawford, owing to the interruption of operations by the presence of the cholera, and causes connected with our Indian relations in that vicinity, have not yet been completed. They are, however, in progress, and the work will be prosecuted as circumstances will permit.

Nor has it been practicable to complete the barracks at Fort Howard, Green Bay. They are also in progress, but another season and an additional appropriation will be required to complete them.

The storehouse authorized to be erected in Pittsburg, Pennsylvania, has been completed in accordance with the appropriation for that object, and the necessary repairs have been bestowed on the wharf at Fort Washington, Maryland.

In regard to the Delaware breakwater, the experiment has now been fairly made. That work already affords a good harbor for the vessels engaged in transporting the materials used in its construction, as well as for such vessels engaged in commerce as take shelter under it in time of storm.

General Bernard's estimate to complete the work	\$2, 216, 950
The several appropriations up to this date amount altogether to	1, 160, 000
Leaving of the estimate not yet appropriated a balance of	1, 056, 950

The whole length of the breakwater, according to the plan, is	2, 600 feet.
The deposit of stone already extends	3, 700 feet.
Of which there are elevated five feet above the plane of high water	1, 007 feet.
Nearly level with high water	950 feet.
Averaging fifteen feet above the sea bottom	743 feet.

The whole length of the ice-breaker, according to the plan, is	2, 700 feet.
The deposit of stone extends already	1, 500 feet.
Of which there are elevated above the level of high water	1, 400 feet.
Level with high water	978 feet.
Averaging fourteen feet above the sea bottom	300 feet.
	122 feet.
	1, 400 feet.

One hundred and fifty-four thousand four hundred and fifty-nine tons of stone were deposited during the past season, and if we had had money to pay for it, one hundred and fifty thousand tons more might readily have been deposited with but little increase of the contingent expenses of the work.

I have increased the estimate for the ensuing year eighty thousand dollars, because there is no longer any doubt of the great advantage of the work to the commerce of the country. Twenty thousand dollars of that sum is for a permanent light-house, to be placed on the western extremity of the breakwater. It is required even now to point out the entrance into the harbor during the night, and it can be constructed at less expense while the operations upon the breakwater are in progress than after they shall have terminated. If adequate appropriations be made the work may be entirely finished in the year 1835.

The claim for furniture for their quarters has been preferred from time to time by a portion of the officers of the army, but as such an allowance has never been authorized in the land service, either by law or regulation, I have not considered it proper to present an estimate for the funds required to provide it, but I consider it to be my duty to submit the subject for your consideration, and I respectfully recommend, should you approve of the measure, that the attention of Congress be invited to it, and that an appropriation be asked for at least sufficient to furnish the quarters of officers below the rank of brigadier general stationed at permanent posts. Furniture is furnished for naval officers when serving at sea and at the naval stations on shore. The officers of the army think they have an equal claim to it, for they cannot perceive that that which is right in relation to one service can be wrong in relation to the other.

I have the honor to be, sir, your obedient servant,

TH. S. JESUP, *Quartermaster General.*

HON. LEWIS CASS, *Secretary of War.*

Nos. 3 and 4.

REPORT FROM THE ENGINEER DEPARTMENT.

ENGINEER DEPARTMENT, *Washington, November 23, 1833.*

SIR: In accordance with your instructions, I have the honor to submit the following report of the operations of this department during the year ending the 30th September last. It presents a general view of the state of the works under the direction of the department at that date, and is accompanied by statements marked A, B, and C. The first two relate to its fiscal concerns, and the last exhibits the works projected by the board of engineers which have not been commenced, and an estimate of their cost.

FORTIFICATIONS.

Fort Independence, Boston harbor.—In making the necessary preparations for commencing the repairs of this work, it was soon perceived that the amount of funds appropriated for that object would not be sufficient to effect it. The estimates were predicated upon the prices of materials and labor as they existed in 1831, since which they have risen about 25 per cent., judging by the best data that could be procured. Under these circumstances, it was deemed proper to limit the operations for the present on Castle island to the building of a sea-wall for its preservation, and the repairing of the southwest wharf. The former has been put under contract, and measures were taken for the early completion of the latter. An additional estimate for this fort will accordingly be submitted.

Fort Warren, George's island, Boston harbor.—The calls upon the department during the last season have been so numerous and of a nature so pressing as to render it impossible, with its limited means, to mature the plans for this work. Every effort in the way of preparation will, however, be made this fall and winter for the efficient prosecution of the preliminary works early next spring.

Fort Adams, Newport harbor, Rhode Island.—Great progress has been made in this work since my last report. The operations on it have been conducted in a manner altogether satisfactory. It is in a good state, and exhibits some of the finest specimens of workmanship to be met with in our public works.

Fort Hamilton, Narrows, New York.—There is a small amount of the last appropriation for this work yet unexpended in the hands of the agent. It will be applied, in the course of the coming year, to give the work that degree of finish which can only be attained after the lapse of sufficient time to allow the defects in construction that cannot be foreseen to develop themselves.

Fort Columbus and Castle William, Governor's island, New York.—Satisfactory progress has been made in the repairs of Fort Columbus, which will be completed, it is believed, this fall or early next spring. The operations for the repair of Castle William have been confined to the building of a wharf and the collection of materials, as it was deemed advisable to direct as much of the available means as might be found consistent with a due regard to economy to the attainment of one object at a time.

Fort Schuyler, Throg's Neck, East river, New York.—The attention of the officer charged with the construction of this fort has been directed principally to the accomplishment of such preparatory measures as shall enable him to commence and prosecute his operations with advantage as soon as the plans shall be matured and adopted. These are not yet in readiness, in consequence of incessant engagements of the officers of the department.

Fort Delaware, Delaware river.—The latter end of April a commencement was made on the Pea Patch island to construct the temporary quarters and workshops, preparatory to a demolition of the walls of the old fort. This object has been effected, and extended to provide for the accommodation of nearly all the laborers, mechanics, and others, whose time and services will be required in the construction of the work for the defence of this position.

Twenty-two thousand yards of the masonry of the old fort have been demolished by mining; 10,000 yards of the same have been removed, and transported to the exterior of the dike surrounding the island for its preservation; of which 300 running yards have been thus secured, and 400,000 bricks of the old work cleaned, preparatory to their being used in the construction of the new work.

To accomplish the removal of the material of the old fort, the most economical plan was to excavate the draining ditches of the island to such a size as would suit them for navigation with lighters. The extent of this excavation is 6,700 cubic yards.

Fort Monroe, Hampton Roads, Virginia.—A part of the funds placed at the disposal of the department for this work has been applied during the year to the objects specified in my last report. Although much has been done towards its completion, yet, owing to the great demand for labor, and the consequent difficulty in commanding it at Fort Monroe, though an advance of 15 per cent. was offered, the outwork on the front of attack is not in a state as far advanced as it was hoped it would be.

Fort Calhoun, Hampton Roads, Virginia.—By a reference to my last annual report, it will be perceived that it has for some time been a leading object at this work to compress the substratum, by the accumulation of materials upon it, to a state which will produce an equilibrium when it shall be required to sustain the weight of the walls and the armament of the fort. Twelve thousand five hundred tons of stone have been added to the mole, and eleven thousand eight hundred tons of building stone deposited on and near the walls during the year.

Fort Macon, Beaufort, North Carolina.—This work will be completed and ready for inspection by the middle of the present month. The works for the preservation of its site have been prosecuted with considerable advantage, and give promise that they will accomplish the desirable object for which they were begun.

Fort Caswell, Oak island, North Carolina.—As was anticipated in my last report, this fort will be completed and may be garrisoned before the end of this year.

Fortifications in Charleston harbor, South Carolina.—Castle Pinckney and Fort Moultrie have been much improved as regards their ability for defence, and the latter thoroughly repaired. Works to arrest the encroachments of the water on the site of Fort Moultrie have been commenced, but sufficient time has not yet elapsed to justify the expression of any opinion as to their ultimate effect. About 16,500 tons of stone have been added to the mole to be occupied as a foundation to Fort Sumter, and the necessary preparations made to commence the construction of this work as soon as the mole shall be finished.

Fort Pulaski, Cockspur island, Georgia.—About two months, at the commencement of the last working season at this work, were lost in consequence of the absence of the superintending engineer, who was withdrawn from his command to meet a pressing demand elsewhere. The work was prosecuted, however, with great efficiency during the remainder of the season, and the progress has been such as to give satisfaction. The means have been applied principally to meet the difficulties encountered in the foundations.

Fort Marion, St. Augustine, Florida.—The funds appropriated at the last session of Congress for this fort have been applied so far as it was deemed necessary for such a work; and operations have for some time been directed to the repairing of the sea wall connected with it, with a hope of accomplishing the object of the law on the subject by the middle of January or February.

Fort Pickens, Pensacola harbor, Florida.—The condition of this work is in a high degree satisfactory. The masonry, with the exception of a very small portion, is completed, and the entire work will, in all probability, be finished by the end of March next.

Fort at Foster's Bank, Pensacola harbor, Florida.—It was hoped, in the early part of the year, that the nature of the service would be such as to permit a convention of the board of engineers to revise, among others, the project for this work, and to fix its precise locality. This hope was, however, disappointed, and the funds have in part been, and the balance will be, applied to the collection of materials, and to making such preparations as will enable the constructing engineer to commence the work under the next appropriation to advantage, as soon as the plans shall be matured.

Fort Morgan, Mobile Point, Alabama.—This work will be completed and ready for inspection by the end of December next.

Fort Livingston, Grand Terre, Louisiana.—At the time of making the appropriation for this work, the land on which it was to be located was private property. Much time has unavoidably been consumed in effecting a purchase. The department has been assured, however, that the protracted negotiation with

the owner would soon be brought to a satisfactory termination, when the purchase and collection of materials will be made, preparatory to commencing the work with the next appropriation.

Contingencies of fortifications.—A considerable portion of the appropriation under this head has been applied during the year to the repairs of Fort Jackson, Battery Bienvenue, Tower Dupré, and Fort Wood, Louisiana, and Fort Washington, Maryland.

INTERNAL IMPROVEMENTS.

Chicago harbor, Illinois.—It being impossible to command the services of an engineer officer at this place, the works were given in charge to the commanding officer at Fort Dearborn. Owing to the position of Chicago, considerable difficulty was experienced in the early part of the season in procuring suitable materials and workmen to commence, as almost everything except timber and stone had to be drawn from Buffalo. The first proposals received, on the invitation of the commanding officer through the public prints, were rejected because of their exorbitant character. Proposals were again invited, and finally contracts made for the supply of a small quantity of stone and timber, more with the view to ascertain the resources of the country, where everything is new, and to create a competition, than with a hope of doing much in the way of construction during the past season. But little has been done, therefore, further than to collect some materials and workmen, and to construct a small portion of one of the piers. A commencement in a position like this is, however, of great value, and hopes are entertained of being able to prosecute operations with advantage during the next working season.

La Plaisance bay, Michigan.—Eight hundred and forty feet of new pier work were sunk at this place within the year; piles were driven nearly the whole length of the pier, and will be driven and secured by caps this fall. Considerable stone has been deposited in the pier, and, as far as the appropriation extended, the work has been prosecuted satisfactorily.

Oswego harbor, Sodus bay, Genesee river, Black Rock harbor, Buffalo harbor, and Dunkirk harbor, State of New York; Presque Isle harbor, State of Pennsylvania; Conneaut creek, Ashtabula creek, Cunningham creek, Grand river, Cleveland harbor, Black river, and Huron river, State of Ohio.—For the condition and progress made on these works up to the 30th September last, I beg leave to refer you to the annexed report of their general superintendents, marked D. From these it will be perceived that, although the operations at them continue to be attended with success, still much remains to be done before they can be completed in a solid and permanent manner; and as the expenditures on each already exceed the original estimated cost, and the amount required to place them in that condition is very great, it was thought advisable by the department that the subject should be brought fully to the consideration of Congress. With this view, a thorough inspection, to be made by a skilful and experienced engineer, was ordered during the last summer. His report on the subject, marked E, hereto annexed, is accordingly respectfully submitted. The estimates presented for these works are predicated on the recommendation of that officer and that of the local agents.

Kennebunk river, Maine.—The means provided for the works at the mouth of this river have been faithfully applied; the Hardin pier, so called, having been thoroughly repaired, with the exception, perhaps, of a small quantity of stone that may yet be required for the greater security of the work, which has been considerably extended, and which is much exposed to ice and drift-wood. Some additional work will be required to complete the improvement on the east side of the channel. It is deemed necessary to construct a pier of considerable length, extending from what is called the outer pier to the bar. The piers heretofore erected at this place are of wooden crib work, filled in with stone; and it has been observed that those which are up the river some distance are in a good state of preservation, while those lower down have been much injured by worms. Some, indeed, have been completely destroyed in the course of eight or ten years after their construction. For this reason the estimate for the additional pier alluded to contemplates the use of stone entirely.

Berwick branch of the Piscataqua.—The improvement in this river at Quamplegan rapids has been completed. There is now an unobstructed passage over the rapids of nearly six feet at mean high water.

Merrimack river, Massachusetts.—Some additions have been made within the year to the breakwater in course of construction to improve the navigation of the river at Newburyport. The work is represented as being in good condition.

It is thought that the erection of a pier, to extend from Badger's Rocks to Salisbury Head, would greatly improve the navigation of the river; an estimate for which is accordingly submitted and recommended for favorable consideration.

Deer island, Boston harbor.—The works for the preservation of this island have been prosecuted with much success, and it is expected that the whole of the masonry will be completed by the middle of this month. Four thousand tons of rough stone have been placed in the breakwater in front of the sea wall during the year; 2,000 tons more will be added during the present season, leaving only 4,000 tons to complete that work and the connecting breakwater between the principal walls.

Plymouth beach, Massachusetts.—The operations at this place have been of the same character as those of the previous year. They have been directed to the extension (about 510 feet) of the stone wall to the west of the breakwater, and to repairing the beach by planting grass. The grass is represented as doing well, and the condition of the beach generally as being good.

Provincetown, Massachusetts.—About 220 acres of ground were planted with beach grass during the last spring, besides repairing many places previously planted, but which had been injured by the encroachments of the sand.

Hyannis harbor, Massachusetts.—The breakwater at this place has been much improved and considerably increased since my last report. The additional length constructed within the year is about 230 feet, giving a length of 820 feet completed. Its entire length, when finished, will be 1,320 feet, leaving, therefore, 500 feet yet to be constructed.

Mill river, Connecticut.—The additions to this work have been completed, and are represented as having accomplished the objects for which they were made.

Harbors of Newcastle, Marcus Hook, Chester, and Port Penn, Delaware river.—The operations at the harbors on the Delaware river have been confined to the harbor of Marcus Hook, from which, by means of a steam dredging machine, 15,369 cubic yards of earth have been excavated and removed, forming a safe and secure retreat for about twenty sail of vessels. Some progress has been made in repairing one of the piers forming this harbor, using stone for all that part above the low-water mark.

To persevere upon the plan heretofore pursued is not deemed advantageous towards effecting the

desired object; any results accomplished by it would not, it is believed, be attended by a permanent good. The estimate presented for the service of the year is, however, to continue the operations upon the present plan.

Ocracoke inlet, North Carolina.—Though much retarded on account of tempestuous weather and the breaking of machinery, the operations at this place have been attended with considerable success, and with the most flattering effects upon the navigation through the inlet. A dredging machine has been kept at work when the weather would permit in Wallace's channel, from which about 34,000 cubic yards of earth have been removed within the year. A navigation of eight feet has been obtained through this channel.

Cape Fear river.—The jettee near Barnhard's creek, on the eastern side of the river, and the one near Old Town, on the western side, have been completed; that near Barnhard's creek continued to wash up during the last winter; and nearly the whole of the labor applied this year has been for the purpose of keeping these two jetties in repair. Notwithstanding the difficulties that have heretofore attended the construction of jetties, it is confidently anticipated that a navigation of fourteen feet water will be obtained when they are permanently secured.

Savannah river, Georgia.—An officer has been engaged during the year in making an examination of this river between its mouth and Savannah with a view to obtain the data necessary to enable the superintending engineer to apply the funds appropriated therefor to the best advantage. This examination is nearly brought to a close, when active operations will be commenced for the removal of obstructions, suitable preparations in the way of boats and machinery being in the course of preparation for the purpose.

Inland navigation between the St. John's and St. Mary's.—The improvement contemplated here requires the agency of a steam dredging machine. To have purchased one from the small appropriation placed at the disposal of the department would have so far exhausted it as to have left little or nothing for the prosecution of the work. Under these circumstances it was thought advisable to do nothing till the improvement of the Savannah river, and that at the St. Mark's or Apalachicola, would admit of the boats employed at these places being transferred to the St. John's and St. Mary's. Nothing, therefore, has as yet been done.

St. Mark's harbor and river, Florida.—A canal has been opened through the natural bridge on the St. Mark's. Owing, however, to the unexpected appearance of rock at this place much of the money which it was hoped might be applied to the improvement of the river above has been expended on it, and will render an additional appropriation necessary. The object of this appropriation will be to open the river to the only convenient place of landing for the upper country, and to deepen the channel already made, and that over the outer bar, at the entrance into the river, for the admission of large vessels drawing fifteen feet.

Ochlockney river, Florida.—The appropriation for the improvement of this river has been applied to the removal of the logs and trees which obstruct its navigation from its channel. The whole will be expended by the middle of the present month.

Apalachicola river and harbor.—Although the improvements contemplated at this place have been prosecuted under many disadvantages, owing to the difficulty of procuring laborers during the past season, yet, what has been done is of a character altogether satisfactory, and seems to promise a success beyond the most favorable expectations. The part of the channel that was deepened to ten feet has been increased by the action of the current to from twelve to fourteen.

Escambia river, Florida.—This river was surveyed in July last to ascertain the nature of the required improvement, and to obtain an estimate of its probable cost. In the following month the work was let out on contract, and will be completed this fall, leaving a portion of the funds unexpended.

Harbor of Mobile, Alabama.—The progress here has been satisfactory. The breadth of the bar at Choctaw Pass, or length of channel to be cut through it, is 620 yards; 580 were executed with a width of 100 feet on the 30th September; and the remaining 90 yards are, no doubt, finished ere this. Operations will be continued till the means are exhausted in increasing the width of the channel.

Pascagoula river, Mississippi.—Owing to a difficulty with the contractor the operations at this place have not been of a satisfactory character. The work was not resumed till the 17th June last, since which time nothing has been done further than to make some repairs of boats, machinery, &c. It was expected that the dredging machine would be in operation by the 1st instant.

Red river, Louisiana.—The removal of the great raft from the bed of this river has been shown, by the operations of Captain H. M. Shreve, during the last summer, to be perfectly practicable. He was at work at it till the means at the disposal of the department were exhausted; and his success leaves the most ample testimony of his great zeal and ability. Captain Shreve's report on this subject is so interesting that I deem it proper to lay it before you entire. It is herewith appended, marked F; and I would earnestly recommend for favorable consideration the estimate submitted with it for the prosecution to completion of this great work.

Arkansas river, Arkansas Territory.—The examination of this river was made by an officer of the engineers early in the spring, and the boats, machinery, &c., under the personal direction of Captain Shreve, commenced the removal of obstructions to its navigation in the early part of August last. At the latest advice not much had been done, however, owing to the unfavorable state of the water; but this winter, while operations will be suspended on the Ohio by reason of the ice, it is intended to concentrate a force on the Arkansas, and to prosecute the work to the extent of the available means.

The report of the officer who made the examination of this river above alluded to, being of an interesting character, is hereunto annexed, marked I.

Mississippi and Ohio rivers.—For the progress made in the improvement of these rivers, I beg leave to refer you to the accompanying report from the superintendent, H. M. Shreve, marked G.

Cumberland river, Tennessee.—Operations were commenced on this river 16th October, and continued till the 7th December, 1833. Owing to the unusual high state of the water little was done towards the improvement of its navigation other than the cutting away of the timber overhanging its banks on the island chutes and deep bends between Nashville and Harpeth island, and making the necessary preparation for prosecuting the work as soon as the water and season would permit. The work was resumed on the 1st of January last, since which time the operations have been directed with much success to improving the river at Harpeth shoals and their vicinity, to the cutting away of the hanging timber from the banks, and to the removal of logs, &c., from the sand bars.

Road from Memphis, on the Mississippi, to William Strong's house, on the St. Francis.—An examination and survey have been made of the country between the two points above named, with the view to the

location of this road; but the reports and drawings thereon not having been received, nothing has been done by this department. As soon as the reports shall be received the location and construction of the road will be commenced without loss of time.

Cumberland road in Ohio.—The affairs of this part of the national road have been managed in a manner highly satisfactory. The operations on it, though much influenced by the prevalence of the cholera in the section of country through which it passes, have been prosecuted with a zeal and ability highly creditable to the officer charged with their direction. The bridges between Zanesville and the 21st mile west from thence, inclusive, have been repointed and put into complete order; the culverts which had given way in consequence of bad material and workmanship have been taken down and rebuilt; the masonry between Hebron and Columbus, a distance of 27 miles, has been completed, with the exception of two small bridges, one on the 51st and the other on the 53d mile, declared defective in workmanship, and not accepted from the contractors. The masonry west of Columbus remains nearly in the state described in my last annual report, the existence of the cholera having prevented any improvement in it. Preparations have been made to construct the abutments for the bridges over the canal at Hebron, and the Scioto at Columbus; those for the former bridge will most likely be completed this fall. The wooden superstructure over the canal feeder on the 32d mile, Blacklick creek on the 43d, Big Walnut on the 46th, and Alum creek on the 50th mile west of Zanesville, have all been finished. The superstructure over the canal at Hebron will probably be completed this year, and the timber for that over the Scioto will be got out this winter. The superstructure over Little Darby, which was damaged in April last by a tornado, has been repaired and strengthened by additional bracing. The first stratum of metal is in course of preparation to cover the road between the 22d and 32d miles, inclusive, west of Zanesville. Measures were taken to have this metal prepared and put upon the road by the 1st of August last, but the efforts of the contractors were defeated by the prevalence of disease and the increased demand for labor. The second stratum of metal was to have been put on by the 1st of last month, but the distance of the stone to constitute this layer, added to the causes already adverted to, rendered this impossible. The third and last stratum of metal is undergoing preparation to be placed upon the road as soon as broken, between Zanesville and the 21st mile west from thence, inclusive. The time limited by the contracts for completing this part of the road was the 1st of August last, but some of the causes which operated against the advancement of the road in the neighborhood of Hebron have operated to its prejudice in this. It is confidently anticipated, however, that these 21 miles will be finished within the present year, when they will be turned over to the State. The grade has been completed by this time as far as Columbus, by which there is a saving of five hours in the passage of the mail between Zanesville and Columbus, which commenced running on this road in July last. The clearing and grubbing will most likely be completed as far as Springfield, 43 miles west of Columbus, by the end of the present month.

Cumberland road in Indiana.—An officer of engineers is at present engaged in making an inspection of the road through this State, and his report will be laid before you as soon as received, the report of the superintendent of the eastern division being of a character so general as to render it impossible to get at the exact condition of the road. The western division, beginning at Indianapolis, will soon be in a travelling condition for a distance of 33 miles west; the grading, bridging, and culverts being finished by this time, excepting the bridges at White river on the 1st, and Mill creek on the 27th mile; both of which will, most likely, be finished by the end of the year. The contracts for the present year, on the western division, are for such work as was deemed necessary to bring the road into immediate use as far as the western boundary of the State. These contracts, therefore, embrace the entire distance from the 34th to the 71st mile, inclusive; and the works provided for by them have progressed in a manner altogether satisfactory to the superintendent. When these contracts shall be completed, carriages will be able to travel, with but trifling interruption, from Indianapolis to the eastern boundary of Illinois.

Cumberland road in Illinois.—A belief was induced in the early part of the year that the affairs of this part of the road were conducted in a manner not likely to be productive of results desired by the government; and, therefore, an officer of engineers was instructed to make an inspection of the road and its concerns, and to report the result for subsequent action. Before the inspection was made, however, a direct charge was preferred, from a source that seemed to require consideration, impeaching the moral character of the superintendent in a particular that could not well be true without being accompanied by dereliction of official duty. It was, therefore, deemed necessary to suspend the superintendent till the facts in the case could be ascertained. An investigation was had of the affairs of this road, and it is shown that a state of things existed which rendered any progress in the way of extension, during the present year, totally inconsistent with a proper regard for the public interest; and it is not perceived how anything further can be done till the blunders, but too palpable on almost every part of the road, shall have been repaired, and a system established which will prevent their recurrence, and restore a wholesome state of things on this important national work.

Cumberland road east of the Ohio.—The repairs of this part of the national avenue have progressed well. In *Maryland*, three thousand two hundred and thirty-seven rods have received the entire covering of stone, and are completed; two thousand eight hundred and thirty-four rods have received a covering of nine, sixteen hundred and ninety-seven of six, and twenty-seven of three inches of metal. Three thousand nine hundred and eleven rods have been graded and are ready to receive the covering; and for which there are, on the line of the road, six thousand one hundred and thirty-eight perches of broken or prepared, and upwards of seven thousand perches of rough stone. In *Pennsylvania*, six thousand nine hundred and ninety-three rods of the road have been completed; ten thousand and ten rods have received a covering of nine inches, six hundred and ninety-two of six, and three thousand five hundred and ninety-five of four and a half inches of metal. Four hundred and ninety-four rods of the road are graded and ready to receive its cover; and there are near the road side 7,611 perches of prepared, and 2,236 perches of rough stone. In *Virginia*, eight hundred and twelve rods have been covered with four and a half inches of metal, and one hundred and seventy-six with three inches. Eighteen hundred and fifty-five rods of the road have been graded, and are ready for receiving the metal; and for which there are, on the line of the road, eight thousand three hundred and fifty perches of prepared, and twelve thousand six hundred and forty-five perches of rough stone. Besides this, there is a considerable quantity of stone out at the different quarries, which will be hauled to the road and prepared during the winter. Five thousand four hundred and fifty-three cubic yards of masonry have been constructed on different parts of the entire road. The new location to turn Wills's mountain has been opened, and considerable progress made in the bridge to cross Wills's creek.

An examination was made of the Cumberland road east of the Ohio in 1827, for repairing it upon the

plan of its original construction, when it appeared that 75⁵/₈ miles of the old pavement were in good order, and required three inches of broken stone for a covering to restore it to its primitive state; estimated to cost \$3 75 per rod. That 32³/₄ miles required four and a half inches of stone, and 21¹/₂ miles required six inches of stone, broken to four ounces in weight; and that the masonry might cost eleven thousand dollars; and the whole road, thus repaired, would cost \$230,274.

In February of 1826 it was estimated that the sum of \$278,983 would be sufficient to repair the whole road upon the McAdam plan; and in May, 1827, a period of sixteen months, the superstratum or cover of reduced stone had been worn and washed away to an extent almost incredible, and proved that too great a reliance was placed upon the layer of large stone, as there were not so many of them of as good a quality as was first supposed. To have effected the same repair in 1827, as was contemplated in 1826, would have required an additional sum of \$50,000, making \$328,983 necessary to repair the road, upon the best information to be obtained at that period. The utter destruction of the road was foreseen at that time, unless measures were taken to repair it thoroughly; it being then in a "most wretched" condition.

In July, 1832, it was determined to repair the road effectually from end to end, and cede it to the respective States through which it passed, after which the repairs were to be met by the tolls collected from the travelling on it.

The system adopted was that extensively used in England, and known by the name of its inventor, McAdam. The condition of the road at this period made very extensive repairs necessary, commencing from the grade, there being neither side drains, ditches, nor culverts, for draining the water; presenting no better condition for the basis of repairs on the McAdam system than what is called a "rough grade," with the large bridges.

Rather than make a partial repair by distributing the sum appropriated over the whole line of 132 miles, the parts through the mountains being in the worst condition, and, from the face of the country, most difficult to travel, were first commenced; the supposition of finding good stone in the bed of the road, wherewith to make "McAdamized metal," proved fallacious; not a perch was found through the whole mountain district, the bed being composed of soft sandstone. This, when broken to four-ounce pieces, and used for a covering, is, in the course of three months, reduced to sand, and washed by the heavy rains from the road into the ditches and drains, making it worse than useless to depend upon any of the varieties of sandstone. Under these circumstances but one course was left, and that was to procure the only suitable material the country produced—*limestone*. The natural position of this stone is under the sandstone, and found only in the lowest valleys, often in the beds of creeks, covered with several feet of earth, and distant from the line of the road. Through the mountains it is found in few positions. The expense of repairing the road with a good material, and the only one of this character found in the country, is far greater than anticipated, before these facts were known. Another heavy item in the expense of repair is the condition of the masonry; this having been exposed for a long time to the weather, without coping to throw off the rain and snow, is now in a dilapidated condition, requiring a considerable portion to be renewed.

Under these circumstances, the cost of putting the road in such a condition as will justify toll being exacted is so far beyond that at first anticipated as to make it proper to draw the particular attention of Congress to the estimate for the year, based upon the facts herein stated. It will be perceived that the sum asked for the service of the year is to finish all that part lying between Cumberland and the Monongahela river, and commence that part situated between this river and the Virginia line, and to finish the sixteen miles in Virginia; making the sum required to repair the whole road, on the McAdam plan, not less than \$645,000, of which the resources of that region of country will advantageously admit of \$300,000 being expended during the year.

Should it, however, be the determination of Congress to make a partial repair of this great national line of communication between the western waters and the Atlantic, the estimates would be materially varied. Leaving the masonry in its present ruined state, constructing no more culverts to throw the water under the road, abandoning the McAdam plan of repair, and merely opening the ditches and drains, and to restore the grade with earth, the cost would be, for the part between Brownsville and West Alexandria, upon which, as yet, nothing has been done, 42 miles

.....	\$50,000
For the 16 miles in Virginia, (finishing the masonry on Wheeling Hill).....	20,000
For the first 10 miles in Maryland	25,000
For the remaining 22 miles in Maryland.....	22,000
For the part through Pennsylvania, heretofore partially McAdamized, 41 miles	30,000
	147,000

This, however, effects nothing more than making a clay road, by no means suited to the immense travel passing the mountains by this route, and when finished soon destroyed by the rains which would wash the earth from the face of the road into the valleys.

To use stone found on the roadside is, as before remarked, worse than useless, the expense of applying it being very great, and when applied soon ground to sand and washed away. Hence, it will be far better to apply the sum that may be appropriated for a partial repair to form a clay road over the old bed than attempt to apply sandstone that is no better, costs more, and is as soon washed away.

The road repaired in this manner will not justify tolls being exacted, as in the fall and spring of the first year it will be next to impassable, and good only for the first two or three summers. Another mode of repair might be adopted, viz: that of restoring the grade by breaking up the sandstone to twelve-ounce pieces and covering it with earth. The result of this would be, after a year or two, when the earth had washed from the surface, an irregular mass of rough stone much like the road in its present condition. The cost of this might be \$200,000.

A more particular estimate for these partial repairs is not submitted, as they cannot be recommended, and the necessary information has not been collected to prepare one.

Road from Columbus, Georgia, to Line creek, Alabama.—This road has been located, after a careful examination of the country through which it passes, and its construction will be prosecuted with as much despatch as circumstances will permit. The greater part of the road is in a district of country entirely uninhabited. This will render it a matter of some difficulty to procure labor and supplies; but the depart-

ment has the assurances of the agent that every effort will be made to complete the road as speedily as possible.

Road from Detroit to Chicago, Michigan.—The contracts for the construction of this road, entered into last year, extended as far as the 132d mile west from Detroit. The contractors were actively engaged on the 30th September, and hopes were entertained that they would be able to complete their engagements by the 30th October. Additional contracts were made in June last for different parts of the road as far as the 157th mile. Upon examination, it was found that, between the 150th and 157th mile, the country is extremely broken, and the travelling not only difficult but dangerous; it was therefore deemed advisable to contract for this part of the road this year, and to postpone until the next the portion between the 132d mile, where the contracts of last year terminated, and the commencement of the broken district. This has been done.

Road from Detroit to Saginaw.—The contracts entered into last year for the construction of the Saginaw road will have been complied with, it is believed, before the termination of the present fall. Twelve additional contracts for making eight miles of this road, ending with the first half of the 65th mile, were made last June. They provide for the completion of that part of the road by the 1st of September next, and no doubts are entertained of the contractors being able to comply with their engagements on this and the Chicago road.

Road from La Plaisance bay to meet the Chicago road from Detroit.—Twenty-seven miles of this road have been put under contract; four miles were completed on the 30th of September; eight were expected to be finished by the 30th ultimo. The contractors are laboring on twelve more, and hopes are entertained that all will be done by the 31st of January next.

Road from Detroit to the mouth of Grand river.—On ten miles of this road the first class of operations, consisting of clearing and grubbing, excepting on one mile, will be completed by the close of the season. The appropriation now asked for is intended for the continuation of the plan at present adopted.

Road from Detroit to Fort Gratiot.—This road was put under contract last season to its termination, and would have been completed before the close of this had not some sections of it been under water for a great portion of the time, thereby preventing their being worked upon. It will, however, be made passable by the end of the year.

Northern boundary of Ohio.—The officer charged with collecting data preparatory to the adjustment of this line has been engaged with an assistant in a reconnaissance to determine the stations and points where the more important instruments are to be used, and to ascertain more accurately the extent and nature of the duty required by the law creating this service. This was deemed necessary before ordering all the instruments; and accordingly complete sets of observations were made for the determination of the latitude and longitude at and near the four principal points, viz: on Gull or Ship island, in Lake Erie; at the north point of Maumee bay or Bay Point; the south bend of Lake Michigan; and near the same parallel on the Mississippi.

Military Academy.—This institution continues to prosper; and for more particular information respecting it I beg leave to call your attention to the report of the board of visitors, herewith, marked H. An appropriation was made at the last session of Congress for the erection of two buildings much needed at the academy. One is for a place of divine worship, the other for the exercise of the cadets in the winter and in times of bad weather generally. On drawing up plans, it was found that they would exceed the amount appropriated; and it was, therefore, deemed proper to defer their erection till the facts could be submitted to Congress, and its further action in the matter be had. An estimate exhibiting the difference of cost will be submitted.

Board of engineers.—The members of the board of engineers have been engaged in making inspections of the various works in the vicinity of their respective stations, in addition to the specific duties with which they are individually charged.

Office of the chief engineer.—Besides the current business of the office, the nature of which remains the same as heretofore, a number of the works under the department have received my personal attention. In the course of the year I made, in accordance with the regulations, a tour of inspection, embracing the Cumberland road in the States of Maryland, Pennsylvania, Virginia, and Ohio; the harbor improvements on the south shores of Lakes Erie and Ontario; and the works of fortifications at Hampton Roads, Pea Patch island, New York harbor, and Narragansett Roads.

In conclusion, I would respectfully renew the suggestions offered in my previous reports that the means of the department are entirely inadequate to meet the numerous calls upon it for officers. Permit me, therefore, to call your attention again to the subject of an increase of the present corps of engineers, agreeably to the plan heretofore recommended; it is deemed a measure of indispensable necessity for the public interest.

All of which is respectfully submitted.

C. GRATIOT, *Brig. Gen. and Chief Engineer.*

HON. LEWIS CASS, *Secretary of War.*

A.—Table exhibiting the fiscal concerns of the Engineer department for the year ending September 30, 1833, in which the funds that had accrued within that period, and the manner of their accruing, are stated and accounted for by showing their application; and showing also the amounts expended upon the several works under construction.

Designation of the appropriations and the objects to which they are applicable.	Available for 1833, and whence derived.			Amounts available accounted for.			Aggregate accounted for, corresponding with the aggregate available.
	From appropriations for 1833.	From balances remaining undrawn in the hands of agents on the 30th of September, 1832.	Aggregate available.	Amount applied, corresponding with the amount of accounts rendered for settlement to the 30th of September, 1833.	Amount undrawn from the treasury October 1, 1833.	Balances in the hands of agents October 1, 1833.

D.

ERIE, PA., October 18, 1833.

SIR: In compliance with the orders and regulations of the Engineer department, the following report in relation to the public works of internal improvements on the south shore of Lake Erie is most respectfully submitted:

Black Rock harbor, N. Y.—The money which has been applied to the works this season has been principally in procuring stone for the mole on Bird island, and in repairing the traverse pier. No report has been made by the superintendent of the progress and condition of the works. I have been informed that a plan has been made out for enlarging or extending the works, and sent to Colonel Totten, the cost of which is estimated at \$20,000. Information through that channel to the department may be expected.

Buffalo harbor, N. Y.—The public works for securing the harbor at Buffalo have the appearance of great strength and durability. The importance of this port may be learned from the collector of the customs. The schedule of shipping belonging to this port, and the amount of exports, will show the great amount of business transacted. The whole front wall of the mole on the south side of the harbor, together with the coping and flagging, are completed. The new light-house on the mole head is complete in every part. An estimate of funds required for 1834 accompanies this report.

Dunkirk harbor, N. Y.—This harbor is formed by two points projecting into the lake; the western pier extends into the lake 416 yards; for extending the pier 158 yards further, and constructing the eastern breakwater, an estimate accompanies this report. The works which have been already constructed stand well and in good condition; the piers are all filled in with stone, level with the top timbers, based upon solid rock, and planked. The pier has been extended this season 113 yards. This harbor has at its entrance 12 feet of water, and from 12 to 15 on the anchorage.

Presque Isle harbor, Pa.—The north breakwater of this harbor is now connected with the main land of the peninsula, and filled in with brush and stone; it has been extended this season 400 yards. The stone in the piers have settled about two feet on an average, the planks have been taken off, and the piers filled to a level with the top timbers, and replanked as far as the old ones would answer; the whole will be covered as soon as plank can be obtained. The depth of water has been increasing in the channel every year from the commencement of the works; 12 feet of water may be carried the whole length of the channel to the entrance of the bay, and then 9½ feet to the borough pier, which is one and a half miles from the entrance. This harbor is capacious, when compared with others on this lake, and very important to the country. It is the most suitable point for a naval station on the south shore of the lake. These works, as soon as

practicable, should be placed on a permanent footing. In 1830 a breach was made through the south pier at its junction with the south breakwater, but as no serious injury has been felt and the channel has continued good, it has remained in the same situation ever since. The deep basin has, however, been worn in the channel, and the standing work endangered by being undermined. Colonel Totten, of the engineer corps, recommends its being filled in without delay. The appropriation will be only sufficient to secure the other part of the works, leaving this until further appropriations are made. To strengthen these works, large quantities of stone and brush are required to be placed on each side of the piers and breakwater, the whole length, to prevent them from being undermined, and the sand from being driven through by the current and waves. An estimate is made out for this purpose, likewise for closing the breach at the junction of the south breakwater and pier, and filling in the deep basin worn by the current surrounding this breach. The breach at the head of the peninsula, (five miles from the entrance,) which was mentioned in my last annual report, has been thoroughly examined by Colonel Totten, and it is presumed that some plan will be recommended to prevent its increase.

Conneaut creek, Ohio.—These piers extend into the lake 415 yards. The depth of water in the channel at its shoalest place is eight and a half feet. The stone in the piers have settled very considerably, and must be filled in even with the top timbers; some large stone are required around the head of the piers, and on the outside mixed in with brush. An estimate of the expense accompanies this report. 202 yards of pier have been constructed since the 30th of September, 1832. A simple dredging machine has been built this season for deepening the channel, which is now in operation and doing well, removing from six to eight cords per day of hard clay pan.

Ashabula, Ohio.—These piers extend into the lake 428 yards; if they were extended 150 feet further, and spread so as to give additional width at the entrance, greater safety would be given to vessels entering the harbor, especially when the wind and waves are high. A rock lies across this channel about 200 yards from the head of the pier, and extending 200 feet in length, six and a half feet below the surface of the water, the whole width of the channel. The machinery for cutting up this rock was in operation when last there, and worked to good advantage. The superintendent informs me that the chisel has again failed, but he is in daily expectation of a very substantial one from Pittsburg. I am fully in the belief, notwithstanding the bad success this season, that the plan is a good one, and that the rock will be removed at a less expense than any other plan suggested. An estimate accompanies this report for extending the piers, and for filling in where the stone have settled.

Cunningham creek, Ohio.—This is an open pier extending into the lake, and bridged. The appropriation of \$500 last winter appears insufficient to complete the work or pier head; more money will be required. The pier head was constructed on a larger scale than the plan laid down, and more stone and timber were required than was called for by the former statement. An estimate for completing this pier and enlarging the works accompanies this report.

Grand river, Ohio.—These piers extend into the lake 480 yards, and will admit vessels drawing 12 feet of water, a greater depth than could have been wished, as greater quantities of stone are required to fill in the piers, and to secure them in their place against the effect of the current. Large quantities of stone and brush are required to be placed on each side of the piers, the whole length, to give them additional strength. Estimates are therefore made out, and accompany this report.

Cleveland, Ohio.—The piers at this harbor extend into the lake 525 yards, giving a depth of water in the channel of eleven and a half feet at its shoalest place. This harbor is one of great importance; it must, from its local situation, be the great centre for business on the lake shore for the State of Ohio. The Erie and Ohio canal enters this harbor, extending 330 miles to Portsmouth, at the mouth of the Scioto river. The quantity of business transacted at this place is shown by the collector of the customs in a document herewith transmitted. Large quantities of stone and brush are required to secure and strengthen these works. An estimate for that purpose is made out, and accompanies this report.

Black river, Ohio.—These piers are extended into the lake 417 yards, with an opening of 200 feet; the shoalest place in the channel is seven and a half feet. The works stand well. The stone in the piers have settled nearly two feet on an average; a quantity of stone is required to fill them even with the top timbers. A deposit of stone and brush on the outside of the piers would give additional strength to the works, and prevent the sand, which is constantly accumulating, from being driven through the piers. This being effected, a brush would be formed alongside the piers, and thereby a strong barrier erected for the preservation of the works. The western pier has been extended this season 30 yards, filled in with stone, and planked; and 150 yards of the eastern pier, which was in an unfinished state, have been completed. The eastern pier is to be extended 30 yards further, agreeably to the original plan. A dredging machine has been constructed for deepening the channel, by removing the hard clay pan at its bottom, and is now in operation, and works to good advantage.

Huron harbor, Ohio.—The depth of water in this harbor at its shoalest place is eight feet. The works are in good condition. Some considerable stone will be required for filling the piers, where they have settled, even with the top timbers, and quantities of stone and brush on each side of the piers, to give strength to the work, and prevent the sand from being driven through the piers into the channel. The entrance to this harbor is only 140 feet; this is too narrow for safety. If these piers were extended into the lake 200 feet further, on an angle that would give an additional width of 100 feet, the entrance into the harbor would be more safe, and damage less frequent. An estimate for repairing and extending these works accompanies this report.

It gives me much pleasure to communicate to the department the result of the experiments made in constructing harbors on the south shore of Lake Erie. The extending of parallel piers from the mouths of rivers across the beach and sand-bars into the lake has exposed the sand to the action of the current, by the force of which the bars have been removed; and in no instance has it failed, unless interrupted by rock and clay pan, of giving sufficient depth of water for the largest class of vessels navigating the lake, thereby rendering it easy to obtain a safe harbor at any of the given points. It was problematical at the commencement of these works what would be the result of the first operation, but experience has shown that could the effects have been foreseen, the same plan would have been pursued; of course, no money has been lost in experiments. These works will be kept in repair, and strengthened by enlarging the base on each side the piers with brush and stone, and obtain in a few years a stable foundation. To secure this most important end, they will require constant watchfulness and annual appropriations, but small when compared with national advantages. Beacon light-houses to all the harbors on the south

shore of Lake Erie are required for the safety of navigation. Estimates have been heretofore made out and transmitted to the department.

Very respectfully, your most obedient and humble servant,

JOSEPH D. SELDEN, *Agent.*

Brigadier General C. GRATIOT, *Chief Engineer.*

OFFICE OF IMPROVEMENT OF NAVIGATION OF GENESSEE RIVER AND BIG SODUS BAY,
Geneva, New York, October 6, 1833.

Annual report of the state of the works constructing under the law of Congress for the improvement of the navigation of Genesee river, and for removing obstructions at the entrance of Big Sodus bay, on Lake Ontario, New York, for the year ending September 30, 1833.

The materials used in the construction of these works, to wit, timber, iron, and stone, and the form of the piers, to wit, a succession of cribs united, being the same as those used and applied in previous years, they need not be again described in this place, save a reference to the plans.

At Genesee river the quantity of work accomplishing and to be finished this year (1833) amounts to twenty-eight piers or cribs, each 30 feet in length and 20 feet wide, sunk and extending from the existing range of piers into the lake at the mouth of the river in a depth of 12 feet water, the extreme crib being 30 feet square, the average height of these cribs from the bed of the lake to the top of the piers being 17 feet. The whole length of the pier, including that to be finished this year, amounts to 4,712 feet.

At Big Sodus bay there have been constructed and sunk, during the same time this year, twenty-seven similar cribs or piers, of the dimensions of 30 feet by 18, in 12 and 13 feet of water, the cribs averaging a depth of 18 feet from the bed of the lake to the top of the pier. The whole length of the pier, including that to be finished this year, amounts to 5,378 feet.

The works at both harbors standing firmly, and answering the purposes for which they are erecting. So far as the nature of the respective beds of the lake have effected, that at Genesee river, being movable sand, is cleared away from seven to twelve feet, the depth of fourteen feet being the object required; and that at Sodus bay, being sand and gravel and pebbles, has been washed off from seven to nine feet, the depth of fourteen being also the object here required.

The expenditures for materials and workmanship from the appropriation of \$15,000 for each harbor are exhibited in the accounts and vouchers in the Engineer department.

It was my expectation last year that it would not be necessary to extend the pier-work of these improvements any further into Lake Ontario than will be finished in the present year. Some changes in the form of the shoals near the piers, and a movement of sand towards their extremities, make it necessary to extend the piers somewhat further, to wit: at Genesee river the movement of the shoal near the west pier has occasionally deposited at the end of the pier, but the deposit has not been permanent. To insure safety in this matter, an addition of two hundred yards of pier will insure a fourteen-foot water navigation, which will involve an expense of \$15,000. Such have been the advantages to the navigation by these piers, that it is the general wish to make the channel safe and easy for any depth not exceeding sixteen feet of water, which would involve an expense of \$7,500 in addition, as the estimates exhibit.

At Big Sodus bay the movement of sand and gravel on the shoal between the west T and the shore adjacent to the light-house make it desirable to extend the west T about one hundred yards, and the east T about fifty yards, which will involve an expense of \$8,000, as the estimates exhibit.

By the accompanying sketch it will be seen that Point Charles is connected with the main land by a narrow isthmus. From causes that have most probably originated in the reaction of the waves about the Sodus piers, the northeastern projection of Point Charles, and the shore continued therefrom to the isthmus, have been much abraded. Before the piers were commenced, the rolling of the sea expended its force upon the Long Point beach within the bay. Since the works have been constructed, the reacting waves from the sides of the piers have commingled themselves with the currents that set east or west, as the winds have influenced them, and expended some of their force upon Light-house Point and Point Charles; the latter being affected because the prevalent winds are from the west. Light-house Point has been protected by a pier, which, although too small, evidently shows its good effects in protecting the shore there. I propose a similar protection at Point Charles; and as this promontory lies immediately adjacent to the low part of the narrow isthmus, I propose that a range of small piers, six feet by four, be made to cover the northeast point and extend to the isthmus, and thus effectually protect that shore and prevent a breach through to the bay, which is now seriously threatened, and which, if permitted, might change the channel from the lake into the bay. By an estimate it will be seen that that work would cost \$8,000.

Conformably to what has been stated in previous annual reports upon the removal of obstructions at Sodus bay, I now proceed again to refer to that subject. The bed of the lake between the piers at the entrance of this harbor is sand, gravel, and pebbles, forming just below the surface a hard pan, a connexion aided in its formation by a deposit of iron, and is of a thickness between one and three feet; through this pan I have been in the habit of driving piles, consequently the pan can be broken through, and enough of it turned over and taken away to secure a channel for a navigation of fourteen feet of water where the least depth is now nine feet. The machinery which I recommend to apply to this work, is to be driven by a twenty-horse power steam-engine, acting upon an iron plough running in an iron frame attached to iron axletrees and iron wheels, to be moved over the bed of the channel by gauging the plough to the requisite depth; and after running out one furrow, and dredging out the excavation, to regauge the plough to the additional depth of another furrow, until the channel is opened to five feet below the present surface, on a line of 500 yards in length and 20 yards wide, which would leave banks on either side of the channel 80 yards wide, a pan sloping up to the base of the piers.

The accompanying plan will show the construction of the plough, and the estimates will show that the expense of this work will be \$14,000 for the first year, and \$6,000 for the second year. In my opinion, the work can be done in two years.

When these harbors were commenced, they were deemed experiments. To produce a conviction of their practicability and usefulness, the cheapest and most temporary materials have been applied; the result has been thus far satisfactory. The material chiefly used at Genesee river and Sodus bay has

been timber secured by iron bolts and oak treenails, and ballasted with stone. This work below the surface of the water will endure a great length of time; but that which is above water, and alternately wet and dry, must of necessity decay in a few years. To render, therefore, these works permanent, it will be necessary to apply a structure of stone above low water.

In observing the action of the waves upon structures intended to impede their motion, I do not think that slopes form the best breakwaters, because they serve to lead the surge. Perpendicular walls aid better to resist the action of waves than slopes, for in such cases I have noticed that the violence of the coming surge is in part expended upon the retreating volume of water that is below the surface adjacent to the upright wall of timber, so that the force of the wave is at least divided between the "undertow" and the face of the structure.

I would therefore recommend that the works at Genesee river and Sodus bay be permanently secured by perpendicular walls of stone constructed upon the present piers, commencing below the lowest stage of water, and extending four feet above the surface of high water; using stones of large dimensions for the faces exposed to the waves, clamping them together with copper; using small stone for the inside faces, and filling the space between the faces with fragment stones, and covering the whole with large stone. The quarries on Genesee river and near Sodus bay can afford an abundance of materials. I subjoin an estimate for such a work at both harbors.

1, 000 cords of building stone, in lengths of not less than four feet, at \$7.....	\$7, 000 00
800 cords, not less than 2 feet, at \$5.....	4, 000 00
3, 000 cords of fragment stone, at \$3.....	9, 000 00
20, 000 pounds copper bolts, at 25 cents.....	5, 000 00
Workmanship and contingencies.....	13, 500 00
For Big Sodus bay.....	38, 500 00

The greater facility of procuring stone upon Genesee river would diminish the item of stone \$4, 000, so that the expense for Genesee river would be..... 34, 500 00

Respectfully submitted.

J. G. SWIFT, *Agent.*

Gen. CHAS. GRATIOT, *Chief Engineer, Washington, D. C.*

P. S.—I append a letter from the ship-owners and captains at the port of Genesee.

Estimate of funds requisite to conduct the United States pier work at Genesee river, New York, for the year 1834.

J. G. SWIFT.

PORT OF GENEVA, N. Y., *September 30, 1833.*

SIR: On the eve of your departure for the seat of government, we, the residents, ship-owners, and captains at this port, are desirous of expressing our approval of the operation of the piers now under progress; and, at the same time, we give our testimony to the improvement that has already been effected in the navigation of the channel to the lake. We beg, respectfully, to suggest it as our opinion that the works ought to be so extended as to give a depth of 16 feet of water; and we are strongly impressed with the conviction that if this could be accomplished in one season, it would be done at considerably less expense than the same object could be attained in more distant appropriations.

We take this opportunity to express our good wishes to yourself, and are, sir, your obedient servants,

FREDERICK BUSHNELL.
JNO. MONON.
G. C. LATTA.
D. S. HOLDEN.
DAVID WHITE.
AMOS EMERSON.
JAMES CURRIER.
HENRY BENTON.

Gen. J. G. SWIFT, *Geneva, N. Y.*OSWEGO, *October 9, 1833.*

SIR: I have the honor to forward herewith my monthly and quarterly returns due at this time, and also my annual report of the progress of operations since January 1, 1833, prior to which time I have no data left me by the former agents on which to found a narrative.

The operations since I took charge of the work are comprised in the following particulars, viz:

1st. Repairing the damages sustained by the west pier last winter. In doing this I followed the plan suggested in Captain Smith's letter of the 15th April last, and referred to in mine of April 22.

2d. Completing the counterfort to the east pier, (marked B in the accompanying sketch of the piers,) which was built up nearly to the water's edge last fall by Lieutenant Tompkins.

3d. Building the counterfort (marked A) to support that part of the west pier which was injured last winter. This is completed now with the exception of planking. I have purposely delayed completing it in order to give the man who furnishes the stone for filling it (who is also the contractor for supplying

stone for the mole) an opportunity of furnishing them as they come from the quarry with the large stone, by which means I get them cheaper than I could if the quarry had been worked on purpose for them, but principally for the purpose of letting it get perfectly and firmly settled before building the part above water.

4th. Prosecuting the construction of the stone mole for the protection of the west pier. This is under contract to Mr. H. I. Cary, of this place, to the extent of the appropriation, to be completed this fall. The season has been boisterous to an unprecedented extent. There has been on an average this summer (or since the contract was made) scarcely six days in a month in which scows could go out with stone. In consequence of this it will be late before the contract will be completed; but as the principal part of the stone which remains to be delivered is to be placed above the water, and can be lifted over the pier with cranes even in rough weather, I confidently anticipate its completion this fall. In the accompanying draught of "profile No. 1," two irregular lines drawn across the profile of the mole represent sections of the present mole as it will be when the stone contract is completed. The upper one represents a section anywhere between the pier head and the counterfort, (marked C₁) which is the part most exposed to injury; the lower one represents a section anywhere from that point to the west end of the pier.

Agreeably to your directions I visited Buffalo in July last for the purpose of collecting such information in regard to the public works in that harbor as might be applicable to the construction of similar ones in this harbor, where I met by appointment Colonel Totten, then inspecting those works. It is in accordance with his suggestions that I have prepared the accompanying estimates and drawings of works which are deemed necessary for the permanent security of this harbor.

For securing the present structures, \$38,569, the amount of the estimate for finishing the mole according to "profile No. 1," is required. The rock bottom precludes the use of piles and makes it necessary to have a more extended base. This mole is deemed a perfect security as long as the timber remains sound; but to make it permanent, the estimates for finishing the west pier according to "profile No. 3" are submitted.

I also forward an estimate and plan for the foundation of a light-house to be placed at the entrance of the harbor. I presume the drawing will sufficiently explain the manner in which it is proposed to build it. The crib work is intended to be filled up with broken stone and fine gravel, and grouted. The estimate for the light-house itself is founded on the actual cost of the one at Buffalo, and therefore the different items are not enumerated.

The reasons for selecting the end of the east pier for the location of the light-house are: 1st, the water is not so deep there as at the end of the west pier, and the bottom is better, being flat rock, as far as I have been able to ascertain; (there is a quantity of loose stone on some part of it which it will be necessary to remove before a thorough examination can be had;) 2d, it is more accessible in bad weather; and, 3d, there are five acres of ground and a house belonging to the United States for a light-house keeper on this side and near the pier.

It is proposed to get the limestone estimated for at Chammont bay, near Sackett's Harbor, by contract, and the other stone from the quarries heretofore worked adjacent to the pier. These quarries are on the State lands, and I have obtained from the State the exclusive privilege of quarrying stone in them for the public works. I would therefore suggest that it will probably be cheaper for me to work these quarries myself than to get these stone by contract, for I can work them as cheap as a contractor can, and what would be his profits in one case would be saved to the government in the other. Add to this the advantage of having everything done just in the manner and at the time it is wanted to be done, which can never be the case with a contractor.

The information which you directed me to obtain respecting the tonnage of the port, &c., &c., will be forwarded in a few days, as soon as the collector has completed the examinations necessary for obtaining it. I send enclosed in a roll with the drawings a map of the village of Oswego.

I have the honor to be, very respectfully, your obedient servant,

R. C. SMEAD, *Lieut. Ath. Art. on Eng. duty.*

Gen. CHARLES GRATIOT, *Chief Engineer, Washington, D. C.*

E.

FORT ADAMS, *Newport Harbor, November, 9, 1833.*

Sir: In compliance with the tenor of a letter from the Engineer department of June 24, I have visited and inspected the following works of harbor improvements on the shores of Lakes Ontario and Erie, namely, Oswego, Big Sodus bay, Genesee river, Black Rock, Buffalo, and Dunkirk, in the State of New York; Erie, in the State of Pennsylvania; Conneaut creek, Ashtabula creek, Cunningham creek, Grand river, Cleveland harbor, Black river, and Huron river, in the State of Ohio. And in further compliance with that letter, I have now the honor to submit the following report on the actual condition of those works severally, and on "the amount of funds required to complete each according to the present plans, or according to such modifications of them as may seem proper to attain the end contemplated in constructing these works."

I may here remark, once for all, in relation to a "project for keeping them in good order and repair after they shall be finished," which I am required to submit, that no better mode has occurred to me than to commit them severally when finished to the supervision of the collector of the customs, inspector of the revenue, or light-house keeper, with instructions to report at stated times as to their condition, to keep a strict eye to their preservation from wanton injury or depreciation, to apply immediate repairs to slight injuries, and to notify the department promptly of all serious accidents. An increase of salary accompanying these new duties would give them an attractive character, and insure their faithful observance.

Very respectfully, your most obedient servant,

JOS. G. TOTTEN, *Lieutenant Colonel of Engineers, Brevet Colonel.*

Gen. C. GRATIOT, *Chief Engineer, Washington, D. C.*

Oswego harbor, N. Y.—The mouth of the Oswego river is an open roadstead, having no shelter from the dangerous winds which blow from the northern quarter; all winds from west round through the north to northeast driving the waves directly into the roadstead.

Two opposite, low, sandy points make out from the shores at the immediate embouchure, narrowing the channel somewhat and affording a partial shelter within. This sheltered space is, however, very circumscribed, quite shallow, and the access to it against a current that is at times rapid; so that this inner space very imperfectly answers the purpose of a harbor.

To obtain a quiet and sufficiently capacious anchorage, a pier beginning about 1,200 feet from the mouth of the river has been run out from the western shore, first north 230 feet, then north about 55° east, 1,155 feet to the channel. The channel being 250 feet broad, a pier to the east thereof continues on the prolongation of the west pier (N. 55 E.) 644 feet, and thence in a southeasterly direction 222 feet, to the shore near old Fort Oswego. These may be designated *harbor piers*. From near the eastern extremity of the west harbor pier, and at right angles thereto a *channel pier* runs a distance of 126 feet into the lake. These piers (see plan herewith) vary in their width at top, according to their situation, from 24 to 27 feet. They are built of side and central timbers, running longitudinally and connected by numerous cross-ties; the sides next the lake, and the top being covered with planks and the interior space being filled with stones. A number of buttresses, similar in construction to the piers, have been placed against the inner side of the harbor piers, to strengthen them against the shock of waves; and with a similar object, stones have been thrown against the lake side of the west harbor pier so as to form a mass rising next the pier, near to the surface of the water, and having a base of from twice to twice and a half the altitude.

The effect of these works just described is to give a capacious harbor, perfectly safe in all winds, of easy access, and deep channel and anchorage.

During the present year the operations on the harbor must be confined to finishing the buttress marked *b*, erecting the buttress *a*, so as to occupy all the space between the buttresses *c* and *d*, in consequence of the force of the sea having curved in the pier opposite this space; repairing some other damages done to this pier and adding to the quantity of stone thrown against the lake side of the west pier; all these matters involving an expenditure of about \$8,000.

Although the development of the works for the formation of the harbor is complete, much remains to be done to give them present stability, and still more to give them permanency. The effects of the sea, urged by violent storms, upon the west pier, have been already noticed; planks were torn off, timbers displaced, and even the whole mass of the pier, in one place bent inward. All further action of this sort must be prevented by adequate provision in the first place, otherwise extensive annual repairs will be called for, and these annual repairs will become more and more difficult and expensive. A large deposit of stones has been made on the outside of the west harbor pier, but as the top of this mass scarcely reaches to the surface of the water, the wave rolling up the slope impinges with great violence upon the whole of the upright and uncovered portion of the pier; the wave should either be carried by the slope towards the top, and sometimes, no doubt over the top, or the pier should be raised so high, the outer surface being everywhere sloped, that the wave cannot reach the top. The first should be the preparatory, the second the ultimate profile of the pier. These profiles are marked in the drawing No. 1 and No. 2. To give to this pier the form of No. 1, will cost, by the estimate of the agent \$38,569 00

The entrance to the harbor is now but little benefited by the light-house on the hill near Fort Oswego. This leads vessels towards, but does not show the entrance into, the anchorage. Either of two modes may be adopted; a beacon or small light may be placed at the entrance, and both this and the present light be kept up, or a lofty permanent light-house may be constructed at the pier, abandoning the old one. From the actual condition of the latter, this mode may in all respects be the most economical.

The position for a light-house will be just within the terminating buttress at the western end of the east harbor.—(See plan.) A permanent foundation for this light-house, enclosed by strong pier work according to the drawings herewith, is estimated to cost 4,651 45
 A permanent light-house, in all respects like the one at Buffalo, erected on this foundation, is estimated at 5,500 00

From observations made at this harbor and elsewhere along the lakes, it appears that where the water is so deep that the waves do not break upon the natural bottom, they are best resisted by a vertical structure. This remark is known to be in direct opposition to prevailing notions, and to almost all practice; still it is now advanced with confidence, and may ere long be again urged more at large; at any rate, there is some direct proof in relation to the east harbor pier. In consequence of a strong conviction of the soundness of this opinion, the agent at Oswego was requested to "observe the east pier very carefully in every blow, and let me have his (your) opinion whether, if it be made vertical with a strong wall, it will not do without a breakwater outside of it." The answer is: "I have had an opportunity of witnessing two pretty severe blows from the northeast, in which it would naturally be supposed that the east pier would be most exposed; but the flooring (top) was scarcely wet, while the west pier was continually covered by immense sheets of water; and the same happens in all blows that I have observed." "There has never been any stone thrown outside of the east pier, but a few washed out of the crib while they were sinking them, making an irregular bank a foot or two thick in some places." These circumstances induce the recommendation to make no change in the east pier, but such as is required to give durability to the work, to wit: by substituting above water strong stone walls for the work now in wood. The present broad mass of stones on the outside of the west harbor pier makes the application to it of the principle here announced impossible. The sloping profile must, in that case, be continued and perfected.

The expense, then, of placing the present work beyond accident, and of lighting the entrance, will, by these estimates, be 48,720 45
 Of which all may be expended to advantage, according to the calculations of the agent, next year, excepting the cost of the superstructure of the light-house, namely 5,500 00
 Leaving, as required for the services next year 43,220 00

All the sustaining parts of these structures are, as before mentioned, of wood; and all the wooden parts above water are, of course, rapidly decaying. The contemplated labors of the next year have reference to a future substitution, which is unavoidable, of an imperishable material for the decaying portions, and, as there is much to do in this way, the succeeding year should begin the substitution.

To give the west harbor pier a permanent character, the profile No. 2 is recommended.

The cost will be.....	\$33,842 00
To give the same character to the east harbor pier, profile No. 3 is recommended. The cost is estimated at.....	22,960 00
To build the light-house.....	5,500 00

Making the total estimated expense of finishing the works at this harbor in a substantial and durable manner.....	105,522 45
---	------------

Big Sodus bay.—The artificial works at this harbor are as follows: 1. A harbor pier, 2,138 feet long, running in a course a little north of east from the neck which connects Long Point with the main shore.— (See plan.) 2. Another harbor pier, 1,372 feet long, running a little north of west from the northwest extremity of Point Charles. 3. A channel pier running nearly north 640 feet from the outer end of the first mentioned harbor pier; and, 4. A channel pier running nearly north for 180 feet, and a little east of south about 150 feet from the outer end of the eastern harbor pier. The distance between the two channel piers giving access to the harbor, is 475 feet. The piers are in part fourteen feet, and in part eighteen feet wide; they are formed of timber sides connected by cross-ties, a floor of logs and top of planks, the interior being filled with stones. In a few places, as seen in the plan, the piers are reinforced by buttresses of timber filled with stones.

The works thus far described were commenced in 1829, and finished last year. They appear to have perfectly resisted the action of the waves, and being founded on a bottom of coarse sand and pebbles, have settled but very little in any place. The draught of water into the harbor is represented as having been increased by these constructions from less than eight feet to nine feet.

The work now in progress consists of an extension northward of the west channel pier 210 feet, and of the east channel pier 690 feet. It is supposed that these extensions will be completed this year with the present appropriation.

To complete the improvement of this harbor it is proposed:

- | | |
|--|------------|
| 1. To extend the western channel pier northward 300 feet, in order to keep the outside sand, which is said to be moved by the current towards the channel pier, from being lodged near the entrance between the channel piers. This work may be executed in 1834, and is estimated to cost..... | \$7,000 00 |
| 2. To erect a narrow pier along the back of Point Charles, and along the outside of the narrow part of the beach that connects this point with the main land, for the purpose of guarding the shore from the wash of the sea, which is now wearing it away. This pier will be about 1,800 feet long. To be erected in 1834, and estimated to cost..... | 8,000 00 |
| 3. To dredge a channel for a length of about 500 yards, 150 feet wide, and six feet deep, which will give a draught of fifteen feet of water into the bay. Including machinery and all other expenses, this operation will cost, it is supposed, \$20,000, of which \$14,000 may be refunded in 1834, and \$6,000 in 1835..... | 20,000 00 |

The substance to be dredged is represented to be a concretion of sand and iron, forming a mass of considerable, though not stony hardness. It is penetrated by the piles that have been driven on parts of the structure, and may, no doubt, be broken up and removed by ploughs and scrapers. The nature of this bottom promises permanency to any excavation that may be made in it.

Total estimated cost of completing the present project.....	35,000 00
The sum just stated, viz: \$35,000, will give to Sodus bay all that was originally looked for, namely, a good depth of water in the channel; a spacious and perfectly safe anchorage in all weathers, and, during daylight, an easy entrance. Two other indispensable qualities will still remain to be provided; these are, ready access by night, and such a strong and durable character in the works themselves that the advantages mentioned may be secured for all future times. The first of these requisites may be had by the erection of a beacon-light near the end of one of the channel piers, of which the expense will vary according to the mode of construction. If of wood, and founded on a pier of timber and stone, the expense may be about.....	2,700 00

Like all the other harbor improvements on Lakes Ontario and Erie, the operations at Sodus must, thus far, be considered as experimental; indeed, the problem as to this place is not even now fully solved, because, although a perfect shelter has been obtained for the deep water within the bay, sufficient depth of water over the bar (between the piers) does not yet exist.

There is no reason, however, to doubt the full success of the dredging process, and it is important now to look forward to the means that, in that event, will be needed to impart durability to those portions of the work which (to save cost, in the uncertainty of the issue) were erected of perishable materials.

All the wood work of the piers above the lowest water of the lake will have decayed in eight or ten years. To substitute a facing of large stones for the outer and of smaller stones for the inner side of the piers, making with these strong stone walls, laid in hydraulic mortar, filling the space between the walls with inferior stones, and paving the top with large stones, will cost, it is supposed, about.....	40,000 00
--	-----------

This latter operation need not be begun for some time, and, in fact, it may be best to wait, in order closely and fully to observe the effect of weather, of the ice, and of waves upon the structure. Careful observation during two or three years may point out important matters of detail in the conversion of this timber work into stone work.

According to these estimates, the future operations at Sodus bay will require the expenditure of.....	77,700 00
---	-----------

Mouth of Genesee river.—The object of the improvements of the mouth of this river was to remove from between certain limits a body of sand lying off the mouth, through which there was a crooked channel with but from six to seven feet draught.

To accomplish this object (beginning in 1829) two parallel piers were run into the lake from the points which form the mouth of the river.—(See the plan.) The piers are distant from each other 360 feet. At the close of 1832 the west pier was 1,720 feet long and the east pier 1,880 feet long. There have been added, and will be finished this year out of the appropriation, 585 feet to the west and 527 feet to the east pier, making the former 2,305 feet and the latter 2,407 feet long. The effect on the bottom between the piers has perhaps fully realized the most sanguine hopes; the channel is now straight, and has a depth of 11 feet in the shoalest place. Where the depth was originally but 4, 5, or 6 feet, there is now 16 and 17 feet. The force of the current which has wrought this change has also operated to cause an unequal subsidence in parts of the piers; any further action of this sort may, however, be effectually prevented, and, it is believed, has been, by a small deposit of stones at the foot of the piers. The piers are of timber sides and cross-ties, are filled with stones, and are from 18 to 20 feet wide; as yet, their stability has been in no perceptible degree impaired by the violence of storms. In order to obtain a depth of 15 or 16 feet water, it will be necessary to advance the piers further into the lake, because the shoalest part of the channel is at and near the ends of the piers. It is supposed that a further prolongation of 900 feet will give the depth required. This prolongation may be executed in 1834, and, according to the estimate of the agent, will cost \$22, 500 00
There should be a beacon-light near the end of one of the piers—estimated cost 2, 700 00

Total cost of bringing the works, in their present form, to completion 25, 200 00

The remarks made on the perishable nature of the materials employed in the construction at Oswego and Sodus, apply equally to these. Thus far this experiment has been completely successful, and there is no reason to doubt a proportional triumph over natural obstacles for the additional means which it is proposed to apply. It becomes necessary, therefore, to know what must be done to give permanency to these important improvements.

Adopting a plan similar to that recommended for Sodus—that is, converting the timber work, above water, into masonry of the best kind, the expense is estimated to be about 34, 000 00

Making the total cost of the future operations at the mouth of the Genesee river 59, 200 00

Black Rock harbor.—It is through the artificial harbor that the great western canal of the State of New York gains access to Lake Erie; and it is by means of a large lock at the foot of the harbor that vessels passing between Lakes Erie and Ontario, through the Welland canal and Niagara river, avoid the Black Rock rapids. The pier which forms the harbor, by separating it from the river and keeping the waters up to their lake level, runs south, nearly parallel with the east shore of the river, from the upper end of Squaw island to within a short distance of Bird island.—(See sketch herewith, A.) As the canal enters the Niagara river near the lower end of Squaw island and leaves it again opposite the point just indicated, this portion of the harbor is also a portion of the canal, the pier and the dike on Squaw island forming its western margin. This portion of the pier and the dike was constructed by the State of New York.

At the point A commences the work executed under appropriations from Congress. The pier diverges at this point towards the western end of Bird island, and continues 415 yards, to B; it then runs south to the island, a distance of 158 yards, to C; and, lastly, it runs easterly to the eastern end of the island, to D, a distance of 200 yards.

Bird island is a mere ledge of rocks, scarcely rising in any place above the surface of the lake. This ledge has, however, considerable breadth, though lying chiefly under water, and occasions very heavy breakers in certain frequent winds. A pier was first built upon this island (from C to D) of timber; this was thrown down by the surf, and the operations of this year have been the substitution, in part, of a mole of large stones. The funds available under the last appropriation are, however, inadequate to such a construction as will insure its stability. The exposure is such that only a work massive in itself, and made up of large stones, laid on the exterior side with great care, in the manner adopted at the Buffalo mole, can be expected to withstand the violent action to which it will be exposed. At the eastern extremity of this mole there must be erected a beacon-light. This beacon, aided by the neighboring light-house at Buffalo, will afford safe conduct into the harbor in almost any state of weather. The additional appropriation needed for completing the mole, C D, and for erecting the proposed beacon-light, is estimated to be \$3,000.

The appropriations by Congress for this harbor were founded on a project submitted by Major Maurice in the year 1828; which project, besides suggesting the works now finished or in progress, contemplated the erection of a pier or mole to commence on the east shore, within the jaws of the harbor, and extend obliquely into the lake in the manner represented at E. One object of this mole was to render the harbor more safe and tranquil by making it more close, and preventing the recoil of the surf into it from the adjoining beach; but another and principal object was to arrest the sand moving along the shore, and prevent its entrance and accumulation in the harbor. The sand thus borne along was, before the formation of the basin, carried away by the rapid current of the river. Now it is deposited just within the mouth; and although it has not as yet produced any serious inconvenience to the navigation, it threatens seriously to obstruct it, unless arrested by some suitable means. The proposed mole it is thought will be an effectual barrier.

The fact of a progressive motion of the sand along the shore is evident, in a greater or less degree, in many places on the lake. The cause is not obscure, and serves to explain the shutting up of certain rivers in the summer, the wearing away of points of land, &c. Taking the present case—suppose the wind to blow in the direction *a b*.—(See sketch.) Let *c* be the point at which a wave, rolling up along the line *a b*, first begins to disturb the bottom, and *d* the highest point on the shore to which the wave is driven; a particle of sand may, therefore, be transported by the wave from *c* to *d*. The wave was constrained to pursue the course *c d* by the direction of the wind, but in recoiling it will obey only the law of gravity, and instead of retracing its path and leaving the particle of sand where it was taken up, it must retire by the line of greatest declivity of the shore, which is *d e*, (at right angles to the shore,)

leaving the particle at *e*, advanced by the distance *c e*, on its journey towards the mouth of the harbor. The succeeding wave lifts the particle from *e* to *f*, and falls with it from *f* to *g*, and so on. All winds (as *a b*) blowing into the quadrant *e h*, tend to move the sand towards the harbor, while such as blow into the quadrant *e i*, for example, *k d*, tend to cause an opposite motion. But the former are the prevailing winds of the year, and having, moreover, an extensive range along the lake, they drive a heavy surf upon the shore in question, while the latter winds are but occasional, and, blowing off the land over only a narrow surface of water, cannot produce at this point waves of much comparative force. The balance of tendencies is, therefore, very decidedly towards the Black Rock harbor. It may here be observed that this motion of the sands must be at the expense of the shore towards the mouth of Buffalo creek, because the mole at the mouth of that creek prevents a supply of material from being furnished by the beach further south.

It is proposed to extend the new pier from the shore to about 20 feet water, which will give it an average depth under water of about 13 or 14 feet; to form it as high as the water's edge of cribs of strong timber, well framed and fastened together, and filled with stones, and to construct that part of it which will be above low watermark of massive stones, the side walls being laid in hydraulic mortar, and in such a manner as effectually to resist the operation of the surf and ice.

The expense of constructing the pier may be estimated at \$20,000.

Total estimated expense of completing Black Rock harbor, \$23,000.

Buffalo harbor.—The works at this harbor consist (see plan) of a mole, chiefly of stone, which runs from near the old light-house, northerly about 290 feet, to the south shore of Buffalo creek, and thence (making an angle of about 120° with this first part) about N. 73° W., say 1,500 feet into the lake. The top of so much of this mole as projects into the lake is 16 feet above the water and 12 feet wide; this top, near the end, gradually curves to the south and swells out into a breadth sufficient to afford room for a light-house; the part of the mole which lies upon the shore is but 12 feet higher than the surface of the water, and does not exceed 9 feet in width at the top. On the exposed side, that is to say, on the south, a varying slope, gentle everywhere, but becoming more and more gradual as the distance from the shore is increased, extends from the summit of the structure to the bottom of the lake. By a gradual change of direction this slope is made to enclose the mole-head and foundation of the light-house in such a manner as to cause a considerable enlargement at this part of the work. At the foot of this slope has been driven a row of contiguous piles, and another similar row has been driven at the intersection of this slope with the surface of the water. Between these two rows the mass is to be made up of large stones, thrown in without particular regard to the positions respectively occupied by them. Within the inner row the surface is to be formed of large flat stones, placed carefully in courses upon their ends or edges, being thus deeply embedded, giving to each other mutual support, and exposing their edges only to the action of the sea; this portion of the work is well advanced. The summit of the mole is now in part, and will be wholly, covered by a horizontal layer of large flat stones, accurately adjusted to each other and well-bedded on the smaller stones beneath. On the inner or channel side of the top there is a vertical fall of 12 feet down to the surface of what is denominated the tow-path; this fall being effected by a wall laid in mortar. Access is gained to the top from the tow-path by several sets of stone steps projecting from the wall. The channel side of the tow-path was built of "crib-work," and part of the operations of this year has been the substituting a strong stone wall for the upper parts of this crib-work.

On the north side of the channel is a timber pier, filled in with stones. It is nearly parallel with the mole, and is distant from it in the narrowest part of the channel about 200 feet. This pier is about 1,250 feet long, the outer end being about 600 feet less advanced into the lake than the end of the mole. This pier is about 15 feet broad.

It is designed to give to this pier the permanent character which already belongs, for the greater part, to the mole, and for this purpose to raise a wall on the channel side from a little below the surface of the water to 3 feet above water; to pave the summit with large stones, making it 20 feet broad, and to form a slope of two to one on so much of the north side as extends beyond the beach, at the same time driving a row of contiguous piles along the inner side.

At the end of the mole stands a lofty stone light-house of most beautiful and substantial workmanship.

The expenditure of existing appropriations, which must probably be carried somewhat into the next year, will, it is supposed, complete the north pier, the inclined surface and summit of the mole and the light-house, deposit the stones still required in the space marked *w*, excavate the spaces marked *x y z*, to a depth of 10 feet, and, in short, do all that was contemplated when the estimate of September 30, 1832, was made.

The progress of operations, and the present condition of the works have, however, suggested other matters of importance. 1st. To prevent undermining, either by the swell or by freshets in the creek, it is proposed to drive a row of contiguous piles along the side of the tow-path for the whole length of the mole, and as far as the United States ground extends; cost	\$2,400 00
2d. The last estimate contemplated for the tow-path wall, dry stone masonry. It is now proposed to build this wall with hydraulic mortar, which will cost in addition.....	2,900 00
3d. Instead of loose, small stones for pavement of tow-path, it is now recommended to use large flat stones; these, with the extra labor, will cost.....	7,140 00
4th. It was last year proposed to extend the tow-path 100 feet further up the creek; it seems necessary now to extend it to the limit of the United States land, which will cost.....	\$2,160 00
Deduct last year's estimate for the 100 feet	800 00
	1,360 00
5th. Easterly of the boundary of the United States land, there is a point projecting into the creek, (marked <i>z</i> ,) and forming an impediment to the navigation just where the creek makes a considerable bend. This should be so excavated that there may be a depth of 10 feet water in a continuous line with the same depth along the side of the mole; estimated expense	6,200 00

Supposed cost, over and above the present appropriation, of bringing the works at Buffalo to entire completion.....	20,000 00
---	-----------

Dunkirk harbor.—Dunkirk harbor is an open bay of more than a mile across from cape to cape, and offering no natural shelter from winds blowing from the northern quarter. To provide this shelter, a breakwater has been built on a shoal which lies off the middle of the bay, and a pier has been run off towards the breakwater from the western shore. The former is about 1,400 feet long, and the latter 1,564 feet long. Both these are strongly framed timber structures, filled with stones.—(See the sketch.)

About \$4,800, which was available for this year, will have been expended in the construction of the outer 320 of the pier.

The original design for this harbor, made by Major Maurice, is said to have contemplated the extension of the pier about 300 feet, the breakwater about 600 feet further eastward. The protection afforded by the present works would, it is thought, be improved by such extensions, to a degree fully proportionate to the additional cost; at the same time that the eastern channel would not be changed, and the western would be left of ample depth.

To extend the pier 300 feet is estimated to cost.....	\$6,006 80
To extend the breakwater 600 feet is estimated to cost.....	9,511 50
Add for contingencies, &c., near 10 per cent.....	1,481 70
The works thus arranged will afford a very excellent anchorage, having by daylight an easy entrance. It is, however, believed to be indispensable to light the immediate entrance by a beacon, which, of wood, will cost—say.....	2,700 00

Making the additional expenditure required to complete the works in their present form amount to.....

19,700 00

No appearances give reason to doubt the stability of the present works; but they cannot be said to be complete so long as the parts above water are of materials rapidly decaying. It will be absolutely necessary in some few years to build above water strong stone walls in lieu of the present timber facings, and to cover the tops of both pier and breakwater with pavements of large flat stones, all laid in hydraulic mortar. Data for an estimate are not at hand.

Erie harbor.—This harbor, about four miles long and nearly two miles broad, is formed by what has long been denominated “Presque Isle.” This is a low, sandy tract of ground, stretching out from the main shore, first being quite narrow, in a northeasterly direction, then gradually increasing in breadth, and turning more and more easterly, and finally, having acquired a breadth of more than a mile, terminating abruptly nearly north of the town of Erie. This tract has several deeply indented bays at its eastern end, encloses several ponds, and is in general thickly covered with woods.—(See plan.)

At the time the improvements of this harbor were first projected there existed but one inlet. This was at the east end, and through it there was one crooked and intricate channel of about 5½ feet water. After the works of improvements were well advanced, and had already been attended by the most happy results, giving a draught of 12 feet through a straight channel, a new inlet was unexpectedly made through a narrow part of the Presque Isle, near the west end of the harbor. Before advertent to the probable consequences of this breach, it is proper to describe the actual condition of the works at the eastern entrance, and such further operations as may be there called for.

From a point on the main shore, which considerably narrows the entrance, (see plan,) a line of harbor pier, six feet wide, was run north 19 west 1,700 feet towards the southeastern point of the Presque Isle; pursuing the same course, the pier, with a breadth of 10 feet, was prolonged 317 feet further. At this point began the south channel pier, which was run first, north 35 east 482 feet, being 10 feet broad, and then north 63 east 302 feet, with a breadth of 12 feet. On the prolongation of the south harbor pier the distance across the channel is 600 feet; and at the east end of the south channel pier the channel is 375 feet wide. The north channel pier projects into the lake a distance of 1,017 feet beyond the prolongation just mentioned, and into the harbor a distance of 246 feet, the course of the whole pier being north 63 east; its width is generally 13 feet.

The north harbor pier was extended, in the first instance, north 17 west, 673 feet, to a low point. This point, however, by the action of waves and current, changed its place; thus making it necessary to connect the pier with it in its new position, which was done by extending the pier north 27 west, 1,050 feet. In consequence of still further changes in the form and position of this point, it became at last necessary to diverge, and to carry the pier a further distance of 1,284 feet, to be there united with another point more inland, leaving the outer point as an exterior breakwater. This harbor pier is six feet wide.

The last-mentioned length of 1,284 feet falls within the operations of the present year, during which it will be completed. The amount now available will also fill the harbor and channel piers entirely full wherever there is a deficiency of stones; will, besides, cause a deposit of stones to be made for the security of the east end of the south channel pier, and will supply all deficient planks in the tops of the piers.

In regard to a portion of the future operations on the harbor, perhaps the most distinct idea can be formed from the instructions which, in reference thereto, were left with the agent. They are, therefore, in part, here transcribed.

“A very careful sounding should be made along both sides of the piers and breakwater, (harbor and channel piers,) and off at the several distances of, say 15, 30, and 45 feet. These soundings should be laid down upon a plan of the works drawn on a very large scale. Lines of soundings should also be run across the channel at about every 50 feet, and entered upon the same drawing.

“Wherever these soundings show that the sand has been grooved out next the works, stones should be thrown in until they rise three or four feet above the proper bottom, and have a slope of two base to one altitude.

“In certain places it may be advisable to throw in these stones upon a stratum of brush-wood. In case these stones are thrown into a place exposed to a heavy swell they should be large; if not so exposed, they may be small. The east end of the south channel pier should be reinforced with a mass of large stones without delay.

“It is considered very important that the soundings above-mentioned should be taken and protracted on the plan with great accuracy, so that, being done from time to time, (the dates always being entered,) the progress of every change in the bottom may be distinctly seen. What will it cost to place these stones? Can they be thrown in this year?”

As no estimate is made by the agent, in a letter lately received from him, for throwing stones along the sides of the piers, it is presumed the soundings above directed showed the bottom next the piers to

be undisturbed. The above-mentioned reinforcement of the east end of the south channel pier will be effected by the funds in hand.

"One of the most important future operations will be the closing the present breach at the junction of the south pier and south breakwater, (south channel pier, and south harbor pier.)

"To do this I would recommend that two rows of piles be driven as in this sketch: the piles being about 8 or 9 feet apart in each row, and the rows being from 20 to 30 feet apart, according as they can be made to embrace more or less closely the ruins of the old work; but whatever may be the separation of the rows, the several parts of the rows should be accurately straight. These rows should overlap upon the present fixed parts from 15 to 30 feet. The piles being driven and secured to each other at top by temporary ties, small stones should be thrown into the hole at and near the breach, until a level surface has been formed therewith 15 feet below the surface of the water. Curbs of strong timbers, well secured by cross-ties, should then be sunk in close contact with the piles, and so as to occupy all the space between the piles. These cribs being filled with stones, a bank of stones, about 6 feet high and 12 feet broad, should be added on each side of the crib-work. A section of this work is here given. What will it cost?"

The estimate furnished for this object amounts to \$3,045.

The breach just described was made by the very same action of the water as is relied on to maintain a straight and deep channel between the piers. The action, however, at this particular point was greater than was looked for; a portion of the pier work was undermined, upset, and ruined; and so great, at times, was the current through the breach that the sand of the bottom was scooped out to a depth of 30 feet. This breach must now be repaired with such precaution as will avert any similar accident for the future. These precautions are indicated in the instructions just quoted.

Up to this moment this project for the improvement of the harbor has never been brought to bear fully upon its object. The line across the inlet has, indeed, been complete; that is to say, it has connected the two shores once or twice; but before sufficient time had elapsed to give the maximum result as to the channel, either the waters had worked a passage round the south end of the harbor pier, or they had found an outlet through the breach, thereby materially weakening the action in the channel. Notwithstanding these divisions of the current, however, the experiment, as has been stated, is successful, a deep and direct channel into the harbor having been substituted for one that was both shallow and intricate. But it will not answer to leave the works in their present state, because the breach will be progressively enlarged by the undermining of more and more of the piers, and at last the current through the channel will be so reduced that the passage may be closed by a new deposit of sand.

The first object, then, must be to bring the piers, in their present form, to entire completion, by connecting them securely with the shores, so that no water shall pass around them; by fully loading them with stones, so as to give strength to resist the shocks of waves, ice, &c.; by protecting their bases from the undermining force of the current; and by closing the breach, so that all the passing water at the end of the harbor shall be limited to the channel.

As before stated, the estimated expense of these operations, over and above the sum now available, is \$3,045.

Before the formation of the new inlet at the west end of the harbor, especially after some progress had been made in the works, there was no visible reason to doubt the happy issue of the experiment. Is there any reason to doubt it now? This is an important question, and one which at this moment does not, probably, admit of an answer. If the new inlet is to cause a diminished depth of water through the eastern entrance, this new inlet must be closed; if, on the other hand, no sensible effect is produced on the eastern entrance, and none upon the depth in the harbor, then two things may be done: 1st, precautions may be taken to guard the Presque Isle from a further spread of the inlet; or, 2d, a western entrance may be formed with part of, if not all, the qualities of the eastern; and should the latter result be obtained, the valuable properties of this harbor would be greatly enhanced. Can this question be solved now? In other words, can the best mode of operation be hit upon now with that degree of certainty which would warrant the considerable expenditures required? It is thought not. There is good authority for stating that the depth through the new inlet is less now (by about two feet in the deepest) than it was some months ago. There is also good authority for stating that the current through the eastern channel has not greatly lessened, and it is certain that the depth through this channel is still quite sufficient; and though there is no mode of ascertaining accurately whether this channel remains unchanged, has somewhat lessened or increased its depth, there is, at least, no direct evidence that the draught has been at all reduced. If, then, no injurious consequences have resulted to the old inlet from the new, while the former has been in a state not admitting the full display of its improving tendencies, it seems advisable to wait for this display before a decision is had on the project to be applied to the western entrance. While there was but one shallow and sluggish channel into the harbor, it would have been a bold scheme that contemplated the formation of two artificial channels, wrought to considerable depths solely by the rapidity of the current. One such channel has, however, already been produced; and present appearances, and circumstances which have developed themselves during the progress of the operations, show that a second is certainly not beyond the scope of possibilities.

A short delay will not at any rate be attended with any evil; and in the meantime measures may be taken which will make the government to decide correctly either upon closing the inlet, leaving it open with some precautions against a further extension, or forming a second artificial channel. The measures adverted to besides the completion of the present works as herein advocated, and the minute soundings at the eastern entrance as directed in the instructions above quoted, include a survey of the harbor and Presque Isle, and accurate and numerous soundings over the whole harbor, in the new inlet, and in the lake opposite. The survey and soundings being made on a drawing thereof made to a large scale, new sets of soundings should be marked at least every three or four months; the places of the new soundings corresponding as near as possible with the places of the old.

Should any changes be in progress a year or eighteen months will fully show their nature and tendencies. And unless the whole truth in relation to this matter be known, that is to say, unless it be known whether the bottom be unchangeable, or, if otherwise, to what extent and in what manner changes are being wrought, it would be only by hazard that a suitable system of operations could be selected.

Finally, under these views of the whole subject, it is recommended—

1st. To cause the present works to be brought to completion, and to be secured against any further injury or accident for any cause.

2d. That directions be given to attend closely to the instructions above quoted in relation to the soundings at or near the pier and in the channel.

3d. That a survey be made of the whole harbor and Presque Isle, including very numerous soundings over the whole harbor, through the new inlet, and in the lake opposite thereto; and that a new series of soundings, always as nearly as possible in the same spots, be taken every three or four months and noted upon the map, together with any changes that may have been made in the form of the shore.

So much is yet indeterminate as to future labors in this harbor, that it would be useless now to attempt an estimate of the ultimate expense.

Mouth of Conneaut creek.—The works for the improvement of the entrance to Conneaut creek consist of two nearly parallel piers which run first north about 330 feet and then northwesterly about 800 feet into the lake; at this distance the piers diverge and continue 120 feet further, causing the channel, which is elsewhere about 100 feet broad, to be increased to 176 feet.—(See plan.)

Previous to the erection of these piers the mouth of the creek was often during a low state of the water therein entirely closed, being shut up by a dry sand bank. Now, excepting at one spot where there is a narrow gravel bank with 8 feet water over it, the channel varies from 9 to 16 feet, and remains equally deep at all seasons.

The \$3,500 (about) available for these works in the beginning of the year will suffice, it is thought, to complete them in their present form, the operations being confined to finishing some wood work, throwing stones next the bottoms of the piers in certain places, and dredging out the gravel bar.

A beacon-light which should be placed on the end of one of the piers, will cost, say \$2,700.

The conversion of the upper parts of these wooden piers into strong stone walls, which will be indispensable in a short time, will involve a considerable additional expense. There are now, however, no data whereon to found an estimate of their cost.

Mouth of Ashtabula creek.—This creek, like the Conneaut, was sometimes entirely closed by a dry sand bank, and the works of improvement designed here, as there, to keep the channel permanently open, have been attended by a like result. Here, however, a bed of rock was encountered by the current, which, of course, set limits to its effects.

The works consist of two nearly parallel piers of timber filled with stones. They are about 1,250 feet in length, running nearly north into the lake, and are 14 feet wide.

The width of the channel, owing to the piers not being perfectly straight, varies from 100 to 145 feet.

Although the piers, as delineated on the plan herewith, are complete as to the wood work, a quantity of stone in addition will be required to increase their stability; cost estimated at..... \$425 00

It is deemed expedient to prolong the west pier up the river so as to unite with the bulk-head marked *a*, and to extend both piers about 150 feet further into the lake to enable the current to remove the sand bar lying off the entrance. These operations will cost.... 7,591 40

The rock before spoken of as arresting the action of the current, allows a draught into the river of not quite 7 feet over the rock, and at the same time secures from disturbance the lighter materials of the bottom for some distance both within and without the ledge. This is evident from the plan. Fortunately this rock is of so soft a texture that it is broken up rapidly by the machinery now in operation.

The expense of taking out the rock remaining after the year's operations for a channel 60 feet wide and 10 feet deep, is estimated at..... 4,600 00

To show the way into the harbor at night a beacon-light at the end of one of the piers is indispensable; estimated cost..... 2,500 00

15,116 40

Deduct amount available after this year's operations..... 3,717 27

Add $2\frac{1}{2}$ per cent. for disbursement..... 284 98

11,399 13

284 98

Amount required for next year's operations..... 11,684 11

The succeeding year's work should consist in enlarging the rock excavation as much as can be done without endangering the piers; the cost thereof is set down at..... 3,075 00

3,075 00

Making the total expense of bringing the temporary works to completion..... 14,759 11

14,759 11

As in several other cases the cost of substituting stone for the timber work above water cannot well be ascertained. That expenditure will, however, be unavoidable at no distant day.

Mouth of Cunningham's creek.—The object of the improvements at this place was to obtain shelter for vessels independent of all access to the creek; and for this purpose Major Maurice designed two parallel piers to run into the lake at the distance of 475 feet from each other. This wide space to be nearly covered in front by an isolated pier or breakwater lying still further in the lake, and running parallel with the shore. The parallel piers were to be formed of cribs, or small piers separated from each other, for water way, about 30 feet, and connected at top by bridging. The breakwater to be solid from end to end.—(See plan No. 1.) In execution of this project the works for the western pier have been carried out the intended distance, and are represented as having already rendered very great service to the navigation of the lake, although as yet inadequate to the demands of business.

Of about \$500 available for the operations of the present year, it will be expended upon the piers marked *a* and *b*, without bringing them to completion. In the opinion of the local agent, observation and experience have shown that the plan of Major Maurice would be improved by converging the eastern pier towards the western, as shown on No. 2 of the plan, as thereby, while the harbor would be sufficiently capacious and expense less, a better shelter would be afforded either independently of the breakwater or with an equal length of breakwater.

The expense of completing the present pier, together with some repairs in the wood work, may be estimated at..... \$500 00

The expense of constructing the eastern pier according to No. 2 of the plan, is estimated at..... 6,665 20

The expense of erecting the breakwater according to No. 2 of the plan, is estimated at.... 6,388 90

A beacon-light, say..... 2,000 00

2,000 00

Making, for the purpose of completing the harbor, a further appropriation necessary, of..... 15,534 10

15,534 10

Giving a permanent character to those works will require the future application of stone work for the wood work that is out of order. The cost thereof cannot now be calculated.

Fairport, mouth of Grand river.—The works at the mouth of this river are two piers, separated about 200 feet, and running a nearly north course, about 600 feet beyond the original shore, into the lake. At this distance the eastern pier terminates; but the western turns a little westward, and proceeds 150 feet further. Within the original line of the shore the western pier continues first south about 200 feet, and then southwest 308 feet, to the left bank of the river. The eastern pier runs within the same line a nearly south course for about 400 feet, where it joins the private wharfs.—(See plan.)

During the summer the mouth of this river was often entirely closed, while now there is a straight and free channel of at least twelve feet depth.

About \$1,200, which was available for the present year, will have been expended in driving piles, in planking, and in throwing stones into the two piers.

A foundation has been laid near the end of the east pier, for a beacon-light. The light-house has yet to be erected, and will cost, say \$—.

Not having received from the agent the estimate asked of him, of the necessary future expenditures at this harbor, the amount cannot now be stated.

Cleveland harbor.—The map of the mouth of the Cuyahoga river, herewith, shows that a draught of at least eleven feet of water can now be carried between the piers into the river, although the mouth, previous to these improvements, was, at times, entirely closed.

The piers, which have wrought this important change, are, for the greater part, parallel, running about 1,200 feet into the lake, and having between them a channel of about 200 feet in width. At the outer extremity of the eastern pier is a beacon-light, which it is designed to reinforce by some additional pier work; and it is also designed to add a wing and pier head to the western pier. At the beach, or shore of the lake, the two piers diverge considerably as they extend up the river, in order to their being firmly united with the shores. The pier work is generally from ten to twelve feet broad, and rises about four feet above the surface of the lake.

The sum of about \$3,400, which was disposable at the commencement, will all be required for the operation of the year, in placing stones within and by the sides of the piers, adding some timber work, &c. Recent soundings have shown that to guard the piers from the undermining action of the current, stones must be deposited to the amount of \$4,800. In addition, stones must be thrown into the piers wherever they have settled. For these materials, for brush wood, for labor and contingencies, &c., the whole expense is estimated at.....

For an addition to the eastern pier head to protect the beacon-light	\$7,200 00
For a wing and pier head to the western pier.....	1,569 50
	4,545 70

Making a present additional appropriation necessary of.....	13,315 20
---	-----------

In the future change of the upper perishable portions of these works into stone, it should be borne in mind that the present height of these works, and all others on the lake, excepting those at Buffalo, is too little, especially for works in stone. The beacon-light pier head is here about $7\frac{1}{2}$ feet above the surface; still high seas roll over it. The rest of the work being but about four feet, is of course swept by much more moderate seas. It is now often an undertaking of no little danger and difficulty to get access to the beacon-light at times when the light is most needed.

Mouth of Black river.—The piers which form the entrance into Black river are separated about 200 feet, and extend into the lake from the original beach, one about 1,300 feet, the other about 1,000 feet. The mean course is just N. 62 W., and then N. 46 W.—(See plan.)

The mouth of this river is not known to have been entirely closed, although the depth has been sometimes not more than three feet. At present there is everywhere a sufficient depth of water; namely, from ten to fifteen feet, except on a shoal which extends from pier to pier, not far within the mouth of the harbor. On this shoal there is but $7\frac{1}{2}$ feet in the channel, and five feet near the piers.

The sum of \$4,700 (about) which was applicable to expenditures here within the year, will have all been disbursed in erecting the head of the west pier, marked *b*, and in dredging at the shoal.

In prolonging the east pier, (*b* and *c*), filling the piers with stones wherever deficient, protecting them at their bases wherever required, excavating the channel and also the shoal in advance of *c*, erecting a beacon-light, &c., &c., it is estimated that a further sum will be expended of \$17,700.

Mouth of Huron river.—The mouth of this river, like several others mentioned, was, before the construction of the harbor works, often completely shut up by a bank of sand. Now, as shown on the plan, there is a straight channel of from ten to twelve feet depth.

The piers are nearly parallel, being 140 feet apart at the outer, and 170 feet at the inner end. Their whole length is about 1,400 feet, and they project into the lake about 1,000 feet. Their breadth varies, according to circumstances, from eight to eighteen feet, and they rise five feet above the water.

The sum remaining unexpended of not far from \$500 will probably be sufficient to replace the few stones that have sunk from the piers.

It seems advisable, for the safety of vessels entering the harbor, to construct a head about 90 feet long to each of the piers. These should stand obliquely to the direction of the piers, so as to increase the width of the entrance. As the agent did not furnish an estimate thereof, the cost cannot be here stated.

A beacon-light on one of the piers will be indispensable, and may cost \$2,700.

The future cost of replacing the upper timber work with strong walls cannot now be estimated.

Before closing this report it is thought proper to recommend that instructions be given to the agent at each of these harbors to make without delay (if not already made) an accurate survey of the works now erected, drawing a plan thereof on a large scale; to make very numerous soundings within the channel, and off from the piers, noting the results upon the map; to repeat these soundings at intervals of three or four months, making them always in the same lines, and as near as possible in the same places; and, in order to secure this agreement as to the places of the soundings, to cause the piers to be permanently marked at the points whence the lines of soundings are run. To show, in part, the manner in which these surveys and soundings should be made, a sketch (on a small scale) is given herewith.

In conclusion, it is but just to mention that to all the works examined there seemed to have been applied a judicious system of operations and a watchful care of the public interests.

All which is respectfully submitted,

JOSEPH G. TOTTEN, *Lieutenant Colonel of Engineers, Brevet Colonel.*

F.

Report of work done at the Great Raft on Red river, Louisiana.

On the 1st of April last I arrived at the foot of the raft with four steamboats, namely, the snag-boat Archimedes, the Souvenir, Java, and Pearl, all belonging to the United States, and one hundred and fifty-nine men, including officers, mechanics, cooks, laborers, &c. At ten o'clock that day commenced work, and proceeded into the raft on that day about two miles, but found the current so slack that the timber, when separated, would not float off. The dead water extended at that time about forty miles below the raft. On the 12th I began to pass the timber out of the river into the low bottoms and bayous that pass off from the main bed of the river, to the lakes and swamps. Those bayous I have filled up in as effectual a manner as it was practicable at the high stage of water that prevailed during my stay at the raft, throughout the whole distance I proceeded. By that means I forced the water which was carried off by the bayous to pass again down the old channel, which has produced a current from the extreme upper end of my operations to the original foot of the raft, and forty miles below, of three miles an hour. In the distance of seventy-one miles which I proceeded into the raft, I found the mass of timber in fifty-six sections covering about one-third of the whole surface of the water. In many places the timber was quite solid to the bottom of the river, which I found to be an average of twenty-five feet deep. Many places, however, immediately above or below a section of the raft, the water did not exceed fifteen feet, until after the raft was removed, and a current produced by opening a free passage for the water, when those banks of mud all disappeared in a short time, and left a uniform depth of twenty-five feet. The islands that had been formed by the location of the raft have all been taken out, by drawing the trees that grow on them out by the roots, and the action of the water on the mud and sand of which they had been formed. All the timber that leaned over the water in such a manner as to obstruct the navigation has been taken away as effectually as it could be done in high water. The navigation is now good for steamboats as high up as the Caddo agency, seventy-one miles above where I found the foot of the raft in April last. Still, great improvement may be made on the same distance, by cutting away the growth of timber that has sprung up within the natural banks of the river, quite down to its extreme low water bed, since the formation of the raft. This, however, is absolutely necessary, and must be done to put the river in a situation to carry the entire mass of drifting timber that annually falls into it out to the Mississippi, and by that means effectually prevent a removal of the raft. It will also be necessary to extend that work to the head of the raft, or as high up as the timber may have grown up so as to form obstructions to the passage of the timber that must pass down in the spring freshets. The mouths of the bayous which have been cut out from the main bed to the swamp must also be carefully stopped up, so as to turn the water back into the original bed, which has sufficient capacity to carry off the whole column of water so soon as the raft is removed and the channel brought back to its original course, which must be the consequence of filling up the bayous, and taking the timber out of the bed through the main river. This work can be most effectually done during low water. It will be advisable to do it in the months of October, November, and December. The same men may be continued through the high water season. By this means the whole work can probably be done by one expedition, from, say, 1st of October to 1st of June.

From the best information I have been able to obtain there yet remains about seventy miles in length of the great raft. I have passed through thirty miles of the remaining raft, which I found to differ but little from that already removed either in character or quantity. But near the head of the raft the labor will be much increased, owing to the strength, size, and quantity of timber. Having more recently fallen into the river, many of the trees still retain their branches and roots, which will make them much more difficult to remove than timber that has been lying in the water so long as to lose the tops and roots by decay. Under these circumstances, I am induced to believe that an appropriation of \$10,000 will be as little as the whole work can be effectually completed for, if done in a proper manner, and so finished as to be permanent and free from all risk of a re-formation, which must undoubtedly take place if the timber is not cleared out of the bed of the river in such manner as to prevent the drift logs from lodging on the banks. To accomplish the work will probably require about the amount of labor and expenditure shown by the accompanying estimate.

That the removal of the raft can be accomplished there is no doubt. Nothing is required but the necessary funds in the hands of an individual who possesses the requisite skill with sufficient energy to put that skill in operation.

As relates to the expense of removing the raft, it will be repaid at least threefold by the lands that must evidently be redeemed on the immediate line of the raft. All that land is of a first rate quality for the growth of cotton, and there is now growing the best tobacco made in the United States on several improvements now in cultivation on the river about midway of the raft.

I am, sir, respectfully, your obedient servant,

HENRY M. SHREVE, *Superintendent, &c.*

G.

Annual report of work done for improving the navigation of the Ohio, Mississippi, Red, and Arkansas rivers, ending the 30th September, 1833.

In the months of October, November, and December, 1832, January, February, and March, of this year, the steam snag-boats Helepolis and Archimedes removed from the bed of the Mississippi river 1,293 snags. The same boats in August and September, 1833, removed from the bed of that river 667 snags, in

all 1,960 snags during the year. The crews of the same boats have, within the year, felled from the falling-banks of the Mississippi (at times when the water was too high to remove snags, and when the engines of the boats were out of repair) about 10,000 trees. During the month of November last those boats were engaged in removing the Choctaw Indians from Memphis, Tennessee, and Vicksburg, Mississippi, to the mouth of the Arkansas river.

One hundred men were employed in August, September, October, November, and December, 1832, felling timber on the banks of the Mississippi river, and cutting snags from the dry bars and island chutes. They proceeded from St. Louis to the mouth of the St. Francis river, distant five hundred miles, where they cleared the timber from all the falling banks and dry sand bars. The last-named work (felling timber from the banks of the river) is thought by many persons to be an injury and not an improvement to the river. I am, however, of a very different opinion. I believe it to be the only effectual mode of removing obstructions from the shores, and of great importance to the improvement of the channel. This opinion has been formed from actual observation. For some five or six years the trees have been cut from the falling banks of the river nearly all the distance for the first three hundred miles below the mouth of the Ohio, where the shores of the river are comparatively clear of snags, logs, and roots, safe to land at with a flat boat, and in the stream the accumulation of snags is not more than half so great as in those parts of the river where the timber has not been felled from the banks; nor are the banks safe to land at with any description of boat, in consequence of the bends where the banks fall in being very much obstructed along the shores with the trees, roots, and logs that are falling in with the banks. Many persons object to felling the timber above alluded to, alleging that the stumps roll in as the bank caves in, and lie on the bottom, forming a dangerous obstruction to the navigation. This I view as an erroneous opinion. Every man well acquainted with the character of the Mississippi river must recollect that the banks that fall in are washed by the deepest and most rapid portion of the stream; consequently, when a stump slides from its foundation it sinks below the draught of any craft that can navigate the river, as the bends where the banks fall in are universally from ten to fifteen feet deeper than the best channels over the bars that stretch across the river from the foot of one bend to the head of the next at almost every point in the river. Where the timber falls in the root sinks, and the top either floats and forms a snag or the top of the tree lies on the bank and keeps the shores perpetually obstructed to such an extent that a flat boat attempting to land at them (and if caught in a gale of wind they are obliged to pull for the first bend they can make) are frequently stove and lost; and if they make the land they are liable to be sunk by the trees falling on them. That work has, however, been abandoned for the present year, very much against my judgment.

During the last year several steamboats have been lost by striking logs or snags; but none of them were good and substantially built boats. I would here beg leave to observe that a great many of the boats now navigating the Mississippi river are very light timbered, just sufficient to hold the plank together to bear caulking; consequently, if one of those boats strikes a snag, drift log, or anything of sufficient weight to fracture the plank, the boat is stove and sunk. The inquiry is then made, what did she strike? The universal reply is one of Schriver's stumps; but if it was a stump, and a first rate substantial boat were to strike it, she would evidently be stove, for a stump is one of the most dangerous description of obstructions that could be in the river. But I have not known a good substantial steamboat to be stove, excepting one, for the last four years. The heavy boats of three hundred tons and upwards are nearly all stout well built boats, and from their greater draught of water are more liable to strike than those of a smaller class, and if they do strike, must receive a much heavier shock from their greater weight and greater speed with which they run, for the largest boats are universally the swiftest. Yet but one of that class of boats has been stove in the Mississippi river in the last four years; consequently, I am of the opinion that almost all the losses of steamboats for the last four years, from being stove, have occurred from the insufficiency of the boats, and not from the stumps, to which nearly all the losses are charged. I am of the opinion that the Mississippi river is at this time as safe to navigate, except in extreme low water, as it will ever be. For the improvement of the extreme low water navigation of that river much is yet to be done. To execute that part of the work it requires extreme low water, which continues but a short time each year, consequently requires a longer time to complete.

In the Ohio river there was a dam built last fall at French island, one at Three Mile island, nearly completed; the dams commenced at the Scuffletown bar and the Three Sister islands were finished. At all those places the improvement effected has been quite equal to my most sanguine expectations. They were formerly the most difficult and shoalest bars on the Ohio river, at which no difficulty is now experienced by any boat that passes. At the head of Cumberland island a dam was commenced in September, 1832, which was so far completed as to produce a material change in the channel to the left side of the island, and probably would have been completed last year had not the cholera made its appearance among the laborers engaged in the work, about the 25th of October, which suspended the work for six weeks. A rise of water on the 15th of December made it necessary to close the whole operation for the year. In August last the work was again commenced at that dam, and has since been progressing as fast as circumstances will permit. In consequence of the prevalence of the cholera last fall, and again in the summer of this year, laborers have been difficult to obtain. There are now about 200 men employed on the work. The dam is finished, except closing the pass through it, which was necessarily left for the passage of boats, until the chute to the left of the island had sufficiently washed out and deepened to admit boats navigating the river to pass through it. There is now, within a few inches, as much water through the chute as there is on many of the bars between it and Louisville; and doubtless before the dam is so far completed as to prevent the passage of boats through it, there will be much more water through the chute than can be found in many other parts of the river above. My present calculation is to finish the dam before the rise of water in the winter stops the work, which, when done, will be a lasting and valuable improvement. The advantage gained by its construction is to make the Ohio river navigable on that side of the island in which the Cumberland river enters, which has heretofore been obstructed by a sand bar several feet above the level of low water. At the extreme low water this year there has not been less than eighteen inches over that bar. At this time there is three feet, and a large portion of the boats pass that channel; and, when the dam is completed, the bar will evidently entirely disappear. One of the shoalest bars in the river, situated at the foot of the same island, will be effectually improved by the same dam. Those immediately interested in the navigation of the Cumberland river, and the citizens of Smithland, a flourishing town at the mouth of that river, were apprehensive that if a dam was built at the foot of the island, and below the mouth of the Cumberland river, the passage up the Ohio to the mouth of the Cumberland river would be materially injured at low water. They therefore

petitioned the Secretary of War to instruct me to commence and build the dam required at the head of the island where it is now building. To those petitions I respectfully beg leave to refer, as also to my instructions on the subject. I commenced the dam, believing it to be a practicable undertaking, and of great importance to the navigation of both the Ohio and the Cumberland rivers. My opinion has been strengthened by the construction of the dam as far as it had been done. It has, however, required much more labor and time than I anticipated, and will yet require much to finish it. The rock of which it is constructed has been quarried out of a solid limestone rock. The length of the dam is about a half a mile, the average depth of water at its lowest stage about twelve feet; the top of the dam is raised four feet above the surface of low water; its base will average thirty feet. Of the complete success of the improvement I have now no doubt. It is now absolutely necessary to finish it at as early a day as possible. To accomplish that object every exertion in my power is now making.

For a statement of the operations at the great raft in Red river I beg leave to refer to my report on that subject, under date of the 30th of July last. A rough sketch of the Red river, the bayous, lakes, and swamps where the raft is situated, is herewith forwarded. It was taken from the foot of the raft to Coate's bluff as I passed up; from thence to the head—from the best information I could obtain. It is by no means strictly correct, but will convey a more correct idea of the country than can be otherwise given.

Preparations were made for removing the snags in the Arkansas river in August last. But when the steam snag-boats entered that river it was found too low to operate with those boats, and but twenty snags were removed. So soon as the water rises in the approaching winter that work will be begun and executed to as great an extent as the appropriation for that purpose will admit.

I am, sir, very respectfully, your obedient servant,

HENRY M. SCHREVE, *Superintendent, &c.*

Brigadier General C. GRATIOT, *Chief Engineer, Washington.*

H.

The board of visitors who have been invited to be present at the general examination of the cadets of the United States Military Academy, in order that the War Department may be correctly informed of the condition and management of the academy, have attended the examination of all the classes, and are perfectly satisfied with the progress made by the cadets in the several departments of their studies in which they were examined.

At the request of the superintendent, a committee, appointed by order of the board, assigned the subjects to each individual of the class, in order to avoid all suspicion of the examining professor having adapted the subject to the capacity and attainments of the cadets, so as to exhibit an appearance of greater proficiency than the class really possesses.

The first class was examined in military and civil engineering, in mineralogy, rhetoric, ethics, and constitutional and national law, and in infantry and artillery tactics, and in each of these departments exhibited proofs of their application and attainments, and of the zeal, capacity, and industry of the professor and assistants. The cadets of this class will leave the academy well fitted to fulfil the great objects of the institution, viz: to introduce into the armies of the United States all the modern improvements in the art of war, and the high state of discipline which distinguishes the best armies of Europe; to disseminate throughout our country a knowledge of military tactics and engineering, so as to furnish the means of rendering our militia, as well as our regular army, an efficient arm of defence in time of war; and to provide officers properly instructed and fully capable of superintending the construction of fortifications for the permanent defence of our maritime frontier, and of works connected with the internal improvement of the country.

The cadets of the second class were examined in chemistry and natural philosophy, and showed a degree of proficiency very creditable to the professors and assistants who have been charged with their instruction in these departments. The board would here remark that, in their opinion, it would be expedient to establish a permanent professor of chemistry. The important discoveries made and still making in this department of science, and its application to the useful arts, as well as its connexion with the means of preserving the health of the soldier in camps and barracks, render it important that it should be taught in this academy; and it is obvious that it requires great application, experience, and long practice to teach a science which must be illustrated by experiments made before the pupil. It is believed to be difficult to acquire the art of instructing youth in any department of literature or science, but it is especially so in those which require skill in demonstrating theories and principles by experiments. Instruction in such branches ought not to be entrusted to officers liable to be frequently removed.

The third class were examined in mathematics and French. There is no institution that we are acquainted with where this department of science in its higher branches is more thoroughly taught than in this academy. The high attainments and unwearied industry of the professors and assistants, together with the great application and capacity of the cadets of the third class, were exhibited throughout the course of this examination in a manner highly satisfactory to the board.

The examination in French was very creditable to the teachers and cadets of this class. They appeared to be well instructed in the grammar of this difficult language, conjugating the regular and irregular verbs very correctly, and they translated it into English with great facility, which is all that is deemed requisite; the principal object of this course being to enable the cadet to consult the best French authors on military science.

As there are at least one hundred and sixty students to be taught in this language, it is believed by those best acquainted with the subject that another teacher in this branch ought to be added to those already employed.

The fourth class were examined in mathematics and French. The cadets of this class evinced a degree of proficiency in the elementary branches of mathematics highly creditable to the gentleman who is charged with this department of their studies. Whatever may be the talents and application of the student, he cannot make any proficiency in this essential department of study, which may be considered as the foundation of all military education, unless his studies are directed by a person not only profoundly versed in the science, but possessed of great experience in the art of instructing youth; and

the board would take this opportunity of remarking, that to remove such an instructor from the academy for the purpose of substituting another, who, whatever his talents and acquirements may be, does not possess the same experience and practice in teaching, cannot but be prejudicial to the interests of the academy, and would be unjust to the cadets.

The government exacts from them, especially in the department of mathematics, a degree of proficiency which they cannot obtain without the assistance of competent instructors; and they may be exposed to be turned back as deficient, or to be dismissed as incapable of going through the course of studies in the academy, because the instructor provided for them is incompetent or inexperienced.

The board is induced to make these remarks from having had before them a late order of the commander-in-chief containing regulations sanctioned by you, which, if applied to this academy, would seem calculated to affect very materially the instruction of the cadets. It appears to them that the regulation requiring all officers who have not served with their regiments for three years to join their respective corps, as it will remove nearly all the assistant professors from the academy, would be attended with very great inconvenience at any time; and, at this period, when the superintendent, who has so long presided over this institution with such signal ability and success, is about to retire, such a change would seriously embarrass his successor. This embarrassment will be increased by the effect of the regulation, which takes from the superintendent the power of nominating the officers to be detached for that service. He is supposed, from his situation, to be better acquainted than any one else with the acquirements and moral character of the graduates; and as the responsibility rests with him, it appears but just that he should have the power of selecting his assistants. It is deemed important that the course of studies should be steady, and keep pace with the improvements which daily take place in the progress of science. This would be impracticable if the assistant professors were frequently changed and selected from officers who had graduated prior to the introduction of the improvements now taught in this institution throughout every department of science. Indeed, it would appear advisable that the professors, who have evinced so much capacity in imparting instruction to youth, should be offered every inducement to remain by being permanently attached to the institution, and receiving some additional allowance for services materially affecting the future character and efficiency of the army, and which, if they were rendered in any literary institution in the country, would command much higher pecuniary rewards.

The board attended the battalion, light infantry, and artillery drills, and had every reason to be satisfied with the instruction of the cadets in their field exercises. They were present likewise in the laboratory when the cadets exhibited their proficiency in pyrotechny, and they subsequently saw them throw shells, and fire at the target with light and heavy pieces of artillery, all which they executed with a precision rarely equalled, and not surpassed in any school of practice in Europe.

This is the more remarkable from the state of the pieces used for practice. They are very defective, and the board recommend that the several pieces of ordnance which are required for the instruction of the cadets by their able and scientific instructor should be furnished of the best quality and most approved construction.

Much credit is due to the officer charged with the instruction of the cadets in this department. He has compiled a practical treatise on military pyrotechny, and translated an excellent elementary treatise on the forms of cannon, and various systems of artillery, and another on the theory and practice of gunnery, from the French of Professor Persy, of Metz, all of which, with numerous plates illustrating the subjects, have been published in the lithographic press in the academy.

The cadets are encamped two months in every year, and during that period are instructed in all the duties of the soldier in active service, in the use of instruments, and in the application of the different branches of science necessary to a knowledge of their profession. Whether this practical course of the application of science to the purposes of military and civil engineering may not be usefully extended is worthy of consideration.

The library of the academy contains a very valuable collection of works adapted to the peculiar objects of this institution. It is rich in works on military science and on civil engineering, and contains a valuable series of military history, and the best geographical and topographical maps of the states of Europe to illustrate this important study. It is true that in works on polite literature it is as yet rather deficient, although the selection has been very judicious; but, however desirable it may be to augment the number of volumes on miscellaneous subjects, the real object of the institution must be kept steadily in view; and it will continue to be the duty of the superintendent to purchase, in preference to all others, books relating to the sciences taught in this academy, and to supply the necessary works on architecture, chemistry, geology, mineralogy, and moral science, in which the library is still very deficient.

The philosophical apparatus and astronomical instruments are of the best kind and of the latest invention, but many more are required fully to illustrate the course of natural philosophy.

The building which contains the library and philosophical apparatus is both unsafe and unstable, and the rooms are so small and inconvenient as not to admit of the necessary arrangement and display of them for useful purposes. Many instruments of the philosophical apparatus, which are delicate in their structure and uses, and require to be very nicely and accurately adjusted, are exposed to be injured by the constant and violent shaking of the edifice; and the finer astronomical instruments cannot be used from the same reason, and from want of space. A large telescope is placed in a detached building entirely unsuited to its uses.

For these reasons, and from the intrinsic value of the books and instruments, the board recommend the erection of a fire-proof building, with an observatory annexed to it.

Upon a careful and minute examination of the public buildings of the academy, it has been found that they are inadequate to the purposes of the institution, and are not only badly constructed, but entirely too limited to afford comfortable or proper accommodations for the cadets who are lodged in them.

A number of cadets are from necessity crowded into a small room, which must produce a prejudicial effect upon their studies, their morals, and their health. That they have been exempt hitherto from the diseases which are engendered in confined and crowded apartments is due altogether to the admirable system of internal police and strict attention to cleanliness which distinguish every department of this institution.

There is, besides, a want of accommodations for the assistant professors, and the quartermaster, paymaster, and adjutant are without offices. For all these purposes nearly fifty new rooms are required. The board would recommend that the superintendent be instructed to furnish a plan of a building,

capable of uniting all the accommodations required by the officers and cadets now at the academy, and of being extended whenever the government may think it expedient to enlarge this institution, and render it proportionate to our vast territories and rapidly increasing population; and that whenever it may be thought proper to erect the building now called for, it may be so constructed as to form part of an edifice hereafter to be completed with more extensive accommodations.

On examining into the fiscal concerns of the academy, the board have every reason to be satisfied that great economy has been exercised in the administration of this department of the institution, and cheerfully bear testimony to the order and regularity with which the books are kept, and the receipts and disbursements accounted for, as well as to the integrity and judicious economy with which the finances of the academy are administered.

There are several subjects the importance of which is fully understood and acknowledged by the superintendent and academic staff, but which are not taught in this institution for want of time. In military and civil engineering it is thought that the following might be introduced with great advantage to the cadets: A course of applied mechanics on the investigation and description of some of the most useful machines employed in the construction of public works. Some practical exercises in the field, such as laying out and throwing up some of the works of a campaign, which are most ordinarily used; batteries, trenches, cavaliers, the manner of conducting saps, the construction of gabions, and fascines, &c., &c., and a course of topography as applied to military reconnaissances; indeed, such is the vast importance of this branch, that a new department, embracing the whole subject, could not fail to be very advantageous to the military student.

In the department of natural philosophy many important practical illustrations might be advantageously introduced. At present the experimental part of the course is principally confined to the illustration of such facts and general principles as may be established by experiments exhibited in the presence of the entire class. These illustrations are attended with the most beneficial effects, as they serve to make a very forcible impression on the mind of the student; but they are alone insufficient. It is frequently important that the student should not only be acquainted with the name and use of an instrument, but that he should be able to employ it himself. This can only be done when sufficient time is allowed for each student to make frequent use of such instruments under the immediate direction of the professor.

This deficiency is particularly felt in the course of astronomy, where an intimate acquaintance with the use of instruments and the habit of submitting the data furnished by observation to the process of calculation are essentially necessary to enable the student to apply his theoretical knowledge to useful purposes. The instruction in practical astronomy is altogether too limited, the time which can be devoted to this object being scarcely more than sufficient to permit the professor to make the students acquainted with the objects of the few instruments in the possession of this department. This is certainly a great defect. Important lines are frequently required to be established as boundaries between States and Territories of neighboring nations, where the accurate use of instruments is of the last importance, and the cadets of this academy ought to be practically taught to use them with perfect correctness.

The principles of strategy or grand tactics might be taught with advantage.

It is true that there is no work treating of those subjects which is sufficiently condensed, and, at the same time, perfectly unexceptionable in its principles and illustrations; but the same industry and talent which has furnished text-books in other departments of military science might be employed for this purpose with great success, and furnish a series of lectures embracing a definition of the technical terms employed and such general principles as admit of the clearest and most exact illustration.

It appears always to have been desirable that cavalry tactics should be taught at a great national military academy. This branch has hitherto been totally neglected; but it has become more essentially necessary since this arm has been added to the regular army of the country. The service of cavalry and horse artillery ought to form a part of the practical instruction of this academy, and the board respectfully recommend this subject to your consideration. As the cadets are now occupied sedulously every hour of the day in the prosecution of the studies now taught in this institution, it will be necessary, if these subjects are deemed of sufficient importance to be added to the present course, that the term of the academic study should be extended, or the qualifications required on entering the academy should be made much greater than they now are. They are lower than is required by any literary institution in this country; and no doubt the frequent dismissal of those young men who cannot keep up with their class arises principally from this cause. Parents ought to be informed of the great advantage their sons would derive the first year of their course at this academy by being well grounded in the classes in arithmetic and algebra, and in the rudiments of the French language.

The manner in which the cadets are furnished with clothing was a subject of inquiry by the board, who were satisfied that this was done in the most economical manner. Their mess-room was inspected while the cadets were at their meals, and the board were satisfied that the steward fulfilled his contract faithfully, and supplied the tables with abundance.

An inquiry having been made into the manner in which the cadets are supplied with the class-books and stationery, the board are satisfied, after a complete investigation, that the cadets are supplied with all such articles at a lower price than they can be purchased for in New York, and on the most convenient, just, and economical manner, and that the arrangement made by the superintendent in this particular is marked by the same prudent economy, order, and intelligence which characterized the management of the institution.

The board, having learned that the present superintendent of the Military Academy, whose health has suffered from his close attention to the affairs of the institution, has been called to the performance of other duties, cannot forbear to express the very high sense they entertain of his merit and services during the long period of his command at this station.

To the knowledge acquired with this view by Colonel Thayer, the Military Academy of the United States owes its present admirable organization; and to his zeal, capacity, and unwearied attention to his duties is to be attributed the high state of discipline and improvement of the institution. To his exertions we owe, in a great measure, the success of this establishment, the extensive usefulness of which needs only to be understood by the nation to be fully appreciated.

Independently of serving to disseminate over the vast territories of the United States knowledge of a description which cannot enter into the usual course of studies in other academies, and furnishing the means of rendering most effective our army and militia, of securing our frontier, and improving the communication throughout the States, it is calculated to elevate the moral state of the military profession in

our country, the importance of which to the general interests of the nation cannot be too much insisted upon.

The annals of history prove that success in arms is one of the most fruitful sources of personal popularity; and, in a country where the soldier is still a citizen and may be called upon to share in the civil government or rise to the highest honors of the state, the standard of study and discipline cannot be too high which develops his talents and forms his character. The same annals show that, at the close of successful wars, the liberties of a country depend, in a great measure, upon the character of its armies. At such a period the fortunate soldier possesses power and great and probably well-earned popularity; and, if his character is not as elevated by nature or education as to lead him to prefer the solid fame of having preserved the liberties of his fellow-citizens to the glitter of false ambition, and to sacrifice all personal views of aggrandizement to the good of his country, he may plunge the state into anarchy or rivet upon his fellow-citizens the chains of despotism. If ever the liberties of the States of Europe shall be recovered, it will be effected through the improved condition, character, and education of their officers and soldiers; and, while we indulge the hope that the liberty of these States rests upon too firm a basis to be overthrown by the ambition of those who compose our armies, it cannot be concealed that, if they were not instructed, their ignorance and depravity might seriously endanger the peace of the country.

The board have observed with some regret that the old works in the neighborhood of the academy have been, in some instances, disturbed. They ought, in their opinion, to be preserved as monuments of the glorious struggle which secured our independence. The contemplation of such memorials cannot fail to have a beneficial effect. They are calculated to inspire all Americans with sentiments of exalted patriotism, and to remind them of the extraordinary efforts and great sacrifices made by our forefathers to achieve the liberty and independence of the country, and cannot fail to lead them to form virtuous resolutions, and to reflect that, as heirs of the immortal fame of their ancestors, they are bound to emulate their glorious career, and preserve their bright inheritance with the same inflexible courage and undeviating purpose.

THE SECRETARY OF WAR.

I.

St. Louis, Mo., *May 8, 1833.*

Sir: In obedience to your instructions of the 6th of February, directing me to proceed to Arkansas Territory and make an examination of the Arkansas river, from Cantonment Gibson to its mouth, with a view "to the removal of such snags, sawyers, sunken timber, rafts, and detached masses of stone, or boulders, as may offer obstructions to its safe navigation," I proceeded forthwith to discharge the duty, and have the honor to make the following report:

The Arkansas ranks next to the Missouri in size and importance, among the western tributaries of the Mississippi. Rising in the Rocky mountains, it pursues a course variously estimated, by its windings, to be from 2,000 to 2,500 miles in extent, and enters the Mississippi at latitude 33° 56' north and longitude 14° 10' west. In its general character and the color of its waters it bears a strong resemblance to Red river. The quantity of water it discharges is great, but less than is due to its immense extent, which circumstance is explained by supposing that a large proportion of that which it receives near its source is absorbed in its passage through the sandy and arid soil of the upper part of its course. In its floods it is extremely irregular, both as to season and quantity. The flood from the Rocky mountains, which is the principal one, takes place usually in June, bearing, in this particular, a resemblance to that of the Missouri; but from a late period in the fall through the winter and spring the river is subject to various partial rises, proceeding from its more important lower tributaries, which vary very much in the time of their occurrences, in their extent, and in their duration. During the present season there was a flood in January, reaching to within two or three feet of ordinary high water, and since that time, by a succession of partial rises, the river has been generally kept in good boating order for the lower six hundred miles of its course, and this occurrence is not unfrequent. At other times the river, in January, February, and the early part of March, is at its extreme low stage. A gentleman well acquainted with the navigation of the Arkansas informed me that on one occasion, in endeavoring to reach Fort Gibson in a steambot from the mouth, he was five times obliged to lay by for want of water, and five times was helped onwards by sudden rises, before he succeeded in reaching his destination. When the river is rising very fast the boats are sometimes obliged to lay by for a short time, in consequence of the strength of the current.

From the best information I could obtain, there appears, on an average, to be a difference of 25 or 30 feet between the levels of high and low water—in some places more and in some less. In general, the lowest water is expected in the four months from the middle of July to the middle of November, and at this season the steamboats are usually entirely withdrawn from the river.

Cantonment Gibson is situated on the left bank of the Grand river, two miles from its entrance into the Arkansas, and by the course of the current, according to popular estimate, about 640 miles from the mouth of the latter. Grand river is a considerable stream, flowing from the north, and though it cannot be said to be navigable for steamboats, yet its floods, when they occur, insure for the time the navigation of the Arkansas as high as the garrison. The Verdigris, another considerable stream, enters the Arkansas half a mile above the Grand river, on the same side with it, and from one point the Grand river, the Verdigris, and the Pawnee or Arkansas proper, appear to diverge as from a common centre. The waters of the Verdigris and Grand rivers are clear. Forty miles from the mouth of the Grand river, descending, the Arkansas receives from the left the Illinois, a considerable stream, whose waters are also clear, and whose influence on the navigation of the main channel is sensibly felt. Four miles lower the Arkansas receives from the right the Canadian, by far its most important tributary. This stream is said to be navigable for a considerable distance; its waters have the red color of those of the Red river, and its confluence produces a visible effect on the navigation of the Arkansas. At Fort Smith, about 120 miles from Cantonment Gibson, the Arkansas receives from the right the Poteau, a fine stream, which pours a considerable accession of water into the principal river.

The point of junction of the Canadian and Arkansas may, I think, with propriety, be called the head of steamboat navigation on the Arkansas. Between that point and Fort Gibson the chances of getting up and down with safety, and without detention, in a boat of any considerable draught of water, are too precarious to be at all relied upon. No steamboat captain, in entering the Arkansas from the Mississippi, can feel any certainty of reaching the garrison though the water be ever so high below. The flood may be out of the Illinois, the Canadian, or the Poteau, in which case he can of course get no higher than the confluence of those streams with the main current, or, if the rise proceeds from the Grand river, the Verdigris, or the Arkansas, it will, in the greater number of cases, have run off before a boat can traverse the space below. A very small steamboat, by remaining at Fort Smith, or the garrison, and watching the floods, may be very useful, and I understand it is contemplated by the Quartermaster General's department to adopt this course for the transportation of the large amount of stores required at Fort Gibson, which is now the focus of our relations with numerous powerful tribes of Indians.

Between Fort Smith and Little Rock, the Arkansas receives from the north the Mulberry, and from the south the Petit Jean and the Fouché La Féve, all small streams, but said to be navigable by keel-boats. Besides these, which are the most important, the Arkansas receives many other tributaries above Little Rock; below that point, from the peculiar formation of the country, and the proximity of White river on the north, and the Onachita, &c, on the south, its secondary streams are very few and generally very small.

For purposes of description, the Arkansas from Cantonment Gibson to the mouth may be considered as divided at Little Rock into two parts, which differ from each other essentially in general features and character. From Fort Gibson to Little Rock it is commonly called three hundred and seventy miles, or from Fort Smith two hundred and fifty, and from Little Rock to the mouth about two hundred and seventy. These numbers are those on which the pilots nearest agree, but the distances are not accurately known, and are probably overrated. Above Little Rock the banks of the river are occasionally rocky; sometimes for considerable distances rocky bluffs one hundred and fifty or two hundred feet high rise directly from the water; at other places, particularly high up, flat ledges of rock run nearly, or quite across the bed of the stream. Where the hills recede from the banks, the intervening space is filled up by fertile bottoms of various widths, as on the Ohio, and these bottoms are usually higher and more out of the reach of inundations than in the lower division of the stream. The scenery bears, in places, a great resemblance to that of the Upper Mississippi. Coal of excellent quality, and in vast quantities, is said to be found in the sandstone formation high up this part of the river. The reaches are generally longer; the stream pursues a more direct course and is much wider and shallower than below, and has numerous middle bars and quicksand shoals, rendering the navigation intricate, except at the highest stages of water, from the circumstance that the channel at such places is liable to shift at every flood. There are also in this part of the river many gravel bars, having on them those irregular roundish elevations called "potato hills" by the pilots, and which, I am informed, are occasionally liable to shift their places during freshets. Of the part from Cantonment Gibson to the mouth of the Canadian I have already spoken. The two principal obstructions there are shallow rapids, from seventeen to twenty miles below the cantonment called the "Devil's race ground," and a cascade called Webber's falls, about forty miles below the garrison. At this place there are flat, rocky ledges, extending almost entirely across the stream, with rapids for two or three miles, and a depth of channel, as I learn, not exceeding at low water from eight to twelve inches. Neither of these places, in the opinion of those who best understand them and who are most interested in their improvement, will admit of any amelioration. From Fort Smith to Little Rock the navigation is better, though the shallow bars obstruct it very much, and in two or three places the channel, when the waters are low, is very crooked and narrow, being confined by gravel bars on one side and ledges of rock on the other. It is unnecessary to enumerate these difficulties here, as they will sufficiently appear on the map and sketches with which I shall accompany this report, and are, besides, not the kind of obstructions to which my attention was particularly directed in your instructions. Improvements were, however, suggested to me at one or two points by intelligent individuals, which I have noted on the sketches for the information of the department.

At Little Rock is seen the last rock which is visible upon the river. From that point to its mouth the Arkansas runs entirely through an alluvial country. From sixty to ninety miles below Little Rock the river is touched on the right by four red clay bluffs, from thirty to sixty feet in height, covered in part with pines, and which bear a striking resemblance to the "Clicksaw bluffs" of the Mississippi. This part of the river has not in general more than one-third the breadth which exists in places above, and the channel is proportionately deeper. The Arkansas in this feature resembles the Red river, the Mississippi, and other similar streams. Below Little Rock the course of the river is remarkably devious, even among the crooked streams of the west; numerous places appear where "cut-offs" have been formed, and a few years must produce many others. The river does not, I should imagine, exceed, in its average breadth, two hundred and fifty or three hundred yards; the curvature of the bends is very great and the points frequent. There are, towards the upper part of this section, several shoal bars which obstruct the navi-

gation, particularly a bar called "Dog Tooth bar," about four miles below Little Rock, which may possibly admit, at a future day, of some improvement, as is indicated on sketch No. —. About twenty-five miles, by the course of the stream, above the proper mouth of the Arkansas, there is a channel leading from it to White river, of six or eight miles in length, which enters the White river about eight miles above its mouth, and which is usually designated by the local name of "the Cut-Off." In this cut-off the water flows indifferently from the Arkansas to the White river, or from the White river to the Arkansas, as either happens to be the highest. When steamboats can navigate the Arkansas to Little Rock they can always pass through this opening, though at the very lowest stages there is occasionally not water enough for keel-boats, and in some instances, though very rarely, the channel has been dry. At present the steamboats which navigate the Arkansas enter it from the Mississippi, exclusively by the mouth of White river and this cut-off; and though, as I am informed, four or five steamboats have, at various times, entered the Arkansas by its main channel, some of the best pilots on the river have never seen the last twenty-five miles of its course. This has arisen from the fact that the principal, and, indeed, for many years, the only landing for the Arkansas has been on the Mississippi, at the mouth of White river. But the Arkansas proper, below the cut-off, is a fine, deep, navigable stream, with no obstruction which does not equally encumber the latter; and as an establishment is now forming at its junction with the Mississippi, it cannot be doubted that in future years it will be, at least, as much frequented as the channel which is now exclusively used. It appears to me that the two entrances are equally entitled to the attention of the government.

Of the impediments to navigation, to which my attention was particularly called by the department, there do not exist, in the part of the river which I saw, any "rafts" which require removal, nor, as far as I could learn, after diligent inquiries, are there any "detached masses of stone or boulders," which in any way impede the passage of boats; but of "snags, sawyers, cypress stumps, and sunken logs," there are such numbers as to render it a matter of surprise that more accidents have not occurred from them. Nothing but extreme care, great skill, the most anxious attention in running at night, and laying by altogether when it was too dark to distinguish objects with tolerable clearness, could have prevented the most serious results. Between Little Rock and the mouth of the river, in particular, the snags are remarkably numerous, and in some places, at low water, there is barely room for a boat to pass between them, as many as forty or fifty having to be removed from single bends. To designate particularly where these obstructions occur, would be to identify individually nearly every mile of the river. Where the stream flows through alluvial flats, it may safely be asserted that wherever there is a bend, there are falling banks, and wherever there are falling banks, there are snags to be removed from the channel. Except where the river flows at the foot of a hill, or past rocky shores, the bends succeed each other almost without interruption; and even in the straight reaches of four or five miles in length, which sometimes occur, a few snags are to be seen, which have drifted down from the falling banks above. It may in general be stated that the snags are much less numerous above Little Rock than below it; and on the sketches which will accompany this report, exhibiting in detail every part of the river, with its channels, sand-bars, shoals, reefs of rock, &c., I shall mark those bends which are particularly bad. Judging from the number of prostrate trees at some of the falling banks, which bore marks of having recently fallen, I should infer that the river acts upon the friable soil on its borders with very great force, and all observation and testimony agree in proving this to be the case.

The question of the practicability of removing these obstructions has fortunately been entirely settled by the success of Captain Shreve on the Ohio and Mississippi rivers; and as to the expediency of the measure, little doubt can be entertained, after a very slight examination of the importance of this navigation to an extensive territory, which is fast increasing in population and wealth, and which is destined very soon to be received as a State into the American confederacy. There are already five or six steamboats regularly employed in the trade of this river during the boating season, besides one or two others which make an occasional trip, and this number must soon be increased to supply the wants of a country which is rapidly filling up with emigrants. The larger class of these boats carry from 100 to 125 tons, and draw, when loaded, from four to five and a half feet of water; others draw, when light, two feet, and even less. The boating season begins late in the fall, or early in the winter, and sometimes continues without much interruption through the winter and spring and early part of summer; occasionally, however, it is subject to long and tedious interruptions, from the lowness of the water; but I believe it has rarely happened that there has not been time to transact the necessary freighting business of the country in steamboats, before the low water of the latter part of summer and autumn has suspended that kind of navigation, though trips up stream in keel-boats have occasionally had to be made at a great expense to supply some urgent demand. The best informed steamboat captains and pilots, with whom I have conversed, agree in saying that in general one foot more of water may be counted upon up to Little Rock than from thence to Fort Smith, and that in ordinary low water there is usually from two to two and a half feet on the shallow bars between Little Rock and the mouth of the river.

By the law of the 3d of July, 1832, with an extract from which I was furnished by you, \$15,000 are appointed for improving the navigation of the Arkansas, "provided the Engineer department, after due examination, is satisfied that, during a portion of the ensuing year, the men and machines now employed in removing obstructions in the Ohio and Mississippi rivers can be more usefully employed in removing those of the Arkansas river." In obedience to your instructions, I saw Captain Shreve in Louisville, Kentucky, and obtained from him the size and draught of the different boats used by him, together with much other valuable information. The Helepolis snag-boat draws about six feet of water, the Archimedes snag-boat about three feet three inches, and the double flatboats, used for pulling up snags in shallow water by manual labor, by a purchase similar to that on the snag-boats, can work in water from one and a half to two feet deep. The Helepolis probably draws too much water to be used to advantage in the Arkansas, except perhaps in the first sixty or eighty miles from its mouth at a medium stage of the river, but the Archimedes can doubtless work to great advantage for considerable lengths of time, when the Mississippi is too high to admit of work being done on it, as for instance, in June and the early part of July of this season, after Captain Shreve's return from the raft of the Red river, and the double flatboats will at all times be very efficient engines at low water.

With regard to the estimate of the expense, which I am required by your instructions to furnish, I must speak with exceeding diffidence, both from the very irregular nature of the work itself, and my own want of experience. No better method occurred to me than to endeavor to ascertain as nearly as possible the number of snags which would require removal, and to fix the cost at the same price for each that it was stated by Captain Delafield to have amounted to on the Mississippi river. This rate may be too high,

because the snags in the Arkansas are in general smaller than those in the Mississippi, or it may be too low, because there may not be the same facility in disposing of the roots of the snags in the upper part of the Arkansas that there was in the deep water of the bends of the Mississippi; experience alone, after partial trial, can lead to definite and accurate results. The water not having been quite at its lowest stage when I examined the river, I am not able to state accurately the number of snags which are in the way, but I counted all those which were visible, and made diligent inquiries of persons upon whose judgment and experience I thought I could rely, with a view to ascertain the additional allowance to be made for those concealed, and I confidently expect that the numbers which I shall give will not be found to vary materially from the truth. In Grand river, below Fort Gibson, there are numerous bad snags and logs, and in the 120 miles from the cantonment to Fort Smith I estimate the whole number to be 241. In this part of the river the steamboat *Spy* struck a snag about the 1st of April last, and was lost. From Fort Smith to Little Rock the number of snags is 502, and from Little Rock to the mouth of White river 1,356. In the Arkansas, below the cut-off, the number is 50; making the whole number 2,149, which, at eight dollars a piece, would amount to..... \$17,192 00
 Add this amount for contingencies..... 2,808 00

And we have for the whole cost of removing the snags..... 20,000 00

I have marked on the sketches three or four places where cypress stumps occur in the channel; they are considered more dangerous than snags, and the expense of their removal is included in the preceding estimate. If the snag-boats should be ordered to the Arkansas, I would recommend that the usual channel to Little Rock should first be cleared out, and that, of that part, the worst bends should be first remedied. In this way the navigation will in the shortest time receive the greatest benefit, and afterwards the other parts of the river can be cleared in regular succession.

It will be perceived that, in this estimate, I have made no provision for cutting the timber from the falling banks. Should this be thought advisable by the department, it might require, to do it thoroughly from Cantonment Gibson to the mouth, that chopping should be done over a surface equivalent to one—say two hundred miles in length by fifty yards in breadth—or 3,636 acres, which, for falling the trees from the river, and detaching the principal branches from the trunk, to prevent the tree from lodging on the bottom when floated off by high water, might cost six dollars per acre—or, for the whole, \$21,816. At present, however, I should not recommend this measure, unless the question of its efficacy is considered as having been sufficiently settled by the experience on the Mississippi. The objections which are urged against it there apply with still more force on the shallower waters of the Arkansas. I have made careful inquiries on the subject, and have found a decided feeling against the plan in the mind of every steamboat captain and pilot with whom I have conversed. It is alleged that the stumps of the trees which wash out from the falling banks, although they at first sink in the deep water of the bends, are occasionally drifted by the force of the current down to the shallow bars below, when, sitting flat on the bottom of the river, and solidly imbedded in the mud, with the stump part up, they become much more dangerous than snags, because they yield less to the force of a blow from a steamboat, and because they are concealed under the water. The pilots generally say that, as a choice of evils, they prefer that the trees should fall into the river *whole*, in order that the small proportion of them which become snags may be *seen*, and avoided, until the snag-boats in their regular trips can pull them up, and remove them out of the way. This is a question which my own observation does not enable me to decide, but at least it seems certain that, from the rapid encroachments which the Arkansas makes in its falling banks, clearing off the timber for a width of 50 yards would be but a partial remedy, and it might not be worth what it would cost.

As the general result of my examination, I would respectfully recommend to the department to issue instructions to the superintendent of the improvements on the Ohio and Mississippi rivers to commence the improvement of the Arkansas by the removal of the snags, sawyers, sunken logs and cypress stumps, and to progress with it at such times and with such force and machinery, as he shall judge fit, consistently with the terms of the law making the present appropriation, until the whole shall be completed, or the appropriation exhausted.

In conclusion, I beg to express my obligations to the many gentlemen who have, with so much readiness, furnished me with most of the information embraced in this report and the accompanying sketches.

I have the honor to be, very respectfully, your obedient servant,

T. S. BROWN, Lieutenant M. Corps of Engineers.

No. 5.

REPORT OF CHIEF OF THE TOPOGRAPHICAL BUREAU.

TOPOGRAPHICAL BUREAU, October 19, 1833.

SIR: In obedience to your instructions of the 30th of August last, I have the honor to submit to you—

1. A statement, marked A, exhibiting the amount drawn from the Treasury Department and remitted to the disbursing officers under this bureau from October 1, 1832, to September 30, 1833, inclusive, and also of the amount of accounts rendered.

2. Statement, marked B, exhibiting the amount of money drawn from the treasury under special acts of Congress for surveys, to whom remitted, and the amount disbursed.

The topographical and civil engineers have been employed upon and the funds appropriated for surveys for the year 1833 have been applied to the following objects, viz:

1. In surveying the country between the waters of St. Andrew's bay and the river and bay of Chattahoochee, and between Pensacola bay and Bon Secour, along the northern coast of the Gulf of Mexico, with a view to ascertain the practicability and cost of canals to connect said bays and rivers, under the act of Congress of July 4, 1832.

2. In surveying the route for a road in the Territory of Arkansas, from a point opposite Memphis to the house of William Strong, or some other point on the St. Francis river, under the act of March 2, 1833.

3. A brigade of engineers was directed to make a survey of White and St. Francis rivers, in the Territory of Arkansas, under the act of March 2, 1833. After repairing to Arkansas for the purpose of carrying the object of the act into effect, it was found to be impracticable on account of the rise of the waters of those rivers and the approach of the sickly season.

4. An examination of the Arkansas river, in compliance with the provisions of the act of Congress approved July 3, 1833.

5. A survey of a route for a road from Chicago, on Lake Michigan, to Fort Howard, on Green bay.

6. A survey of Portland harbor, Maine, with a view to the erection of a breakwater.

7. A survey of Provincetown harbor, Massachusetts, with a view to the erection of fortifications for its defence.

8. A survey of Throg's Point, New York, with a view to the erection of fortifications for the defence of the city of New York.

9. A reconnaissance of a route for a railroad across the southern part of the State of Vermont.

10. A survey of Burlington bay, Vermont, and Port Kent and Plattsburg harbors, New York, with a view to their improvement.

11. A survey of Vermilion river, Ohio, with a view to its improvement.

12. A survey between the Pearl and Yazoo rivers, Mississippi, with a view to their connexion by a railroad or canal; also, a survey of the Yazoo Pass, in the same State.

13. A survey of the southern shore of Lake Huron and the eastern shore of Lake Michigan, in the Territory of Michigan.

14. A survey of the Potomac river, from Georgetown to Alexandria, with a view to its improvement.

15. In completing the report and drawings of a survey of a canal route from Connecticut river to Lake Winnipisseogee, New Hampshire, by the way of the Oliverian and Baker's rivers.

16. In completing the drawings of a canal route to unite the waters of Lake Champlain with those of the Connecticut by the valleys of the Onion and Wells's rivers, in the State of Vermont.

17. In completing the report, maps, and estimates of the Taunton and Weymouth canal.

18. In completing the drawings of the reconnaissance of the sounds of North Carolina.

19. In completing the drawings of a survey in order to ascertain the military defences of St. Mary's river, Maryland.

20. In completing the drawings of a survey of Georgetown harbor, South Carolina, with a view to its military defence.

21. In making an estimate of the cost of constructing a canal to connect the waters of the Atlantic with those of the Gulf of Mexico.

22. In completing the reports and drawings of the survey for a route for a railroad from Williamsport, Pennsylvania, to Elmira, New York.

23. In completing the report and drawings of a route for a railroad from New London, Connecticut, to Worcester, Massachusetts.

24. In completing the report and drawings of a survey for a route for a railroad from the Hudson river to the Portage summit of the Ohio canal.

25. In completing the report and drawings of the survey of the Neversink river, New York.

26. In completing the report and drawings of a route for a railroad from Stonington, Connecticut, to Providence, Rhode Island.

27. In completing the surveys, reports, and estimates of a route for a railroad from Mad river to Lake Erie, in the State of Ohio.

28. In surveying the Monongahela river with a view to its improvement.

29. In superintending the construction of the Boston and Providence, Baltimore and Susquehanna, and Paterson and Hudson railroads.

30. In superintending the construction of the Potomac bridge.

31. In superintending the construction of the aqueduct across the Potomac river.

32. In paying the salaries of the civil engineers and agents employed on several of the foregoing items of duties.

Having concluded these details, allow me again to call your attention to the necessity so severely felt of a reorganization of the corps of topographical engineers.

I have had the honor previously of laying before you statements which have fully demonstrated both the economy and importance of the change proposed, and have had the satisfaction of seeing in your annual reports to the President that these expositions and recommendations met with your decided approbation. And, in addition to the reasons for this measure heretofore submitted, allow me now to add the increased necessity for an accurate survey of our extensive western lakes now so much frequented, and of which comparatively so little is known. I will also, on the same account, allude to the survey of the coast. As this work progresses, additional aid will be required, and we are at this moment without the means of furnishing to the highly scientific gentleman who superintends it the number of assistants required to prosecute the work with all the vigor which even the present condition of its operation admits.

The military committees of both houses of Congress have also for several years past reported bills embracing the most desirable views on this subject, but which, from the press of more important questions, were not prosecuted to the ultimate consummation of law. Under these circumstances, I may be pardoned for not again repeating these detailed exhibitions, and may be allowed to state, in general terms, that the present corps of topographical engineers consists of six majors and four captains. To these we have been obliged to add, by details from the army, twenty lieutenants from other corps, and also have been obliged to employ thirteen citizens in the capacity of civil engineers, who are paid out of the appropriation for surveys. And yet, for want of means, we have had to postpone surveys in several highly interesting localities.

The form of organization proposed, and which has received the sanction of the reports of the military committees, is that of a regimental organization, which has also the advantage of harmonizing with our existing military establishments, and by that will save the proposed corps from the reproach of endeavoring to obtain for itself any undue advantages in points of rank and promotion.

This organization will embrace one colonel, one lieutenant colonel, two majors, ten captains, ten first lieutenants and ten second lieutenants. To these might be attached, if required, ten brevet lieutenants from the Military Academy, according to the existing laws. And, as the duties of the corps require its members to be mounted, I will respectfully suggest the propriety of its being allowed the pay and emoluments of dragoons.

It is highly important, in a corps of this kind, that appointments in it should be made from those who have received an education adapted to its duties, and have served a probationary term. On these accounts the ten attached brevets become an interesting feature in its organization.

Allow me also to call your attention to the propriety of obtaining some authority from Congress, by joint resolution or otherwise, for diverting a part of the appropriation for surveys to geological investigations, and to the construction of a geological map of the United States. Few subjects connected with the duties of this bureau open so many and so important national advantages, or are adapted to redound more to internal commercial prosperity and to national scientific fame. It is the development of these great resources of wealth and commercial intercourse, which now lie inert and buried in the bowels of the earth, and in which the few partial investigations which have been made exhibit our country as being so extremely rich. The propriety of artificial roads and canals may in many cases be considered as entirely dependent upon them, or as the mere machinery by which they are brought into being and activity.

Already have the results of individual enterprise and scientific devotion brought much of this hidden wealth to our knowledge. But these efforts are but partial, and have their limit in the limited means of individuals. Such extensive resources as we are represented to possess in this respect can be correctly developed only by national encouragement of a regular system of scientific investigation pursued with steadiness and intelligence, and its results fairly exposed to the efforts of our enterprising countrymen.

For these purposes, permission to devote five thousand dollars per year of the appropriation for surveys will probably prove sufficient.

Respectfully submitted.

JOHN J. ABERT, *Topographical Engineer.*

Hon. LEWIS CASS, *Secretary of War.*

A.

Statement showing the amount of money drawn from the treasury and remitted to the officers and agents disbursing under the Topographical bureau, from October 1, 1832, to September 30, 1833, inclusive, and the amount of accounts rendered by each within the same period.

TOPOGRAPHICAL BUREAU, October 19, 1833

J. J. ABERT, *Topographical Engineer.*

No. 6.

REPORT OF THE PAYMASTER GENERAL.

PAYMASTER GENERAL'S OFFICE, *Washington City, November 28, 1833.*

SIR: I have the honor herewith to present a statement of the operations of the Pay department for the fourth quarter of the year 1832, and for the first, second, and third quarters of the year 1833.

From this statement it will be seen that the funds advanced to the officers of this department within the fiscal year for the payment of the regular troops and the militia, together with the unexpended balance

of previous advances, amount to \$2,288,472 54, and that but \$37,354 58 remain to be accounted for. I am officially informed that Paymaster Massias has expended the balance reported against him, and that his accounts will be forwarded in a few days, which will reduce the amount to be accounted for to \$14,701 40. This balance is in the hands of the late Paymaster Wetmore, who resigned on the 1st of May. He claims credits to which the accounting officers do not think him entitled, and will probably require the disputed items to be decided by a court of law.

The duty and responsibility of the officers of this department have been unusually heavy the past year, in consequence of being required by a late act of Congress to pay the large body of militia called into service. I was fearful that it would be impossible for the department to perform this duty without delaying settlements with the regular troops to periods that would produce serious inconvenience and much complaint, but I am happy to state that, through the ability and indefatigable exertions of the officers employed in paying the militia, the regular troops have suffered less inconvenience than was anticipated, and, in my judgment, much less than it would be prudent to expect hereafter. It therefore becomes my duty respectfully to invite your attention, and through you the attention of Congress, to this subject.

When the military establishment was reduced in 1821 fourteen paymasters were retained, and one for the engineer corps and West Point. Since then the number of troops has increased seven hundred, the number of posts is near one-third more, and the annual disbursements half a million of dollars greater than they then were, while the number of paymasters remains the same, and, in addition to the increased duty in paying the army, they are now required to pay the militia whenever called into service.

It is not in the power of the department, with the present number of paymasters, to indulge them with furloughs, as other officers are, and great inconvenience is felt if one is prevented by sickness or any other cause from performing his duty.

Under such circumstances, I earnestly solicit you, sir, to recommend to Congress to provide by law for the appointment of three additional paymasters, also to amend the law requiring paymasters to select clerks from the rank and file of the army, (where suitable qualifications cannot always be found,) and to authorize the appointment of citizens, with salaries not to exceed \$500 per annum.

Respectfully, your obedient servant,

N. TOWSON, *Paymaster General.*

Hon. LEWIS CASS, *Secretary of War.*

Statement of moneys drawn from the appropriations for the Pay department and remitted to the disbursing officers on account of payments for the 4th quarter 1833, and the first three quarters 1833; the amount unexpended and forming part of their estimates for the 4th quarter 1833; the balances to be accounted for; the periods to which the troops have been paid, and accounts rendered.

Paymasters.	Amount of funds remitted in the fourth quarter of 1833 and the first three quarters of 1833.				Amount unexpended and forming part of their estimates for the fourth quarter of 1833.				Balances remaining to be accounted for.				Periods to which the troops have been paid and accounts rendered.

* Resigned May 1, 1833.
 † Dead.
 ‡ In addition to the \$186,000, Paymaster Wright has disbursed \$60,506 62, received of Paymaster Andrews.
 § Four companies at Fort Towson paid only on May 1, it being impracticable to visit that post between that time and October 1.
 ¶ In addition to the \$50,000, Paymaster Phillips has disbursed \$50,000, received of Paymaster Andrews.

N. TOWSON, Paymaster General.

No. 7.

REPORT OF THE COMMISSARY GENERAL OF SUBSISTENCE.

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE, *Washington, November 21, 1833.*

Sir: In conformity with your instructions of the 30th August ultimo, I have the honor to present a statement exhibiting the moneys remitted and charged to contractors and to the disbursing officers of this department in the first, second, and third quarters of the year, together with the balances in possession of the latter on December 31, 1832, amounting to.....\$367,829 93
To which is to be added the amounts due them on the settlement of their accounts..... 296 66

Aggregating..... 368,126 59
The amount accounted for during the same period is..... 311,244 87

Leaving a balance of..... 56,881 72
From which is to be deducted this sum, charged to Captain James Monroe, late of
the army, being in suit.....\$4,319 94
This sum being a balance due by Lieutenant A. H. Morton December 31, 1832..... 902 85
Also this sum due by Lieut. R. W. Burnet at the period of his resignation..... 219 89

Making together..... 5,442 18

And leaving..... 51,439 54
actually in the hands of the assistant and acting assistant commissaries applicable to the expenditures of the fourth quarter of the year, and being \$14,328 60 less than the balances on December 31, 1832.

Of this sum (\$51,439 54) \$13,600 were remitted to distant posts so late in the third quarter as to render the accountability of it in that quarter totally impracticable.

In opposition to the amount charged to Captain Monroe and in suit, he alleges to have claims more than sufficient to expunge it; and should a decision of the case be favorable to government, the security given by Captain Monroe for the debt is considered perfectly ample.

The pay of Lieutenant Morton was placed under stoppage the moment that he failed to render his accounts with that regularity required by the act of Congress concerning the disbursement of public money. Should, however, the amount stopped be inadequate to cover the charge, the securities in this case, as well as in that of Lieutenant Burnet, are equivalent to the amounts due.

During the period embraced in the statement 123 officers have disbursed the moneys applicable to the commissariat, of whom there are only seven whose accounts have not been received, and they stationed at remote posts; and although it is highly probable that they may reach the office in a few days, yet their reception would not materially affect the result presented; and it is confidently believed that the operations of the year will terminate without the loss of a single cent to the government in this branch of its service.

Very respectfully, your most obedient servant,

GEO. GIBSON, *Commissary General of Subsistence.*

HON. LEWIS CASS, *Secretary of War.*

Statement exhibiting the moneys remitted to contractors from January 1 to September 30, 1833, and the moneys accounted for by them during that period; the balances in the hands of the disbursing officers of the department December 31, 1832; the moneys remitted to them in the first, second, and third quarters of 1833; the sums charged to them as transfers from one officer to another; sales to officers on the frontier posts; sales of empty barrels, boxes, &c.; and the amounts accounted for by them for the same period; together with the balances in their possession at the expiration of the third quarter of the year.

GEO. GIBSON, *Commissary General of Subsistence.*

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE, Washington, November 20, 1833.

No. 8.

REPORT FROM THE ORDNANCE DEPARTMENT.

ORDNANCE OFFICE, Washington, November 15, 1833.

SIR: In obedience to your order of the 30th August last, I have the honor to transmit a report of the general result of the proceedings and operations of this department between October 1, 1832, and September 30, 1833.

The papers marked A and B present a general view of these concerns during the last-mentioned period, as well in regard to the amounts of the expenditures under the several heads of appropriations as in reference to their objects and to the various ordnance stations where they have been made.

The first of these (A) shows the whole amount of funds remitted from the treasury to disbursing officers and contractors in this department during the year 1832 to have been.....\$869,820 36
That the portion of that sum which was expended and accounted for during the same period amounted to.....836,816 00

And that at the close of that year there remained unexpended and in the hands of disbursing officers the sum of.....33,004 36
A balance which it may be proper to remark was promptly liquidated by the responsible disbursing officers early in the first quarter of 1833.

Statement B exhibits the total amount of funds remaining in the hands of disbursing officers at the

close of the year 1832, and which have been remitted to them and to contractors during the first, second, and third quarters of the year 1833. This amount will be seen to have been.....\$806,714 28
 And the portion of this sum expended, and for which accounts have been rendered, during the same period will be seen in the same statement to have amounted to..... 732,661 05

The unexpended balance exhibited in the same statement as being in the hands of disbursing officers at the close of the third quarter of 1833 having been..... 74,053 23

Statement C presents a view of the general result of the operations at the several arsenals and armories of the United States in the manufacture, repair, and purchase of some of the principal articles of ordnance, ordnance stores, and building materials. It exhibits the result of these operations to the extent to which they have been completed during the year between October 1, 1832, and September 30, 1833, indicating among other articles of ordnance and ordnance stores which have been fabricated or procured, the following, viz:

Of artillery: 212 32-pounder cannon; 1 42-pounder casemate carriage; 1 32-pounder casemate carriage; 9 24-pounder casemate carriages; 17 24-pounder barbette carriages; 5 10-inch sea-coast mortar beds; 77 field artillery carriages, complete.

Of small arms manufactured at the national armories: 25,291 muskets, complete; 3,290 Hall's rifles.

Of accoutrements for small arms: about 4,550 sets for infantry, 2,031 sets for riflemen, and 1,260 sets for cavalry.

Statement D shows the extent of the operations during the year between October 1, 1832, and September 30, 1833, which have occurred in procuring ordnance and ordnance stores, under the act of 1808, for arming and equipping the militia of the States and Territories. This statement presents also a view of the expenditures under the act, which have resulted during the same period in procuring the stores, amounting for all objects to \$231,144 05.

It exhibits among other articles of ordnance stores procured, 67 field carriages with their implements, complete; 11,180 muskets, complete; 1,500 Hall's rifles; 4,549 sets infantry accoutrements; 1,900 sets rifle accoutrements; and 1,085 (pair) holsters.

Statement E exhibits the amount of ordnance and ordnance stores, valued in muskets, which have been apportioned for the year 1832 to the several States and Territories, under the act of 1808, for arming and equipping the militia—this apportionment being founded on the most recent returns of the strength of the militia as made by the adjutant general of the militia of the several States to the adjutant general of the army.

Statement F shows the several articles of ordnance and ordnance stores which have been distributed to the militia of the States and Territories during the year between October 1, 1832, and September 30, 1833.

Statement G presents a view of the quantity of the munitions of war issued by this department during the year between October 1, 1832, and September 30, 1833, to the army and the engineer department. In this it will appear that 28 24-pounder iron cannon and carriages, with equipments complete, 497 small arms, and 1,135 sets of infantry accoutrements, are among the principal articles issued.

Statement H exhibits the operations of the public lead mines during the year ending September 30, 1833; and statement I the quantity of lead made at these mines in each year from the year 1821 (when their superintendence was transferred from the Treasury to the War Department) to September 30, 1833.

By these statements it will appear that the quantity of lead manufactured during the last year amounts to..... 7,941,792 lbs.
 Which exceeds the production of the preceding year by..... 3,659,916 "
 That the rents which have accrued during the past year amount to..... 472,645 "
 Being an excess over the production of the last year of..... 233,747 "
 That the whole quantity of lead manufactured at the mines since their control has been transferred to the War Department amounts to..... 63,845,740 "
 And that the rents which have accrued since that period amount to..... 5,246,839 "

Of this quantity—

First. There have been issued to the engineer department to be used in the construction of the fortifications..... 2,021,702 "

Second. There are due to the United States, yet to be collected..... 211,094 "

Third. There are deposited in store at the mines..... 131,277 "

And the remainder, amounting to..... 2,882,766 "

has been issued at various periods since 1821, from the stores of the mines, for service at the armories, arsenals, and depots.

Although from this statement the utility of the mines to the government is obvious, yet the retaining possession of the lands on which they are situated is scarcely a secondary consideration when contrasted with the benefits to be derived from their permanent settlement by persons engaged in the various pursuits of life. As such settlement appears to be universally desired by the inhabitants of the mineral regions, and as it is confidently believed that the sale of the lands would cause the country to be immediately and densely settled by a population which would give confidence and security to the frontier settlement, I would therefore respectfully recommend that the earliest measures be taken for the sale of the mineral lands, and that the rights of pre-emption be secured to the present occupants.

Should it not, however, be the present policy to the government to dispose of the mineral lands, some further legislation in regard to mining will be necessary, as the act of the 3d of March, 1807, containing all the authority on the subject of lead mines, has no reference to those of copper, yet discoveries of copper ore have been recently made in the Territory of Michigan and elsewhere, and are now beginning to attract attention. And if it be thought desirable to ascertain their value, which can alone be done by practical operation, a law authorizing the mines to be leased will be necessary.

The lead mine region has been extended to the west bank of the Mississippi and greatly enlarged by the treaty of September 21, 1832, with the Sac and Fox Indians. The lands ceded by that treaty embrace the mines hitherto denominated "Dubuque's Mines," which are supposed to be rich in mineral ore, although as yet they have been but partially wrought.

The operations at the national armories and at the various arsenals of construction and deposit during the past year have been conducted with improved ability and economy, and have been followed by the most satisfactory results. This may be also said with regard to the business of collecting the materials and erecting the necessary workshops, storehouses, and magazines on the sites adopted for the

arsenal in Florida on the Apalachicola, and for the arsenal in the Territory of Michigan near the city of Detroit, which were authorized by the acts of the 5th of April and of the 28th June, 1832.

The former of these arsenals will occupy a healthful eminence on the left bank of the Apalachicola, near the junction of the Flint and Chattahoochee, and at the distance of about sixty-five miles from the mouth of the Apalachicola. It will have all the advantages of steamboat navigation to the sea-coast, and all the facilities of transportation presented by the great mail route passing the site of the arsenal and traversing the Territory from St. Augustine to Pensacola.

The new arsenal in the Territory of Michigan will be situated upon a high sandy ridge on the right bank of the river Rouge, and on the great road from the city of Detroit to Chicago. It will be built at the distance of ten miles from Detroit, and at about fifteen miles to that city by the river Rouge, which is navigable to the site of the arsenal during nine months of the year. These two arsenals are principally intended as places of deposit and repair, but they will be constructed in such a manner as to enable their operations to be so extended (whenever any emergency shall require it) as to make them also places of construction.

The arsenal on the river Rouge will be a source for supplying munitions of war to the militia and military posts of the Northwest and Michigan Territories, and to the militia of the northern parts of the States of Illinois, Indiana, and Ohio. It is intended to replace the old depot of munitions of war, hitherto inconveniently situated in the city of Detroit, and which will be abandoned so soon as the new arsenal buildings are sufficiently advanced to receive the munitions now in depot.

The superior facilities for the transportation of munitions of war which are afforded at all seasons from the city of New York to the various important points of the sea-coast; the fact that the communication by the North river with the great arsenal at Watervliet is annually closed by ice during four months of the year, joined to the absolute necessity of new buildings having due reference in their construction to the new fortifications now progressing within the harbor of New York, render it necessary to establish a small depot on Governor's island, from which supplies might be furnished to the south when the North river is closed, and which would also be adequate to all the exigencies of the service within the harbor.

The position of the St. Louis arsenal, in the State of Missouri, near the city of St. Louis, on the right bank of the Mississippi, and the advantages of communication afforded by that river and its tributary streams for the supply of munitions of war to the States on the Upper and Lower Mississippi, render it necessary that this arsenal should be one of the largest class, and that it should be accommodated with the enlarged means which are proportioned to its great natural advantages, and suited to the accomplishment of all the purposes of construction, repair, and deposit. The general arrangements for its completion have been made, and the funds necessary for the year 1834 have been asked for in the estimate.

Of the appropriation of \$100,000 for the armament of the new fortifications, which has been annually made since the year 1827, the sum of \$85,000 has been allotted to the foundries during each of the two last years, for the manufacture of cannon and artillery projectiles; while the balance (\$15,000) of the appropriation during each of those years has been assigned for the manufacture of gun-carriages, mortar beds and their equipments, for the sea-coast, and for procuring the necessary supply of timber for seasoning, that, in the event of any emergency, the operations at the arsenals for the armament of the fortresses may be extended without unnecessary delay. By this assignment of the appropriation it will yield annually about one hundred and eighty cannon of the heavier calibres, thirty sea-coast gun-carriages, with their implements and equipments, and one hundred sets of timber for the same.

It has been determined to apply a partial armament of one heavy battery to all the new fortifications which may be occupied by the army, and in the accomplishment of this object Fort Jackson, commanding the passes of the Mississippi to New Orleans, and Forts Wood and Pike, controlling those to that city by Lake Pontchartrain, have been armed each with one battery of twenty-four pounders, the same having been also effected with regard to Fort Monroe, Virginia, and to Fort Moultrie and Castle Pinckney, in the harbor of Charleston, South Carolina.

The very superior pattern, manufacture, and material of these armaments enable them to fulfil all the conditions of sea-coast defence which are required by the construction of the new fortifications.

The complete armament and equipment of the corps of artillery and infantry have been effected during the last and the present year, with small arms and accoutrements of the most recent and improved pattern, and of a superior quality of material and manufacture.

It is inferred from your letter to this office of the 23d ultimo, and from the results of the investigations you have directed to be made into the processes and practical effects of the existing system for the settlement of the property accounts of this department, that you are now assured of its inadequacy and of the utter impossibility of its attaining, without additional legislative aid, that vigor and efficiency which are so necessary to prevent extensive waste and ruin in the vast and increasing amount of public property which is intrusted to the agents of this department.

I have now the honor to submit, agreeably to your orders of the 23d ultimo, such views as may have a tendency to remedy the serious inconveniences to which your attention has been directed.

It is well known that the high state of perfection which has been attained in the settlement of all accounts of disbursements is mainly attributable to the beneficial operation of the "act concerning the disbursement of public money," approved January 31, 1823, and to that of the "act to prevent defalcation on the part of the disbursing agents of the government, and for other purposes," approved January 25, 1828. A law, therefore, applicable to the settlement of the property accounts of the Ordnance department, and similar in its provisions to this last, together with the adoption of the regulations on this subject which you have directed to be drawn up and submitted to the board of ordnance, would remedy all defects in the existing system for the settlement of the property accounts.

I have the honor to state that the new regulations which you directed to be drawn up in this office for the government of the Ordnance department have been completed, agreeably to your general instructions, after diligent investigation of the subject, and, it is hoped, in such manner as to combine all the advantages of experience and general knowledge which may be required to govern the extensive operations of this department with the necessary system, and to impress them with the requisite energy and efficiency.

Agreeably to your orders, the proposed regulations have been submitted to a board of experienced field officers of the corps of ordnance, the result of whose deliberations, after having been reviewed in this city, together with the regulations drawn up in this office, were submitted on the 1st instant for the action of the board of ordnance now assembled in this city, and of which the major general commanding the army is president. I have the honor to be, sir, your obedient servant,

GEO. BOMFORD, *Colonel of Ordnance.*

A.

ORDNANCE OFFICE, *Washington, November 15, 1833.*

No. 9.

REPORT OF THE SURGEON GENERAL.

SURGEON GENERAL'S OFFICE, *October 23, 1833.*

SIR: In compliance with your instructions, I have to state the amount drawn and remitted to the acting apothecary at New York during the first three quarters of this year has been \$3,700; the amount of accounts rendered and settled in the same period has been \$6,458.

There has been, during the same period, advanced to the officers of the Quartermaster's department, on account of the Medical department, \$7,804 72, for which accounts have been rendered and settled to the amount of \$4,460 47.

Very respectfully, your obedient servant,

JOS. LOVELL, *Surgeon General.*

HON. LEWIS CASS, *Secretary of War.*

No. 10.

REPORT OF THE COMMISSARY GENERAL OF PURCHASES.

COMMISSARY GENERAL'S OFFICE, *Philadelphia, October 10, 1833.*

SIR: In obedience to your instructions, dated on the 26th of April and 27th of September, 1833, I have prepared and have now the honor of enclosing my moneyed estimates for 1834, marked A and B, as follows, viz:

A. For clothing, camp equipage, &c., for one year, ending October 31, 1835.....	\$280, 748 01
B. For the expenses of the Commissary General's office for the year 1834.....	7, 050 00
Total.....	<u>287, 798 01</u>

I likewise enclose six statements, Nos. 1 to 6, prepared by order of the War Department, as follows, viz:

No. 1. Of moneys drawn from the appropriation for the Purchasing department (for 1833) during the first three quarters of 1833.

No. 2. Of moneys received and disbursed during the first three quarters of 1833, on account of the Purchasing department.

No. 3. Of moneys received and disbursed during the first three quarters of 1833, on account of furnishing the regiment of United States dragoons with clothing, equipments, &c.

No. 4. Comparative statement of the cost of clothing, &c., for the United States army during the years 1832, 1833, and 1834.

No. 5. Statement of the cost of clothing for the United States army during the year 1834.

No. 6. List of persons employed in the Purchasing department during the year 1833, showing the amount of compensation allowed to each, and the State or country in which he was born.

I have not deemed it safe to make any deduction from the moneyed estimate for supplies of clothing, &c., that may remain on hand after the issues for this year have been made, not knowing to what extent orders may have to be drawn on the supplies in store and to be in store previous to the termination of the year.

The orders for the recruiting service, in addition to the full supplies for the respective regiments, having greatly increased the issues beyond the amount anticipated, leaves a doubt on my mind as to the propriety or safety of making any deduction.

A difference between the cost of some articles of clothing (particularly coats) will be observed in favor of the provision for 1834. The alteration of the uniforms obliged me to pay a high price for those to be provided for 1833. The time and experience afforded by the period of one year has enabled me to reduce the cost of the coats from 62 cents to 70 cents each.

If any further information is necessary in relation to statement No. 6, I beg leave to refer you to my communications to General Wool and to Major Garland, dated April 9 and 12, 1833.

I have the honor to be, sir, with high respect, your most obedient servant,

C. IRVINE, *Commissary General of Purchases.*

Hon. LEWIS CASS, *Secretary of War.*

P. S. The duplicates will be forwarded early next week.

Report from the Clothing bureau.

CLOTHING BUREAU, *Washington*, December 2, 1833.

SIR: I have the honor to report that the clothing furnished the army for the year commencing November 1, 1833, is of greatly superior quality to any which has heretofore been issued, and that the cost has not materially varied. In 1830 the cost of a soldier's clothing per year was \$31 29; in 1832, \$30 55, and in 1834 it will be \$30 93.

I am informed by the commissary general of purchases that owing to a rise in woollens and the large quantity required to be provided in consequence of a change of uniform, the effect has been not only to keep up the price of clothing but to prevent a portion of the troops from receiving an adequate supply as early in the season as has been customary.

It is proper to remark that the new uniform has given general satisfaction, both as to style and convenience, so far as information has been received at this bureau from the military posts.

Very respectfully, I have the honor to be, your obedient servant,

JNO. GARLAND, *Major, United States Army*.

Hon. LEWIS CASS, *Secretary of War*.

[1ST SESSION.]

TRANSFER OF APPROPRIATION FOR THE ARMY FROM THE SUBSISTENCE TO THE MEDICAL DEPARTMENT.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 9, 1833.

To the House of Representatives:

I transmit herewith to the House of Representatives a communication from the War Department, showing the circumstances under which the sum of \$5,000, appropriated for subsistence of the army, was transferred to the service of the medical and hospital department, and which, by the law authorizing the transfer, are required to be laid before Congress during the first week of their session.

ANDREW JACKSON.

WASHINGTON, December 6, 1833.

WAR DEPARTMENT, *December 6, 1833.*

SIR: I transmit herewith a letter received from the surgeon general, dated 11th November ultimo, showing the necessity of a transfer of \$5,000, funds for the service of the medical and hospital department, and for what objects it is designed. Also, a letter from the Second Comptroller, dated 5th instant, stating that the transfer has been made accordingly from the appropriation for "subsistence of the army," under the authority vested in the President of the United States by the acts of 3d March, 1809, and 1st May, 1820, to be laid before Congress during the first week of their session, as required by the first-named act.

Very respectfully, your most obedient servant,

LEWIS CASS.

The PRESIDENT of the *United States.*

SURGEON GENERAL'S OFFICE, *November 11, 1833.*

SIR: The payments to private physicians having exceeded the amount estimated for the current year in consequence of the number necessarily employed to accompany detachments on the march and at the military posts, chiefly from the prevalence of the cholera on the southern and western frontiers, an estimate has been made for arrearages of the Medical department to the amount of \$5,000; and as this sum will be required to meet current expenses, I have to request that, agreeably to the 5th section of an act approved May 1, 1820, a transfer of that amount may be made from the appropriation for "subsistence of the army," to that for "medical and hospital department," having been informed that the state of the former appropriation will admit of such transfer.

Very respectfully, your obedient servant,

JOS. LOVELL, *Surgeon General.*

Hon. LEWIS CASS, *Secretary of War.*

TREASURY DEPARTMENT, *Second Comptroller's Office, December 5, 1833.*

SIR: The President of the United States, under the authority vested in him by the acts of 3d March, 1809, and 1st May, 1820, did, on the 22d November last past, by transfer appropriation warrant No. 1, direct a transfer to be made of the sum of five thousand dollars (\$5,000) from "subsistence of the army," to "medical and hospital department." The first-named act requires that a special account of moneys thus transferred shall be laid before Congress during the first week of their next ensuing session. I have, therefore, the honor to report to your department the fact of the transfer.

I am, very respectfully, sir, your obedient servant,

J. B. THORNTON.

Hon. LEWIS CASS, *Secretary of War.*

[1ST SESSION.]

APPLICATION OF NEW HAMPSHIRE FOR A MORE PERFECT AND UNIFORM ORGANIZATION OF THE MILITIA OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 12, 1833.

Resolved by the senate and house of representatives in general court convened, That the organization of the militia of the United States, being a matter entrusted by the Constitution to the general government, requires its attention, and can be only and efficiently and satisfactorily done by that government.

Resolved, That our senators in Congress be, and are hereby, instructed, and our representatives requested, to use their exertions to procure the passage of a law providing for a more perfect and uniform organization of the militia of the several States of the Union.

Resolved, That his excellency the governor of this State be directed to transmit to each of our senators and to our representatives in Congress a copy of the foregoing resolutions, and also a copy to the governors of the other States in the Union, with a view that the same may be submitted to their different legislatures.

Approved July 5, 1833.

No. 554.

[1ST SESSION.]

THE RIGHTS OF A SOLDIER NOT INVALIDATED BY APPEARING ON RETURNS AS HAVING
"DESERTED," THERE BEING PROOF OF HIS RETURN TO THE ARMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 19, 1833.

Mr. WARD, from the Committee on Military Affairs, to whom was referred the resolution requiring the committee to inquire into the expediency of granting a land warrant to the widow and children of George Ludlum, deceased, a soldier of the late war, reported:

That this subject has before been submitted to them, and that on the 21st day of January, 1833, they made upon it a favorable report, to which they now refer, as expressing, in detail, the reasons upon which that report was founded.

JANUARY 21, 1833.

The Committee on Military Affairs, to whom was referred the resolution requiring the committee to inquire into the expediency of granting a land warrant to the widow and children of George Ludlum, deceased, a soldier of the late war, submit the following report:

It appears from the certificate of the adjutant general, bearing date the 7th day of April, 1832, that George Ludlum enlisted as a private in Captain Van Buren's company of the 29th regiment United States infantry, on February 10, 1814, for the period of during the war, and that he is entered on the inspection returns of said Van Buren's company as having deserted on April 28, 1815.

It also appears from the certificate of Lieutenant Burr, of said regiment, bearing date June 13, 1815, that said Ludlum was absent, without leave, at the time the troops were paid off and discharged, but that he returned to Plattsburg a short time afterwards. It also appears that said Ludlum died some time after the close of the war, leaving a widow and several children.

The committee are of opinion that, as said Ludlum continued in the service until after the close of the war, and as he returned to Plattsburg a short time after the troops had been paid off, it is manifest he did not leave the service with a view of deserting, and they therefore consider that he was entitled to his discharge, and have reported a bill for the relief of his widow and children.

ADJUTANT GENERAL'S OFFICE, Washington, April 7, 1832.

By the inspection returns of Captain Van Buren's company of the line, 29th infantry, for February, 1815, it appears that George Ludlum, a private, enlisted on the 10th day of February, 1814, to serve during the war, and was then present. The inspection returns for April, 1815, report him to have deserted on April 28, 1815.

R. JONES, *Adjutant General.*

CAMP PLATTSBURG, March 20, 1815.

George Ludlum of the 29th regiment, Captain Van Buren's company, has permission to pass and repass the guards from the date hereof until further orders, being on duty regulated by me.

S. BURR, *Lieutenant 29th Infantry Commanding Company.*
ROCHESTER, *Captain 29th Company.*

PLATTSBURG, June 13, 1815.

This is to certify that George Ludlum, a private, formerly belonging to Captain Van Buren's company of the 29th infantry, is discharged from the armies of the United States; he being absent without leave at the time the company was paid off, is the reason that he has not a regular discharge.

S. BURR, *Lieutenant of 29th Infantry.*

I certify that I held the office of captain in the 29th regiment United States infantry during the late war, and was well acquainted with said Ludlum; and I further certify that he died some time after the close of the war, leaving a widow and several children.

A. WARD, *M. C.*

[1ST SESSION.]

APPLICATION OF MISSOURI FOR THE ESTABLISHMENT OF A DEPOT OF ARMS NEAR THE NORTHWESTERN BOUNDARY OF THAT STATE.

COMMUNICATED TO THE SENATE DECEMBER 23, 1833.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

Your memorialists, the general assembly of the State of Missouri, would respectfully represent: That the exposed and unprotected frontier of this State lying west and north is an object of great anxiety to your memorialists. Rumors of Indian hostilities are unceasingly coming to our ears. Our Indian war is scarcely over before we are alarmed with the portentous news that the savages are making preparation for another. Our frontier inhabitants are unprotected, and deficient in arms and other munitions of war. They have not the means of protecting themselves against a sudden incursion of the savages. We respectfully ask, therefore, that the means of self-defence be placed within their reach, and that a depot of arms and the necessary munitions of war be located by Congress on the Upper Missouri and Mississippi rivers, at or near the northwestern boundary of the State. Such an auxiliary in time of war could not fail to afford a speedy and effectual succour, and in time of peace would greatly tend to restrain and preserve within proper bounds the turbulent and revengeful spirit of the border Indian tribes.

All which is most respectfully submitted.

Resolved, That the secretary of state forward to our senators and representatives in Congress copies of the foregoing memorial, in order that the same be presented forthwith to that honorable body for their consideration.

Approved February 12, 1833.

STATE OF MISSOURI:

The foregoing is a correct copy of the original now on file in the office of secretary of state of the State aforesaid.

In testimony whereof, I have hereunto set my hand and affixed my official seal the 15th day of [L. s.] November, A. D. 1833.

JOHN C. EDWARDS, *Secretary of State.*

23^D CONGRESS.]

No. 556.

[1ST SESSION.]

APPLICATION OF NEW YORK FOR AMENDMENTS TO THE MILITIA SYSTEM OF THE UNITED STATES.

COMMUNICATED TO THE SENATE DECEMBER 24, 1833.

RESOLUTIONS of the legislature of New York, to obtain such amendments of the militia system as may lessen its burden without impairing its efficiency.

The Constitution of the United States gives to Congress the power to provide for organizing, arming, and disciplining the militia. In pursuance of this grant of authority an act of Congress was passed on the 8th May, 1792, entitled "An act more effectually to provide for the national defence by establishing a uniform militia throughout the United States."

Under the provisions of this act every able-bodied free white male citizen between the ages of eighteen and forty-five years is required to be enrolled in the militia, and to provide himself with the necessary arms and equipments.

The condition of the country at that epoch in the history of the Union was such as to render an extensive enrolment indispensable. The federal government had but just gone into operation; our frontiers were exposed to the incursions of numerous Indian tribes; our population was thin and scanty when compared with the vast surface over which it was spread, and there was cause to apprehend that our dissensions with Great Britain, in consequence of the existence of unsettled questions between the two countries, might be revived. Under the influence of these impending dangers the militia system was framed and established, and, as might have been expected from the state of the country, its leading feature was an extensive enrolment.

Since the law of 1792 no act of Congress has been passed materially altering its provisions. On the other hand, the state of the country is totally changed. The sources of danger are diminished, and are more remote. The Indian tribes which hung upon our frontiers at the organization of the federal government have either migrated to more distant regions or have been subdued by the joint force of civilization and physical power. Our population is comparatively dense and powerful. We have no existing differences with foreign countries which are likely to lead to a breach of our relations of friendship with them.

Under this change of circumstances a less extensive enrolment would seem adequate to all the objects for which a militia is maintained. While the committee express this opinion, they wish to be understood as advocating no change in the militia system which would have the effect of impairing its efficiency. They consider it as intimately connected with the maintenance of our internal tranquility, and with the

preservation of that spirit of freedom on which the durability of our political institutions essentially depends. Every citizen is, from the nature of our social organization, a part of the public defence; and he is also, in the last resort, in common with his fellow-citizens, the safeguard of the liberties of all against the government itself. Thus it is that amendments to the Constitution of the United States have provided that "the right of the people to keep and bear arms shall not be infringed." It seems indispensable to the accomplishment of the objects referred to that every citizen should be armed, and that he should be subjected for a course of years to a system of exercise and discipline. The system should be limited in its application to such a period as will be sufficient to qualify those subjected to it for acting in concert and with efficiency on sudden emergencies until a more permanent force can be provided.

This object may be attained consistently with that of reducing the period of enrolment, and consequently diminishing the numerical force of the militia. For instance, if the enrolment in this State were to be diminished so as to include only such persons as are between the ages of twenty-one and forty years, our numerical force would be reduced from about 190,000 to about 140,000 men, and yet every citizen would pass through nineteen years of military discipline. As has already been observed, the act of Congress of 1792 requires every citizen duly enrolled to provide his own arms and equipments. This your committee consider wrong in principle and oppressive in practice.

In the price of arms the rich and the poor are required to pay the same amount. The contribution is a poll-tax, having no reference whatever to property. The personal service which every citizen renders is, of necessity, equal, as it is not capable of apportionment between individuals; and it may be considered just, because the personal rights of all are equal. But in providing arms and equipments every citizen renders a pecuniary service; and to make the contribution just, it should be apportioned upon the basis of property.

The established system is as unjust in principle as a rule of taxation which should require every citizen, without regard to his pecuniary ability, to contribute ten dollars, or any other specific sum, to the expenses of government. The injustice of the system is acknowledged by the act of Congress of 23d of April, 1808, which provides for arming and equipping the whole body of the militia of the United States by appropriating annually \$200,000 to that object. But although the principle for which the committee contend is admitted by this act, the provision which it makes is wholly inadequate to the object in view.

The defects in the established militia system, to which the committee have referred, are wholly beyond the reach of the legislative authority of the State. They can only be remedied by an amendment of the act of Congress of 8th of May, 1792; and although that part of the Revised Statutes which relates to the militia and the public defence is susceptible of some improvement, no alteration can be made in it which would have the effect of relieving the great body of the militia from any portion of the burden of military service.

The committee have, therefore, not deemed it advisable to report a bill providing for amending the Revised Statutes so as to remedy the inconsiderable defects which can be reached by our legislation; but they would respectfully suggest the adoption of a resolution instructing our senators and requesting our representatives in Congress to use their exertions to procure such amendments of the act of 8th of May, 1792, as shall provide for the existing deficiencies in the established organization of the militia without impairing its usefulness and strength.

STATE OF NEW YORK.

IN ASSEMBLY, April 10, 1833.

Resolved, (if the senate concur,) That our senators in Congress be instructed, and our representatives be requested, to use their exertions to procure such amendments of the act of Congress organizing the militia as shall relieve the people as far as practicable from the burdens of the system without impairing its efficiency.

Resolved, (if the senate concur,) That his excellency the governor be requested to transmit copies of these resolutions and report to our senators and representatives in Congress, and also to the governors of the several States, with a request that they may be laid before the legislatures thereof.

By order:

WILLIAM BAKER, *Speaker pro tem.*

Attest:

FRANCIS SEGER, *Clerk.*

IN SENATE, April 13, 1833.

Resolved, That the senate do concur with the assembly in their said resolutions.

By order:

JOHN TRACY, *President.*

Attest:

JOHN F. BACON, *Clerk.*

[1ST SESSION.]

ON CLAIM OF OFFICERS, NON-COMMISSIONED OFFICERS, AND PRIVATES OF THE ARMY FOR LOSSES SUSTAINED BY THE BURNING OF HANCOCK BARRACKS, IN MAINE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 31, 1833.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred the memorial of sundry officers of the United States army stationed at Hancock barracks, in Maine, reported:

The petitioners set forth that, in consequence of one of the public barracks occupied by them having been destroyed by fire on the 10th of February, 1833, they sustained a considerable loss of furniture and personal apparel; that this loss was greatly increased by their personal exertions having been principally directed

to the preservation of the other buildings, and for which purpose the carpets and blankets belonging to both officers and men were used, and partially or wholly destroyed; that by these means and with great labor they were successful in saving the public property, at the great sacrifice of their own; and they further state that many of the non-commissioned officers and men of the command sustained a loss of clothing; for all which damage they pray for remuneration. The committee do not deny the facts set forth in the memorial, but believe them to be true; and they also are happy to find that the meritorious conduct of the officers was such as might have been anticipated. But, admitting all this, the committee cannot recognize the principle of remuneration in cases of ordinary fire or conflagration of the public barracks occupied by our troops: Therefore—

Resolved, That the prayer of the petitioners ought not to be granted.

[1ST SESSION.]

ON THE CLAIM OF GENERAL ALEXANDER MACOMB FOR ALLOWANCES AND PAY UNDER HIS BREVET RANK.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 8, 1834.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred the petition of General Alexander Macomb, reported:

That the petitioner claims certain allowances of pay under his brevet rank as major general which have never been allowed to him, but which he alleges have been allowed to others under similar circumstances, upon a fair construction of the laws regulating such matters. The committee do not conceive it to belong to them to undertake to give a construction to the laws on the subject of pay under brevet rank; that belongs to the accounting and executive officers of the War Department; and if General Macomb is entitled to relief under those laws, it is competent for the Secretary of War to grant him such relief as others have received under similar circumstances. The committee ask to be discharged from the further consideration of the subject, and that the petition and papers be referred to the Secretary of War for adjustment upon the same principles that have regulated similar allowances to others: Therefore—

Resolved, That the committee be discharged from the further consideration of the subject, and that all the papers be referred to the Secretary of War.

[1ST SESSION.]

APPLICATION OF ARKANSAS FOR A REMOVAL OF THE TROOPS FROM FORT GIBSON TO FORT SMITH.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 13, 1834.

MEMORIAL.

To the President of the United States:

The memorial of the general assembly of the Territory of Arkansas would respectfully represent: That the troops at Cantonment Gibson are of little or no utility to the citizens of the Territory, situated as they are within the confines of an Indian country. Should the citizens on and along the western line of the Territory be invaded by a savage foe, all communication between them and the troops at the cantonment could be intercepted, and before the troops could afford them any assistance their property would be plundered and their houses desolated. In the establishment of the garrison the government believed that they were affording full and ample security to the property and lives of the frontier people, and that it would aid in preserving peace among the Indian tribes. Even to the superficial observer it certainly must be manifest that their removal would greatly conduce to the safety of the frontier settlers, and it cannot reasonably be believed that it would have an injurious effect on the wise and humane policy of the general government in its effort to preserve peace among the Indians.

These were the main objects for the establishment of that garrison; and when it is recollected that but for the late Cherokee treaty the white settlements would have been adjacent to it, and that one of those objects can be better subserved by a removal to a point within the vicinity of the white settlements, your memorialists cannot but indulge a confident hope that the removal will be made. Your memorialists believe that old Fort Smith is the most eligible site, but there are others on the Arkansas river, within the vicinity of that place, which, upon an examination, might prove to be equally, if not more eligible than that place. Let the question be settled that the main objects of the government could be effected as well by a removal of the troops as by their continuation where they now are, and there are other

reasons so manifestly obvious why the removal should be made as to leave no doubt upon the mind of your memorialists of its expediency.

Fort Smith is the highest point of safe navigation on the Arkansas. At times of low water the public stores are transported from thence to the garrison with much trouble and great expense. Besides these two considerations, the supplies could be furnished by the citizens of the Territory much cheaper than they now are, as then they would have no Indian country to traverse.

These are the inducements which would tend to the benefit of the general government, and they appear to have sufficient weight to claim its consideration. To the citizens of the Territory the removal would be greatly beneficial in a commercial point of view, as it would open and afford to them a market for all their surplus produce. When your memorialists reflect that great advantages must and will result to the general government from the proposed measure, and that nothing would so much contribute to the safety of the western frontier people and their advancement in wealth, they cannot believe that an administration characterized by so many wise and benevolent acts will long hesitate in the performance of a measure against the practicability of which no reasonable argument can be urged.

JOHN WILSON, *Speaker of the House of Representatives.*

JOHN WILLIAMSON, *President of the Legislative Council.*

No. 560

[1st Session.]

ON CLAIM OF DAVID KILBOURN FOR INDEMNITY FOR PROPERTY CONFISCATED IN CANADA, IN CONSEQUENCE OF HIS ACTING AS A SPY FOR THE AMERICAN ARMY DURING THE WAR OF 1812-15.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 14, 1834.

Mr. THOMSON, of Ohio, from the Committee on Military Affairs, to whom was referred the petition of David Kilbourn, reported:

That on a careful examination of all the papers pertaining to this case, they find that on the 25th day of January, 1830, the petition of David Kilbourn was referred to the Committee of Claims; that on the 8th day of February following that committee was discharged from the further consideration of the claim, and it was referred to the Committee on Military Affairs; that on the 12th of that same month a bill was reported in favor of the petitioner, but did not pass at that session.

On the 12th of December, 1831, the subject was again referred to the Committee on Military Affairs, and that committee reported a bill for the partial relief of the petitioner on the 27th of the same month, but which did not pass until the — day of —, and only gave to the petitioner one thousand dollars as a consideration for his personal services and sufferings, but made no allowance for the losses and damages he sustained in the destruction and confiscation of his property, and that only for want of proof of a strictly legal character, as to the amount, value, and confiscation thereof, as will appear by a reference to the report of the Committee on Military Affairs made at that time, which report your committee now request may be taken and considered as a part of this report, and which is as follows:

FEBRUARY 12, 1830.

The Committee on Military Affairs, to whom was referred the petition of David Kilbourn, report:

That the petitioner sets forth that he is a native citizen of the United States, within which he remained until after the termination of the revolutionary war, when he removed into Upper Canada; that although residing in that province, his attachment to his country was undiminished, and he was always desirous of promoting its interests; that in the year 1813, at the solicitation and by the authority of General Wilkinson, then commanding officer of the American army upon the northern frontier, he engaged to examine secretly the British posts in Canada, to procure accurate information of their numbers and position, and to communicate the result to the American commander; that he executed this commission to the entire satisfaction of General Wilkinson, by whose agent he was promised ample compensation for his services, and indemnity against any loss which he might suffer for having undertaken them; that the enemy, having been informed of the petitioner's employment and acts, apprehended him, confined him in prison, treated him harshly, and purposed putting him to death, when he made his escape; that he was again taken, again subjected to similar ill treatment, and again threatened with death, which would inevitably have been his portion had he not a second time effected his escape; that after his escape he repaired to General Wilkinson's camp at the French Mills, who renewed to him his former promises, furnished him with money to defray his expenses to Sackett's Harbor, and recommended him to the quartermaster at that post, who employed the petitioner in his office; that from ill health he was obliged to relinquish this situation, since when he has resided in the State of New York, where he is now living under the complicated burdens of old age, infirmity, and indigence; and that since his compulsory abandonment of Canada, his property there, which he valued at ten thousand dollars, has been confiscated, and its proceeds paid into the provincial treasury. Under these circumstances, he prays that he may be compensated for his services, and indemnified for the loss of his property.

That such services as were performed by the petitioner would, if discovered, expose him to the penalty

of death, no other testimony is requisite to establish than the universal and well-known practice of nations in similar cases; that he did perform these services faithfully, and that they were highly useful and important, is proved most fully and satisfactorily; and that justice and policy would dictate that he should be liberally remunerated for them is unquestionable. It must be recollected that the petitioner was not a traitor to his country when he penetrated into the British encampments, but an American citizen. Had he been a traitor, whatever odium might have been attached to his conduct, our government would have been bound to reward his treason. The committee feel no hesitation in awarding to him what they consider to be a compensation for his services and the personal perils to which they exposed him, and for that purpose they report a bill. They entertain as little doubt as to the justice and policy of indemnifying the petitioner for any property which he lost by the execution of his dangerous commission; but as the testimony submitted to them is defective, both as to the value of the property which he alleges to have been confiscated and its confiscation, they recommend that no further allowance be made to him until he produces stronger evidence to substantiate these facts than the committee have been furnished with.

In the present state of this case, and from the view taken of it in the above report, your committee, to whom the subject has now been referred, believe that it is with the loss of property and consequent damage alone which the petitioner has incurred that they have now to do, and have therefore turned their attention entirely to those points in his case.

From an exemplification of the recorded proceedings had in the confiscation of the petitioner's real estate in Upper Canada, duly authenticated, now in possession of your committee, as well as an attested copy of the law of that province under which said confiscation was carried into effect, there can be no doubt as to the confiscation of the real estate of the petitioner. Your committee are therefore of opinion the fact of confiscation is fully established.

From the testimony of sundry credible persons as to the value of said real estate, as well as the value of the personal property of the petitioner, which he lost in consequence of his services rendered to the United States, as set forth in his petition, your committee are of opinion is fully made out and established; and although those persons differ in opinion as to the amount of the value, yet they all agree that it was valuable, and that the real estate is now much more valuable than at the close of that war.

The petitioner sets forth that he was at that time possessed of five hundred acres of back lands, as he styles them; but there is no evidence before your committee which goes fully to establish that fact, nor is there any record of their confiscation with his homestead farm, which is described in the exemplification above alluded to by metes and bounds most minutely. It is therefore to be understood that the committee, in making up their decision in this case, have not taken those back lands into the calculation.

That the petitioner faithfully fulfilled his engagement with General Wilkinson, and that to the entire satisfaction of the general, is abundantly proven by the testimony of General Smith, who, it appears, was the chief engineer, and agent for General Wilkinson to make said contract with the petitioner, and who did make it. Your committee are therefore of opinion that justice to the petitioner, as well as a matter of sound policy on the part of this government, requires and demands that Congress should make good all such contracts made by their generals, when there is no fraud made to appear.

The principle involved in this case, and at which some persons may be disposed to cavil, your committee will state, so far as they have examined and are informed, is by no means new; for the policy of the United States in remunerating refugees from the enemy for their losses began with the government, and has continued with its progress up to the present time. The promises made in the revolutionary war to the refugees from Nova Scotia and from Canada have been fulfilled by repeated acts of Congress since that period, and since the last war both land and money have been given to Canadian volunteers who were American born, and who suffered in their persons or in their property, or both, in the service of the United States.

Your committee are therefore of opinion that the government ought to make good its contract with this petitioner, and allow him remuneration for the damage he has suffered in its service, and have therefore reported a bill for his relief; but in so doing they have taken the lowest estimate as to the value of his property, both real and personal, that has been made under oath by persons of good character testifying thereto in the most solemn manner.

Certificate of Major General Brown in relation to David Kilbourn.

I knew David Kilbourn well as a settler in Upper Canada before the last war. He had a fine farm situated on the banks of the St. Lawrence, about eight miles above Ogdensburg. He always bore a good character, and was considered as a substantial and industrious farmer.

During the war he was, to my knowledge, employed on secret service to discover the force of the British at Montreal and at places on the St. Lawrence. In this business he was very faithful and active; and, while living in Canada as a man of character, he was able to collect much valuable information.

On the expedition down the St. Lawrence in November, 1813, just before we passed Prescott, Kilbourn came to me and gave me a minute statement of the force and position of the British at Montreal and at other posts, which, as I had afterwards means of ascertaining, was remarkably faithful and correct.

I knew of Kilbourn's detection by the British government, and of the total ruin which followed this discovery of the services he had rendered to the American army.

JACOB BROWN.

HEADQUARTERS, Washington, January 27, 1827.

UPPER CANADA, *District of Johnstown, County of Leeds:*

Henry Jones, of the town of Brockville, township of Elizabethtown, in said county, merchant and postmaster at Brockville, duly sworn, says that he has resided for the last twenty-seven years in Brockville aforesaid, and during that time has been acquainted with the premises described as west half of lot No. 4, and east half of lot No. 5, in the first concession of said township, lying eighty rods in width on the river St. Lawrence, and extending in the rear so as to make two hundred acres of land, crossed by

the main road leading from Kingston to Montreal, and being about one and a half mile below the town of Brockville, being the same premises formerly owned and occupied by David Kilbourn, who left Canada during the late war with the United States. At the time said Kilbourn left Canada said premises comprised about one hundred acres or more of improved land, well fenced and under cultivation, the residue woodland; a dwelling-house some twenty-six by thirty-six feet, according to deponent's judgment, (having never measured the same,) two stories high, finished and painted; a building, he believes, about thirty feet square, used as a stable for horses, and for housing farming utensils, &c.; also a barn, forty feet or more in length. At the time of the late war, or immediately after, said premises, including permanent improvements, were worth, in my judgment, two thousand dollars. They have since increased in value, and, without any increase in the value of the improvements, are now worth, in my judgment, three thousand dollars. The woodland is now worth five pounds, Halifax currency, per acre.

HENRY JONES.

Sworn before me, at Brockville, 26th October, 1832.

JAMES MORRIS, *Justice of the Peace.*

UPPER CANADA, *District of Johnstown, County of Leeds:*

Charles Dunham, of the town of Brockville, township of Elizabethtown, in said county, and for a long time a merchant and innkeeper in said town, duly sworn, maketh oath and saith: That he is now 50 years old and upwards; has resided in said town of Brockville for 23 years and upwards last past, and during that time has been acquainted with the premises described as west half of lot No. 4, and east half of lot No. 5, in the first concession of said township; lying 80 rods in width on the river St. Lawrence, and extending in the rear so as to make 200 acres of land; crossed by the main road from Kingston to Montreal, and being about one and a half mile below said town of Brockville, and being the same premises formerly owned by David Kilbourn, who left Canada during the late war with the United States. At the time said Kilbourn left Canada said premises comprised about 100 acres or more of improved land, well fenced, and under good cultivation, the residue woodland; a dwelling-house about 26 by 36 feet, two stories high, well finished and painted; a building, he believes, about 30 feet square, used for a stable for horses and for housing farming utensils, &c.; also a barn, he believes, between 40 and 50 feet in length. At the time of said war, and immediately after, said premises, in deponent's judgment, were worth \$2,000. They have since increased considerably in value, and, without any increase in the value of the improvements, are now worth, in the opinion of this deponent, full \$3,000. The woodland is now worth \$20 per acre, and perhaps more.

CHARLES DUNHAM.

Sworn before me this 26th day of October, 1832, at Brockville.

ALEXANDER MORRIS, *Justice of the Peace.*

I certify that I have known Charles Dunham for upwards of 20 years, and consider him a person whose veracity may be relied on.

ALEXANDER MORRIS, *Justice of the Peace.*

BROCKVILLE, October 26, 1832.

STATE OF NEW YORK, *Oswego County, ss:*

George Fisher, of Oswego, in said county, counsellor-at-law, duly sworn, on oath says: That he has been acquainted with David Kilbourn, of Senba, in this county, for several years—he believes about seven; during that time said Kilbourn has sustained the character of an upright and honest man; during that time, and, as deponent has learned from his neighbors, for twelve years previous, he has been apparently very poor and destitute, until he received some aid from the government during the last summer. Some five or six years since he applied to deponent to aid him in obtaining a claim which he had on the government, and, after learning the particulars of his case, deponent aided him in procuring testimony to establish his claim, which was forwarded to Washington to be laid before Congress; but little or no progress was made in obtaining a decision until the session of 1829–30, when the papers were again presented and referred to the Committee of Claims, of which the honorable Mr. Whittlesey was chairman. After some examination of the case was had, this deponent was advised by Mr. Whittlesey that, although his claim for losses *might* be just, and such as ought to be allowed, yet he deemed the proof defective in two respects: 1st. That a copy, or other satisfactory proof, of the proceedings in Canada against Kilbourn's estate should be produced, as it was believed it might be; 2d. That the *items* and the amount of *each item* of loss was not sufficiently stated and ascertained by the proof, so as to enable the committee to come to a satisfactory conclusion. Under these circumstances, Mr. Whittlesey advised this deponent that, as the service which had been rendered was probably important to the army as well as hazardous to Kilbourn, he thought a liberal allowance should be made on account of the *services* rendered, and the compensation for *losses* sustained might be left for a future application, when the defect in the proof on the two points specified might probably be supplied. Mr. Whittlesey further suggested to deponent that, as the *services* and the compensation proper to be allowed therefor concerned more particularly the policy of the army, it would be proper to have the papers referred to the Military Committee, to whose jurisdiction such a question more properly belonged. To this advice and these suggestions this deponent assented, and the papers were accordingly, on motion of Mr. Whittlesey, transferred from the Committee of Claims to the Military Committee, who promptly reported a bill allowing Mr. Kilbourn \$1,000 for his *services*. This bill failed in the Senate, as deponent understood, for want of time. *Such* a bill finally became a law, as deponent is informed, at the last session.

Deponent has been an agent in procuring for Kilbourn the desired proof from Canada, but has experienced much difficulty and delay in obtaining it. In order to effect what seemed not likely to be accomplished in any other way, deponent, during the month, (October, 1832,) made a journey to Canada, and

obtained, without much difficulty, a copy of certain proceedings against said Kilbourn's estate; but deponent found it more difficult to obtain testimony of other facts not of record, such as related to the value of property, the items and value of personal property held by Kilbourn, and the description and value of Kilbourn's "back lands." Several respectable gentlemen in the village of Brockville, apparently well acquainted with Mr. Kilbourn and with his former circumstances in Canada, and who gave Mr. Kilbourn an excellent character in all respects, *excepting only the circumstances attending his leaving Canada*, stated very freely in conversation Mr. Kilbourn's circumstances and property while in Canada, with which they appeared to be well acquainted, and yet refused to give any affidavit or other *written* statement which might be used to aid Mr. Kilbourn. From all that deponent could learn, it appeared that Mr. Kilbourn's personal property, or a large portion of it, especially such as consisted of stock, hay and grain, &c., had been taken after he left Canada by officers of the army, or by persons engaged in some way in supplying the army, relying chiefly upon the pressure of the times, public wants, and the prejudice existing against the owner; but to what amount or value deponent could not ascertain. From the concurrent statements of those who appeared to be well acquainted with the subject, deponent believes said Kilbourn possessed from \$500 to \$1,000 in personal property at the time he left Canada. Deponent further says that he has been partially acquainted with Henry Jones, esq., postmaster at Brockville, for some twelve or thirteen years, and believes him to be a worthy man, entitled to full credit in his statements. Deponent further says that, in October last, deponent had a conversation with Hon. Lebbens P. Sherwood, one of the judges of the court of King's Bench in Upper Canada, now a resident of York, Upper Canada, but formerly of Brockville. In that conversation Judge Sherwood stated to deponent that he was well acquainted with said Kilbourn, and at the time he left Canada he believed his property was worth full \$4,000; but said judge declined giving any *written* statement to this effect, and only referred deponent to *others*, who, when called upon, declined in like manner as above stated. Deponent has made the foregoing statement at the request of Mr. Kilbourn, that he might have the benefit of such explanations as deponent was able to make.

GEO. FISHER.

Subscribed and sworn this 3d day of December, 1832, before me.

JOSEPH HUNT, *Commissioner of Deeds.*STATE OF NEW YORK, *City and County of New York:*

Joseph G. Swift, of the city of New York, being duly sworn, saith: That in the year of our Lord 1813 he was attached to the army of the United States, under the command of General Wilkinson, in capacity of chief engineer, and was then and there directed by said General Wilkinson to perform a secret expedition into the province of Upper Canada, for the purpose of ascertaining the strength of the different posts of the enemy, and to procure some suitable person, in whom confidence could be placed, to aid in said expedition; that David Kilbourn was employed by said deponent, in pursuance of said order of said general; that said Kilbourn did undertake said expedition, and performed the services required; that he did make returns of his said expedition to said deponent, and to the satisfaction of General Wilkinson; that, on the engagement between said deponent and said Kilbourn, deponent informed said Kilbourn that if he should receive any damage in the performance of said expedition, the United States would doubtless remunerate him for his losses. What damage said Kilbourn did sustain deponent does not know, but understood said Kilbourn lost property to some amount by confiscation, and was under the necessity of flying for refuge to the United States. And further the deponent saith not.

J. G. SWIFT.

In testimony of the foregoing declaration, signed and sworn to in my presence, I have hereunto set my hand and affixed my official seal, in the city of New York, this 18th day of January, in the year [L. s.] of our Lord 1827.

E. FISHER, *Public Notary.*STATE OF NEW YORK, *County of St. Lawrence, ss:*

I, Arnold Smith, of said county, do solemnly swear that during the late war of the United States against Great Britain I was requested by General Swift to employ a person in whom I could confide as a friend to the United States to perform an expedition through the Canadas. I did so by employing David Kilbourn, who executed his commission to the satisfaction of General Wilkinson, then commanding the United States army on the frontier, for whom it was intended that a promise was made that whoever would run the hazard should be protected, and indemnified should they sustain loss; that this promise was made by General Swift to me; that I delivered the commission to one William Wiley, as received from said Swift, who crossed the St. Lawrence for David Kilbourn; that he delivered the same to him; that a discovery of the expedition was made to the British government, and David Kilbourn taken, suffered a course of imprisonment, and effected his escape; that his property was confiscated in Canada, to the amount of which to me is unknown, and actually sold for the benefit of that government, and all this in consequence of performing that service; that your deponent is intimately acquainted with David Kilbourn and those circumstances.

ARNOLD SMITH.

Sworn and subscribed before me this 9th day of July, 1827.

SYLVESTER BUTRICK, *Justice of the Peace.*

"AN ACT to declare certain persons therein described aliens, and to vest their estates in his Majesty," passed March 14, 1814.

Whereas many persons, inhabitants of the United States of America, claiming to be subjects of his Majesty, and renewing their allegiance as such by oath, did solicit and receive grants of land from his Majesty, or became seized of lands by inheritance or otherwise within this province, which persons, since

the declaration of war by the said United States of America against his Majesty and his subjects of the United Kingdom of Great Britain and Ireland, have voluntarily withdrawn themselves from their said allegiance and the defence of said province: Be it enacted by the King's most excellent Majesty, by and with the advice and consent of the legislative council and assembly of the province of Upper Canada, constituted and assembled by virtue of and under the authority of an act passed in the Parliament of Great Britain, entitled "An act to repeal certain parts of an act passed in the fourteenth year of his Majesty's reign, entitled 'An act for making more effectual provision for the government of the province of Quebec, in North America, and to make further provision for the government of the said province,'" and by the authority of the same, that all such persons as aforesaid, who, having received grants of land, or may have become seized of lands within this province by inheritance or otherwise, as shall have voluntarily withdrawn themselves from this province into the United States of America since the 1st day of July, 1812, or who may hereafter, during the present war, voluntarily withdraw themselves from this province into the said United States, without license granted under the authority of the governor, lieutenant governor, or person administering the government of this province, shall be taken and considered to be aliens born, and incapable of holding lands within this province.

2. *And be it further enacted by the authority aforesaid,* That it shall and may be lawful for the governor, lieutenant governor, or person administering the government by commission, under the great seal of this province, to authorize any sheriff, coroner, or other person or persons in the several districts of this province, to inquire by the oath of twelve good and lawful men of their respective districts, and by inquisition indented under the hands and seals of the said jurors and of the said commissioner or commissioners, to return to his Majesty's court of King's Bench all such persons as aforesaid, who, seized of lands in the respective districts, shall have voluntarily withdrawn from the province into the United States of America since the said 1st day of July, and before the conclusion of the existing war with those States, without license granted under the authority of the governor, lieutenant governor, or person administering the government; and from and after the said finding by such inquisition, his Majesty shall become seized of the lands so found to have been in the seizin of such person on the said 1st day of July: *Provided always,* That nothing in this act contained shall be construed to prevent any persons interested in the said lands from traversing any inquisition or office respecting the same at any time within one year after the peace shall be established between his Majesty and the United States of America, or within one year after the finding of said inquisition.

3. *Provided always,* That nothing in this act shall extend or be construed to extend to affect the claim of any *bona fide* creditor, or to defeat any just lien or security of or upon any lands, tenements, or hereditaments whatsoever.

OSWEGO COUNTY, ss:—George Fisher, duly sworn, says that the foregoing is copied from a book entitled "The Statutes of the Province of Upper Canada," kept in the court-house in Kingston, Upper Canada, and which deponent was informed and believes is in truth what it purports to be.

GEORGE FISHER.

Subscribed and sworn this 3d day of December, 1832, before me.

JOSEPH HUNT, *Commissioner of Deeds.*

ON CLAIM OF CAPTAIN HUBERT LACROIX'S COMPANY, OF MICHIGAN, FOR PAY FOR SERVICES AS VOLUNTEERS IN THE WAR OF 1812-15.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 27, 1834.

Mr. E. WHITLESEY, from the Committee of Claims, to whom was referred the petition of Francis Lasselle, for himself and the residue of a company commanded by Hubert Lacroix, of the Territory of Michigan, during the last war, where they survive, and for their representatives where they are dead, reported:

That the petitioner, at the last Congress, presented his petition for himself and others praying to be allowed the pay and emoluments of volunteers, under the act of February 6, 1812, having, as was alleged, volunteered for a year, and having been included in the capitulation on the 16th of August, 1812, and not exchanged until after the year expired. This company has been paid for its services from May 18, 1812, to August 16, 1812, that being the time the company was under arms. It appeared by papers furnished the committee by Mr. Hagner, that four companies were in the service of the United States from the Territory of Michigan, and composed a battalion, commanded by Major Witherill. That, previous to the war, an order was issued by the Secretary of War to the acting governor of the Territory of Michigan, "to embody and call into actual service four companies of militia, properly officered, under the command of a major, to arm them from the public arsenal, for which this will be, for the proper officer, a sufficient authority." That four companies were organized, and entered the service under the command of Major Witherill, and that, after the capitulation referred to, these companies claimed to be paid for a year as volunteers, as appeared by copies of letters written by Major Witherill, and by the copies of letters written by Colonel Watson, who was secretary to the acting governor, and took an interest in behalf of the Michigan volunteers and militia. It was contended if these troops could not be considered as volunteers for a year, and be paid accordingly, that they still were entitled to pay as militia during the time they were in captivity, and that they were such prisoners from August 16, 1812, until the time they were exchanged, or the territory was retaken, which, in either case, was more than a year. It was said their situation was entirely different from the militia from the State of Ohio, which were surrendered

at the same time, inasmuch as the Ohio militia returned to their homes and pursued their wonted avocations, whereas the Michigan militia, or volunteers, were prisoners if they remained in the Territory, and could not pursue any profitable employment, or they were driven from their Territory and their homes, and, being prohibited from entering the service, they were without any settled occupation. It appeared that the question was submitted to the then Secretary of War, Mr. Armstrong, who decided these companies were militia, and not volunteers, and must be paid accordingly. He adverted to the order above referred to, and said the order from the War Office was for detached militia, and that volunteers were not required by it; that the draft was made in execution of this order, and that no person was authorized to receive volunteers under the act of February 6, 1812, at Detroit.

There was testimony to prove that this company did volunteer under the provisions of the act of February 6, 1812, but it was not sufficient to satisfy the committee that the said company volunteered under said act; and a report was drawn up and assented to by the committee, but afterwards withheld at the request of Mr. Wing, who had charge of the claim, to enable those concerned to supply the deficiency of proof, if within their power.

The same testimony is again before the committee, and in addition thereto is the deposition of Colonel John Anderson. He testifies that in April, 1812, he commanded the 2d regiment of Michigan militia, and received direction from the acting governor, which was accompanied by the then late act of Congress, to ascertain whether he could raise a company of volunteers from his regiment for a year; that he called out his regiment, stated to them the wishes of the government, and read to them said act by which they were invited to volunteer; that thereupon a great proportion of the regiment volunteered, and from these a company was selected by lot, which immediately proceeded to choose their officers, when Hubert Lacroix was chosen captain, Francis Lasselle, lieutenant, and Duncan Reed, ensign; that he made a return of his proceedings to the acting governor, and in a few days the commissions were received by the officers. He states that Major Witherill soon after inspected the company, and took it into the service, and that it so remained in the service until the capitulation at Detroit, on the 16th of August, 1812; and that a part of the company was in the engagement with the enemy, under the command of Major Van Horne.

The individual accounts of the officers have been furnished to the committee by Mr. Hagner. The caption in each is:

“*The United States*
To (name of the officer) late (rank) of a volunteer company of Michigan militia in the service of the United States.”

The service commenced, as stated in the accounts, on May 18, 1812, and ended on the 16th of August following. It should be noticed that these accounts were not made out until the year 1817, nor until after the department had decided they were only entitled to pay for the time they were in actual service. The accounts would necessarily be made out to conform to this decision. There was not a literal compliance of the act of February 6, 1812, in reporting the volunteers of Ohio to the Secretary of War, and formally accepting their services by the President; and in the first instance they were not allowed pay for a year. This is believed to have been the decision of the Secretary of War as to Captains Finlay's and McArthur's regiments; and that they were paid for the time they volunteered, by order of Mr. Madison, then President. Such decision was made as to the company commanded by Captain John Campbell. The Secretary of War ordered this company to be paid for six months, and would not recognize it as a part of the Ohio corps of volunteers, when it was afterwards proven, and known to one member of this committee, who drew most of the papers and orders relative to the subject, that this company volunteered for a year under the act of February 6, 1812. The officers of that company had made out their accounts for the period for which they were paid. It is, no doubt, the fact that in both cases the accounts were not made out until after the decision of the War Department was made, and then the accounts conformed to such decision as to the duration of the service. Congress has decided, in relation to the companies of Dequindre and Smith, that they were volunteers under the act of February 6, 1812, and they have been paid accordingly by a special act. The committee refer to a report relative to those companies. The testimony of Colonel Anderson has satisfied the committee, in connexion with other testimony and proofs, that the company commanded by Captain Lacroix did volunteer under the act of February 6, 1812, and are entitled to the same pay that others have received who volunteered under that act; and to enable them to obtain it the committee herewith report a bill.

23D CONGRESS.]

No. 562.

[1ST SESSION.]

ANNUAL RETURNS OF THE MILITIA OF THE UNITED STATES FOR 1833.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 6, 1834.

WAR DEPARTMENT, February 3, 1834.

SIR: In obedience to the requisitions of the first section of the act of Congress of March 2, 1803, entitled “An act in addition to an act entitled ‘An act more effectually to provide for the national defence by establishing a uniform militia throughout the United States,’” I have the honor to transmit herewith abstracts of the general returns of the militia of the United States, and of their arms, accoutrements, and ammunition, for the year 1833.

Very respectfully, your most obedient servant,

LEW. CASS.

Hon. A. STEVENSON, *Speaker of the House of Representatives.*

Abstract of the general annual returns of the militia of the United States, by States and Territories, according to the act of March, 1803, for the year 1833.

States and Territories.	Returns.		Infantry.										Cavalry.							Artillery.					
	For what year received.	Date.	Number of divisions.	Number of brigades.	Number of regiments.	Number of battalions.	Number of companies.	Commiss'ed officers, including general staff, &c. One company of cavalry, one of infantry, and five of light infantry; no returns received. Three companies of cavalry and one of artillery, amounting to one hundred and thirty-one, included in the aggregate.

The adjutant general says, "there are in the State 15 regiments and 91 companies of infantry, and 17 companies of light infantry. The whole number of militia enrolled is probably about 9,600."

The adjutant general reports the aggregate to be 185,456.

The adjutant general reports the aggregate greatly below the real strength of the militia of the State.

The governor reports no returns from several regiments, and says, "if a complete return could be had our militia would be at least 65,000."

The adjutant general reports the strength of but two brigades, which is not more than the eighth part of the strength of the State.

The governor reports the first regiment of infantry imperfect, the second only two companies returned, the fifth and ninth no returns received.

The adjutant general reports the militia to be about 4,000 effective men. The first and second brigades not heard from.

R. JONES, Adjutant General of the Army.

23D CONGRESS.]

No. 563.

[1ST SESSION.]

REMONSTRANCE OF OFFICERS OF THE ARMY AND MILITARY ACADEMY AGAINST TAXING
THEIR PAY FOR THE SUPPORT OF WIDOWS AND ORPHANS OF DECEASED OFFICERS.

COMMUNICATED TO THE SENATE FEBRUARY 6, 1834.

Memorial of sundry officers of the army and Military Academy remonstrating against the passage of the "bill to provide for the support of the widows and orphans of such officers of the army as may die while in the service of the United States."

To the honorable the Senate of the United States:

The undersigned, officers of the army and of the Military Academy, have read a bill reported to the honorable House of Representatives January 8, 1834, by the Committee on Military Affairs, entitled "A bill to provide for the support of the widows and orphans of such officers of the army as may die while in the service of the United States."

It is, perhaps, a matter of reasonable doubt whether the provisions of this bill are applicable to the officers of the academy who are not also officers of the army; but as the term "military establishment" used in the bill is somewhat indefinite, and might be so construed as to include the academic officers, they have deemed it proper to unite with the other officers of the post in stating the reasons why, in the opinion of the undersigned, the bill ought not to become a law.

The undersigned have heretofore been under the impression that the compensation allowed by law to the officers in the employ of government was considered but a fair equivalent for services actually rendered.

They have not believed it to have been the intention of Congress to create sinecure places or to grant gratuitous allowances; and if this be so, it would seem to follow that the faithful discharge of the duties assigned to a public officer entitles him, as a matter of right, to the compensation allowed by law.

It is true that that compensation may at any time be altered by Congress; but it is respectfully submitted whether Congress can rightfully change it, unless, in their opinion, it be disproportionate to the value of the services rendered.

If these views be correct, the right which an officer acquires in the compensation for his services is a clear right of property; his compensation, whatever it may be, is as much his own as though he had earned it in any other occupation in life.

The bill to which your attention is called proposes to raise a fund by a general tax on the officers of the military establishment, for the benefit of the widows and orphans of such officers as may die in service. Should this be done, it would go to establish the principle that Congress possess the right to appropriate the earnings of one class of individuals to the benefit of another; for while the tax would fall on all the officers of the army, the benefits would be shared only by a few.

Should Congress pass the proposed bill, and thereby compel a general contribution, might not the friends of the present measure press an extension of the benefits of the fund to the families of all married officers whose pay is too limited to meet their necessary expenses? And would there indeed be any difference in principle between the two cases? If the family of one officer is so connected with the other officers of the army as to justify a tax for its maintenance, there is no reason why the tax should not be laid when the maintenance is required, whether it be before or after the death of its head.

But it may be urged in favor of the proposed bill that it creates a noble charity for the widows and orphans of meritorious officers; that it will extend relief to the bereaved and destitute when all other means have failed; and that a plan so benevolent in its objects and promising so much good, should disarm opposition and receive a unanimous support.

The undersigned hope that they are not destitute of the fraternal feelings which should unite the members of the military profession, and that they would wish to consider in a spirit of generous friendship the claims which the widow and children of a brother officer might have on their kindness and liberality. But the present bill proposes to measure these sympathies by a legal enactment, and fix, in dollars and cents, the amount which shall be given. It thrusts aside the hand of generous benevolence and opens the private purse by the stern requirements of law. It sets at naught the claims of relationship and kindred, and compels the officer to turn the current of his charities in a particular direction, instead of permitting it to flow in its natural channel, where, perhaps, it might carry joy and gladness to the aged and destitute parent. Might not Congress, in carrying out the principles which this bill would go to establish, compel the officers of the army to support the Colonization Society, the Bible Society, or to contribute to any or all of the noble charities of the present day?

All attempts which have heretofore been made to control the private affairs of individuals by acts of legislation have proved entirely abortive. So great, indeed, has been the unwillingness to extend legislation to the private affairs of life, that the opulent son is not compelled by law to support the infirm and destitute parent.

Even should Congress see fit to organize the association, would it be more than is due to the rights of the officers of the army to leave it optional with each whether or not he shall become a member? This would extend the benefits of the association to all who are willing to contribute to its support, without taking from the means of those who may, perhaps, remain single for the sole purpose of extending pecuniary aid to those dependent on their exertions.

The undersigned, having given some attention to this subject, hope it will not be deemed out of place for them to submit the subjoined calculations, which would seem to show that the provisions which the bill would make could not afford a competent support to those for whom it proposes to provide.

Number of officers belonging to the military establishment, according to the present organization, 733.*

The proportion of these who are married is $\frac{1}{3}$.†

* This includes the professors and teachers at the Military Academy.

† It has been found that out of 630 officers, 295 are married or have families. Hence, 630 : 295 :: 733 : 343.

The yearly average of deaths, 18.*

The number of officers who will probably leave families, 876.†

Pay proper of officers belonging to the military establishment, \$325,994.‡

Pay proper of 235 cadets, \$45,120.§

Two and a half per centum per annum on the pay proper of officers and cadets, \$9,277.

Average pay proper of commissioned officers, \$444.

Two-thirds of which is \$296.

The average duration of human life between the ages of 21 and 50 (at which time nearly all the pensions would commence) is 22½ years; but as the pensions to males will cease when they arrive at 18 years of age, the table has not been carried beyond the 18th year.

A table showing the operation of the proposed fund, allowing an annuity of \$296 each to the widows and orphans of eight officers of the military establishment, predicated on an assessment of 2½ per cent. per annum on the pay proper of all officers and cadets.

Years.	Capital at the beginning of each year.	Interest at four per cent.	Amount of capital and interest.	No. of pensioners each year.	Average remuneration to each.	Average amount of pensions.	Balance on hand at the end of each year.	Annual contribution.
1	\$9,277	\$371	\$9,648	8	\$296 00	\$2,368	\$7,280	-----
2	16,557	662	17,219	16	296 00	4,736	12,483	\$9,277
3	21,760	870	22,630	24	296 00	7,104	15,526	9,277
4	24,803	992	25,795	32	296 00	9,472	16,323	9,277
5	25,600	1,024	26,624	40	296 00	11,840	14,784	9,277
6	24,061	962	25,023	48	296 00	14,208	10,815	9,277
7	20,092	803	20,895	56	996 00	16,576	4,319	9,277
8	13,596	543	14,139	64	220 92	14,129	-----	9,277
9	9,277	371	9,648	72	134 00	9,648	-----	9,277
10	9,277	371	9,648	80	120 60	9,648	-----	9,277
18	9,277	371	9,648	144	67 00	9,648	-----	9,277

From this table it appears that the fund commences to diminish in the fifth year; that in the eighth year it is no longer large enough to pay pensions of two-thirds the average pay proper; and that, accordingly, the pensions for that year will average but \$220 92 each. For the tenth year they will be \$120 60, and so on, diminishing until the 18th year, (when we suppose that the number of pensioners will be at least the maximum,) at which time the average pension will be \$67.

The accompanying report will show the inadequacy of a much larger assessment (viz: 10 per cent. on the pay proper of all the officers for four years, and 5 per cent. thereafter) to carry into effect the objects proposed in the bill.

And your memorialists will ever pray, &c.

* The committee appointed by the officers at Washington, in 1828, to report on the subject of a provident society, found, by an examination of the Army Register, that there was a yearly average of deaths among the commissioned officers of 13½. The number of officers in the army then was 542. Hence 542 : 13½ :: 733 : 18.

† Being 15-32 of 18.

‡ This does not include the extra pay enjoyed by officers of the line temporarily in the staff as aides-de-camp, adjutants, &c.

§ The monthly average of five years ending the 31st of December, 1833.

Proceedings of a meeting of officers held at the United States Military Academy, West Point, December 16, 1833.

Whereas the propositions for the formation of a provident society, which have recently been revived at several army posts, and the suggestion made by the Secretary of War in his last report, render it, in our belief, desirable that all interested should express their views on the subject; and as such an expression seems more particularly necessary since all who have yet spoken appear to consider that there can be but one opinion; we, the undersigned officers of the army stationed at the United States Military Academy, West Point, having at a former meeting referred the subject to a committee, do adopt the following report and resolutions:

REPORT.

The committee appointed to report on the subject of the formation of a provident society have taken into consideration the different plans which have, as far as their knowledge extends, been proposed for that purpose. These plans appear to be divisible into three kinds; of which some propositions embrace but one, others two, whilst others again embrace the whole. They are:

First. To secure an annuity for life, of a certain amount, to the widows and children of deceased officers.

Second. To secure a like annuity to officers who resign after a certain period of service.

Third. To secure the same to disbanded officers.

The committee will offer their views upon these in the order of the importance which seems to be attached to them respectively.

First. To secure an annuity to the widows or children of deceased officers.

Reference has been made here, on several points, to the excellent report of the committee appointed at a meeting of the officers in Washington in 1828,* which, from the official character and opportunities of information of those by whom it was made, offers the most satisfactory authority which can be expected. It will be assumed, in the words of that report, "that ten per cent. per annum for four years, and five per cent. thereafter, on pay proper, is the maximum rate of contribution; believing that the convenience, not to say the wants, of the officers will not permit a higher rate." Under the present organization of the army, the annual amount of the pay proper of all commissioned officers is about \$330,540, of which 10 per cent. is \$33,054, say \$33,000, which is the amount to be paid annually during the first four years, supposing that every officer subscribes; after which, the amount will be one-half of this, or \$16,500, with an addition of \$600 arising from this, namely, that every successive year there will be a class of graduates from the United States Military Academy who will pay ten per cent. instead of five per cent., as the rest of the officers of the army. The annual sum to be paid, therefore, after the first four years, amounts to \$17,100.

In order to ascertain the number of claimants for each year, the result of the calculation in the report of 1828 is taken as correct. This result is 7. As the difference of the pay proper in 1828 and 1833 is owing to an increase in the number of officers, it would appear that if the number of claimants, when the pay proper is \$243,752, is 7, the sum \$330,540 must produce a proportionably greater number. This is found to be 9; which, therefore, will be taken as one of the elements of the calculation.

The next point to be determined is the average amount of the annuities. The average pay proper, leaving out of consideration brevet pay, is \$428 per annum; so that if the annuity is to be equal to the half pay of the officers, the average amount will be \$214, say \$200.

The last condition is the average duration of the annuities. Taking the calculations in the report of 1828 on this point, a reference to their statement is all that is necessary. This contains, first, a table from the calculations of the Pennsylvania Life Insurance Company, which gives the following data:

Persons 21 years of age will probably continue to live	28 years.
Persons 25 years of age will probably continue to live	26 years.
Persons 30 years of age will probably continue to live	23½ years.
Persons 35 years of age will probably continue to live	21½ years.
Persons 40 years of age will probably continue to live	20 years.
Persons 45 years of age will probably continue to live	18½ years.
Persons 50 years of age will probably continue to live	17 years.

Average..... 22½ years.

The report goes on to say: "It is believed that the pensions of nearly all the widows will commence at periods of life between 21 and 50 years, which, according to the foregoing table, makes 22½ years the average continuance of life; but as it is probable the fund will be relieved by marriage, in which case the pension of the widow ceases, the committee have deducted 2½ years, and assumed 20 as the probable average duration of pensions of this class. It is true that, notwithstanding the marriage of the widow, the pension may be prolonged beyond the time assumed by the orphans who are under one year, or who may not be born until after the death of the father; but it is believed that these, as well as the 2½ years deducted, will be counterbalanced by the cases in which there are no children, or where the children have attained the age of 21 before the marriage of the widow.

Assuming, then, that all the officers of the army contribute during 4 years 10 per cent. of their pay proper, and 5 per cent. thereafter; that the surplus funds can be invested in stock yielding 4 per cent. interest, (†the greatest to be depended on, if security of investment and unavoidable delays be considered;) that the number of annuities granted to widows or orphans annually will be 9, and that they will be continued on an average of 20 years: the following table will exhibit the state of the fund for every successive year.

This table has been calculated on the presumption that the payments of the annuities are all made at the end of every year, and that the first year's subscription is allowed to accumulate its whole interest before any demand is made upon it.‡

* Military and Naval Magazine for November, 1833, p. 176.

† See report of 1828.

‡ This assumption, as well as all the others which this report contains, is taken as favorable as possible to the provident society.

A.

Statement of the operation of a proposed fund for the payment of an annuity of \$200 each to the widows or children of officers, nine in number; during their natural lives, predicated on an assessment of 10 per cent. per annum on the pay proper of all officers for the first four years, and five per cent. thereafter.

Years.	Capital at the beginning of each year.	Interest on capital.	Amount of principal and interest.	Amount of annuities for the year.	Balance end of year.	Yearly contribution.
1	\$33,000	\$1,320	\$34,320	\$1,800	\$32,520	\$33,000
2	65,520	2,620	68,140	3,600	64,540	33,000
3	97,540	3,901	101,441	5,400	96,041	33,000
4	129,041	5,161	134,202	7,200	127,002	17,100
5	144,102	5,764	149,866	9,000	140,866	17,100
6	157,966	6,318	164,284	10,800	153,484	17,100
7	170,584	6,823	177,407	12,600	164,807	17,100
8	181,907	7,276	189,183	14,400	174,783	17,100
9	191,883	7,675	199,558	16,200	183,358	17,100
10	200,458	8,018	208,476	18,000	190,476	17,100
11	207,576	8,303	215,879	19,800	196,079	17,100
12	213,179	8,527	221,706	21,600	200,106	17,100
13	217,206	8,688	225,894	23,400	202,494	17,100
14	219,594	8,783	228,377	25,200	203,177	17,100
15	220,277	8,811	229,088	27,000	202,088	17,100
16	219,188	8,767	227,955	28,800	199,155	17,100
17	216,255	8,650	224,905	30,600	194,305	17,100
18	211,405	8,456	219,861	32,400	187,461	17,100
19	204,561	8,182	212,743	34,200	178,543	17,100
20	195,643	7,825	203,468	36,000	167,468	17,100
21	184,568					

The result of this calculation shows that the fund increases for fourteen years with a diminished increment; that at the end of the fifteenth, the capital remaining, to which the contribution of \$17,100 is to be added, viz: \$202,088, is less than the corresponding capital of the year before by \$1,089; and now that as the contribution for each year added to the interest of the capital for that year is less than the demand for annuities, the fund must diminish until it becomes extinct. This, by continuing the table, it is found to do in the 32d year, when it will not only be exhausted, but in debt to the amount of about \$6,000.

Thus it appears that the maximum contribution of the officers of the army is unable to provide the mere pittance of \$200 per annum for widows and orphans alone.

Second. To secure an annuity for life of a certain amount to officers who shall resign after a certain period of service.

The annuity generally proposed is half pay, and the period of service 25 years; a greater term would not be useful to the officers, a less would burden too much the provident fund.

It may be safely assumed that after 25 years' service the individual will be a captain, and probably a field officer. Supposing, however, four captains to resign for every two field officers, the average half pay will be about \$300, which will be adopted in the following calculations.

In order to ascertain the probable duration of the annuity, it must be recollected that the average age at which cadets graduate at the Military Academy is 22 years. The average age at resignation will therefore be 47 years. Taking the table of lives already given, where 45 years give 18 $\frac{3}{4}$, and 50 years 17 years, as the probable continuance of life, the intermediate number 47 will give about 18 years, which will consequently be the probable duration of the annuity.

The investment is supposed to be made on the same terms, and the tables below to be constructed on the same principles as in the previous case.

This table shows the following results, viz: that the fund to the end of the 18th year has continued to increase; but that if the annuities be increased by the annual increment for the 19th year, it begins to diminish. Consequently, 5 annuitants, at \$300 per annum each, can just be supported, if the average duration of their lives be taken at 18 years; but should the average be increased to 19 years by any circumstance, or should any unforeseen deficiency occur in the annual contributions or mismanagement of the fund, the capital will commence to decrease, and must be exhausted at the end of a certain term of years.

B.

Statement of the operation of a proposed half-pay fund for five officers, to receive \$300 per annum each, on retiring after 25 years' service, predicated on an assessment of 10 per cent on the pay proper of all officers for the first four years, and 5 per cent. thereafter.

Years.	Capital at beginning of each year.	Interest on capital.	Amount of principal and interest.	Amount of annuities for each year.	Balance end of each year.	Yearly contribution.
1	\$33,000	\$1,320	\$34,320	\$1,500	\$32,820	\$33,000
2	65,820	2,632	68,452	3,000	65,452	33,000
3	98,452	3,938	102,390	4,500	97,890	33,000
4	130,890	5,235	136,125	6,000	130,125	17,100
5	147,225	5,889	153,114	7,500	145,614	17,100
6	162,714	6,508	169,222	9,000	160,222	17,100
7	177,322	7,092	184,414	10,500	173,914	17,100
8	191,014	7,640	198,654	12,000	186,654	17,100
9	203,754	8,150	211,904	13,500	198,404	17,100
10	215,504	8,620	224,124	15,000	209,124	17,100
11	226,224	9,048	235,272	16,500	218,772	17,100
12	235,872	9,434	245,306	18,000	227,306	17,100
13	244,406	9,776	254,182	19,500	234,682	17,100
14	251,782	10,071	261,853	21,000	240,853	17,100
15	257,953	10,318	268,271	22,500	245,771	17,100
16	262,871	10,514	273,385	24,000	249,385	17,000
17	266,485	10,659	277,144	25,500	251,644	17,000
18	268,744	10,749	279,493	27,000	252,493	17,000
19	269,593	10,783	280,376	28,500	251,876	17,000

If now we calculate the result, supposing six officers on half-pay, at \$300 each per annum, it will be seen that the first table, A, calculated for nine persons, at \$200 per annum, must correspond exactly with one for six persons, at \$300 per annum. The difference is, that the annuities in the first case are for twenty years, and in the second for eighteen years. For eighteen years, therefore, the tables will be the same.—(See table A.)

The conclusion, from inspection, will be as before, that the fund commences to diminish in the fifteenth year, and must, from the principle mentioned in that calculation, viz., that the demand for annuities is greater than the annual contribution, added to the interest of the surplus capital, *diminish*, and *finally become extinct*. This will take place in the thirty-seventh year, as will be seen by continuing the table, the difference between the terms of extinction in the two cases being referable to the difference of the eighteen and twenty years.

Five, then, can be *just* supported, and *six* cannot. Let us now compare the numbers with the probable number of those who would retire on half-pay.

From a simple inspection of the army register we shall find that there are at least thirty officers, a majority of whom are above the rank of major, who are now, (in 1833,) and at least fifty who, in the course of four years, (and it cannot be expected that the fund will go into operation before that time,) will be, entitled to retire on the terms proposed. Of these eighty, it is fair to conclude that at least one-eighth, or ten persons, would gladly avail themselves of the opportunity offered to enter on other pursuits, with the certainty of half-pay for the remainder of their lives. The conclusion is evident. If six exhaust the fund in thirty-seven years, when the majority of annuities is for captains, how soon will ten exhaust it when we continue for several years to support exclusively officers above that rank?

A writer in the Military and Naval Magazine, in an article of the number for July, 1833, entitled "Hints for a Military and Naval Provident Society," has put forth a scheme which is fair enough at the first glance to a superficial reader, but which leads to results which will perhaps startle the proposer of it. His plan briefly is to accumulate, first, by subscriptions in both services of one month's pay proper, and after that of one week's pay proper, (or the one-fourth of the preceding,) a fund which, at the end of five years, shall amount to \$175,000. We shall now quote from the article:

"The regular interest of this sum, together with the amount of annual subscriptions, would enable the society to pay *forever thereafter*, to the families of those entitled to the benefits of the institution, the following rates of annuities:

	Per annum.
"To the widows or children of general officers of the army, and post-captains of five years and upwards	\$1,000
"To the widows or children of post-captains under five years, colonels and lieutenant colonels	750
"To the widows or children of all other commissioned officers	500
"To the widows or children of all warrant officers	300

"Supposing the average yearly deaths to be one in fifty, as we have stated it, at the commencement of the sixth year there is to be paid of these annuities—

"Of the first class, three, at \$1,000	\$3,000
"Of the second class, five, at \$750	3,750
"Of the third class, seventeen, at \$500	8,500
"Of the fourth class, eighteen, at \$300	5,400
	<hr/> <hr/> 20,650

"Making an aggregate of \$20,650, and leaving a balance of interest and annual subscriptions of \$7,350 to be added to the next year's capital."

The great and fundamental error of the whole calculation is this: that the author of "Hints" has entirely forgotten that these annuities are *double* for the *second* year what they are for the first, treble for the third, and so on, according to the number of years from the beginning, *until the annuitants begin to die*. The table below will show him the true result of his plan. We shall allow him the benefit of six per cent. interest in the investment of the fund, as he has so taken it, although in our other calculations we have adopted only four per cent., in accordance *with the report previously referred to*.

C.

Statement exhibiting the operation of the annuity fund, as proposed by the author of "Hints for a Military and Naval Provident Society," July number, Military and Naval Magazine.

Years.	Capital at beginning of each year.	Amount of annuities for each year.	Balance after payment of annuity.	Interest on balance.	Yearly contribution.
First.....	\$175, 000	\$20, 650	\$174, 350	\$10, 461	\$17, 500
Second.....	202, 311	41, 300	161, 011	9, 660	17, 500
Third.....	188, 171	61, 950	126, 221	7, 573	17, 500
Fourth.....	151, 294	82, 600	68, 694	4, 121	17, 500
Fifth.....	90, 315	103, 250	12, 935	776	17, 500
Sixth.....	3, 789	123, 900	120, 111	7, 206	17, 500
Seventh.....	109, 817				

It appears from this, that in the eighth year from the first action on the subject, or the third from the first payment of annuities, the fund diminishes continually; that it is exhausted in the fifth year from the first payment, with a *deficit* of \$12,935; and that in only two years more the fund is in debt to the amount of \$109,817!

Third. To provide an annuity for disbanded officers.

The best reply to this proposition is found in an article of the November number of the Military and Naval Magazine for 1833, signed "Covington," whose remarks upon the whole subject appear to be very judicious.* His observation on the point before us, "that, as to this class, a sufficient objection is found in the fact that a single act of legislation might create more pensioners than it would leave contributors," which objections we consider, with him, to be fully sufficient.

Your committee have thus shown (as they conceive) that the three plans, first, to secure an annuity for life to the widows or children of deceased officers; second, to secure a like annuity of half-pay to officers who shall retire after twenty-five years of service; and, third, to secure an annuity to disbanded officers, are each *separately* and *individually* impracticable; and, consequently, that any idea of uniting all, or any two of them, in one project cannot be entertained for a moment.

Apparently, the only practicable way, and certainly the most advantageous one, of accomplishing the end proposed is, not by the action of the officers of the army as a body in the formation of a provident society, but by the application of each individual officer who feels interested in the subject to a life insurance company for an annuity, either for his relatives after his death or for himself if he choose to resign after a settled term of service. That it is the most advantageous way appears from these considerations:

1. The amount of *capital* possessed by a life insurance company, which in the case of the New York Company is one million; whereas the capital of the provident society must be comparatively small.

2. The mode of administering the affairs of the company, which would be carried on by men of business, acquainted with a subject occupying their *undivided* attention; whereas the direction of the provident society would be confided to gentlemen of the army, necessarily, to a certain degree, unacquainted with the best mode of conducting a moneyed institution, and already provided with professional occupations of their own.

3. The large interest which (as in the case of the New York Company) each director is required to hold in the capital stock; whereas the directors of the provident society will be interested to a small amount only, and the security for their attention therefore less.

4. The supervision of some legal authority, (which in the case of the New York Company is the chancellor of the State;) whereas the provident society would have no legal supervision of any kind.

Different plans have been proposed, according to which, if a certain majority of the officers of the army agree to the formation of a provident society, the contributions of the rest are to be enforced by law.

The committee would regard any plan which proceeds upon compulsion as essentially unjust; but they think it worthy of remark that such a measure will operate with peculiar hardship upon those who already have relatives, not wives or children, to whom they are obliged to devote any saving which they may contrive to make, and also upon those who have already devoted a part of their pay to an investment in an insurance company, several instances of both of which are known to exist.

In conclusion, we regret that we are compelled to dissent from so many of our brother officers on a measure of so much importance; but we conceive that their interest, as well as our own, will be much better promoted by laying before them what we believe to be the truth, than by entering hastily, and without due consideration, into a scheme which bears so much more the aspect of resulting in an *improvident* than a provident society.

* To the same writer we must express ourselves much indebted for the republication in that number of the *report* we have so frequently referred to.

RESOLUTIONS.

Resolved, 1st. That we consider the establishment of a half-pay system for the support of old officers who may wish to retire, and of the families of those who may die in service, by deduction from the pay of officers of the army, as impracticable, inasmuch as it would require an amount of contribution greater than we could recommend to others or agree to ourselves.

Resolved, 2d. That the proposition to form a fund by compulsory contributions, by which married officers alone are to be benefitted, is, in our opinion, equally repugnant to the feelings of married and single officers.

Resolved, 3d. That the plans (as far as we know) heretofore proposed for the relief of aged officers, and of the families of deceased officers, are as unnecessary as impracticable, since the same advantages may be obtained with equal, if not greater, facility by individual applications to insurance companies.

Resolved, 4th. That we should consider any proceeding having for its object a tax on the officers of the army for the above-mentioned purposes, without regard to the wishes of those who may be opposed to the scheme, as illiberal in spirit as it would be unjust in principle.

Resolved, 5th. That the editor of the Military and Naval Magazine be requested to publish these proceedings in the next number of his journal.

To the honorable the House of Representatives of the United States :

The subscribers, officers of the United States army, would respectfully submit their remonstrance against the passage of a "a bill," introduced into the House of Representatives the present session, "to provide for the support of the widows and orphans of such officers of the army as may die while in the service of the United States, by a deduction of 2½ per centum from the pay proper of the officers and cadets composing the military establishment," &c., &c.

The subscribers are opposed to this bill, upon the following considerations, viz:

That, while its object is undoubtedly to provide for such families as are left wholly unprovided for by the death of officers, a portion of the fund would be diverted to others entirely independent of it for support, thereby defeating the true object of the fund, as no discrimination in its application is established by the bill.

That, while it is compulsory upon those officers who are opposed to the bill to contribute to the fund, it must ever be repugnant to others that their families should benefit by it. The intended favor becomes an obligation when it ceases to be a free offering.

That, by contributing to such a fund, many officers would be deprived of means that are necessary to them for objects quite as urgent and incumbent upon them as the support of a wife and children, such, indeed, as induce them in many cases to remain unmarried.

That, by deducting from the pay of officers to apply the proceeds to even charitable objects, a principle is established of disposing of their property without allowing them a voice in its distribution. The amount and manner of a donation is determined by others than those who supply the means, and, as in all such cases, cannot fail to cause dissatisfaction both to the giver and receiver.

Finally, because the fund proposed to be raised will not be sufficient to answer its purposes, and nothing is guaranteed that a further tax may not be laid to enlarge it and its objects indefinitely. If the principle is acknowledged at all, there are no limits to its application.

R. S. BAKER,
Major United States Army.
 THOS. B. ADAMS,
Second Lieut. 2d Reg. Artillery.
 W. HOFFMAN,
Second Lieut. 6th Infantry.

To the honorable the Senate and House of Representatives of the United States:

The memorial of the undersigned, a committee on the part of the officers of the army at this post, respectfully shows: That the bill before Congress, "for incorporating a provident society for the army," is, in its provisions, unjust to your memorialists as individuals, adverse to their rights, and that the means proposed are inadequate to the object designed to be effected. It is unjust to them, because it proposes to make them a party to an act without their assent. It is adverse to their rights, because it proposes, without their consent, to deduct two and a half per centum from their pay, to be applied to an object of which they disapprove. The reasons for that disapproval it is unnecessary here to state. It is sufficient to remark that the deduction is proposed to be made from their pay, given by law as compensation for their services, and therefore as much within their control as any other property in whatever way acquired.

It is neither the wish nor the object of your memorialists to defeat a scheme, of which different views seem to be entertained by others; your memorialists only claim that, if such a society be instituted, it may be placed on the footing of a voluntary association; that they may not be compelled, contrary to their own views of their own interest, to contribute to its support. And here your memorialists might rest; but having it within their power, as they conceive, to demonstrate that the means proposed by the bill are inadequate to the accomplishment of the objects designed to be attained, they consider it their duty to submit that demonstration, in order to warn others against the danger of painful disappointments when it may be too late to apply a remedy.

We have found that it would require at least 10 per cent. on the pay proper of officers and cadets to maintain a yearly addition of eight annuitants at the rate of annuity proposed to be given.

And your memorialists, as in duty bound, &c., &c.

C. M. THRUSTON, *Capt. U. S. A.*
ROB. ARCHER, *Ass. Surgeon.*
E. LYON, *Capt. 3d Artillery.*

FORT MONROE, *February 15, 1834.*

A "circular" letter, dated "United States Military Academy, West Point, New York, January 20, 1834," having been enclosed to several officers of the army at Smithville, North Carolina, all the officers at the latter place assembled for the purpose of expressing their opinions of the said *circular*, and on the bill now before Congress, of which it treats.

The officers at Smithville unanimously concur with those at West Point in their statements and reasons, generally, contained in the *circular*, in opposition to the bill.

We know not by whose application the bill was introduced into Congress, neither have we been consulted on the subject, nor advised in any manner that such a measure was in contemplation, and we cannot but be astonished at the introduction and maturity thus far, with so little apparent inquiry into the wishes of the officers of the army respecting a subject so personal and important to them, and to *them alone!* And yet it is equally wonderful that Congress, in the exercise of acknowledged wisdom and justice, should entertain a bill so new in its principles and so unequal in its operations; we say *new* in its principles because it is, so far as we are informed, the first instance in this country of exacting a contribution from the emoluments of office. It is unusual, except in cases of urgent necessity, to impose *direct* taxation. And it is not common to exact a bonus *after* the privilege is conferred. We admit that Congress may increase or diminish our pay, but we respectfully contend they have no just and legal right to *tax* it.

We are satisfied that, with the full consent of every officer of the army, at the commencement, as to expediency and constitutionality, the plan would very soon produce discontent and disappointment by its failure in fulfilling the objects intended. But we do not believe the measure would have the sanction, as to adequacy of means or justness of principle, of more than a small minority of the officers; and, indeed, it is presumed that but few of them have been informed of the plan proposed.

And here we take occasion to express our *belief* that the funds of the "*Provident Society*"—a project by many so fondly cherished—would fail to afford the relief anticipated by its projectors and friends.

We trust that when the national debt no longer hangs a burden upon the treasury, and the country prosperous and overflowing with wealth, Congress will have the magnanimity, with the entire approbation of our fellow-citizens, whom we profess to have served with fidelity, to make provision for those officers who shall have devoted the active part of their lives to the services and dangers of the military profession, and also extend aid and comfort to such of their widows and families as may need their fostering care, or who shall merit reward for their prudence, moral excellence, and praiseworthy lives.

In expressing our disapprobation of the bill, in plain and decided language, though we apprehend there has been some precipitancy, we do not wish or mean to speak with disrespect of any officer or other person, for we have no doubt that those who have interested themselves in support of the measure have done so from pure and honorable motives.

SYL. CHURCHILL, *Brevet Major 1st Artillery.*
GEO. BLANEY, *Captain Corps of Engineers.*
THOS. J. C. MONROE, *Assistant Surgeon.*
GEO. WATSON, *2d Lieutenant 1st Artillery.*

SMITHVILLE, *North Carolina, February 22, 1834.*

To the honorable the Senate and House of Representatives in Congress assembled:

Your petitioners would most respectfully represent that they have been informed, by a circular from West Point, of the introduction of a bill into the House of Representatives for the passage of an act to create a *provident or pension fund* by a *tax* on the pay of all officers of the army. Believing, as we do, that the passage of such an act for such a purpose would be an infringement of our individual and *private* rights guaranteed to us in common with all the citizens of our country; and further, that it would *fail*, or worse than fail, in the very charitable end it purposes, we think we need no argument to prove, after the

very *able* investigation and exposé of the *Provident Society* scheme, recently made and published by our brother officers at West Point. We, the undersigned, do therefore beg leave most earnestly to remonstrate against the passage of any such act.

All of which is most respectfully submitted

J. GREEN, *Major 5th Infantry.*

No. 564.

[1ST SESSION.

ON THE EXPEDIENCY OF REMOVING THE TROOPS FROM FORT GIBSON TO THE WESTERN BOUNDARY LINE OF ARKANSAS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 10, 1834.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred the memorial of the legislature of Arkansas,* praying for the removal of the United States troops from Fort Gibson to some eligible point on the Arkansas frontier, near the western boundary line of that Territory, reported:

That before Arkansas was formed into a territorial government the protection of our citizens and the interest of the United States in that quarter induced the government to establish a military post at the junction of the Poteau and Arkansas rivers. This post was called "Fort Smith," and for several years after its establishment was on the extreme western boundary line of that Territory, and entirely west of the settlements of the citizens of the United States. By an act of Congress approved in 1825 the western boundary line of Arkansas was removed forty miles (in a straight line) further west, and after the passage of that act, and after the line had been run, it was deemed expedient by the government to remove the garrison from Fort Smith to the extreme western boundary line of that Territory. The troops were removed, Fort Smith was abandoned, and Fort Gibson was established; and all the intermediate country thus acquired or added to Arkansas by the act of Congress aforesaid was organized into counties by the legislature of Arkansas and settled by our citizens. Afterwards, in 1825, the government, in opposition to the firm and spirited remonstrance of the legislature of Arkansas and the strenuous efforts of her delegate, ceded the country added as aforesaid to Arkansas to the Cherokee Indians; and, by a clause in the treaty with that tribe, the western line of that Territory was brought back and permanently fixed where it originally was before the passage of the act of Congress of 1825. The garrison, however, has not been brought back with the line. The troops intended for the protection of the citizens of Arkansas are still stationed at Fort Gibson, in the midst of the Cherokee nation, forty miles, in a straight line, and about eighty by the military road, from the settlements of our citizens. The garrison, situated where it now is, can afford but little protection to the citizens of Arkansas. It is believed by the committee to be bad policy to have an armed force stationed so remote from the frontier and in the midst of an Indian country.

As the present western boundary line is fixed by treaty, and probably will never be extended further west; and as the policy of the government has been and will be to settle various tribes of Indians permanently upon that frontier; and as, on that account, there will ever be a necessity to keep up a garrison there for their protection, the committee have no hesitation in unanimously recommending the removal of the garrison from Fort Gibson to some eligible point on the Arkansas river, near the western boundary line of Arkansas. They believe such a disposition of our troops would more effectually protect our citizens, and, at the same time, bring the troops nearer to the point from which they draw their subsistence and support. The committee refer to the memorial of the legislature of Arkansas Territory, and make it a part of this report. They therefore report a bill.

[1ST SESSION.]

ON CLAIM OF AN OFFICER FOR EXTRA PAY WHILST COMMANDING TROOPS ENGAGED IN OPENING MILITARY ROADS IN FLORIDA AND ALABAMA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 27, 1834.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred the memorial of Lieutenant E. Philips, reported:

That it appears that the memorialist claims extra compensation, at \$1 25 *per diem*, for services performed as commanding a detachment of United States troops while engaged in opening and repairing certain roads in the Territory of Florida and State of Alabama. It was not the custom previous to June, 1828, to make extra allowances of pay to all the officers serving with troops employed in opening roads; but previous to that period, and subsequent to 1821, extra allowances have been granted, in several instances, to the officers who were *respectively charged with the superintendence, and were responsible for the execution* of such works. By copies of the orders it is shown that Lieutenant Philips was *not* in charge of the superintendence of the roads on which he was employed, but under that of officers of the Quartermaster's department, and the committee are unwilling to interfere in any cases of this kind; it must be left to the discretion and justice of the department to arrange and pay, as is now done for extra pay for extra services. It appears as if there was no law at the time granting extra pay for these extra services, if performed wholly by said petitioner; and although a practice has now obtained, it would open a field of troublesome and dangerous precedence to undertake now to allow extra pay for extra services, without law and without usage at the time of performing the extra service. *Resolved*, That the prayer of the petitioner ought not to be granted.

WAR DEPARTMENT, February 17, 1834.

SIR: I have the honor to transmit a report from the quartermaster general giving the information asked for in your endorsement upon the memorial of Lieutenant Philips for extra compensation.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. R. M. JOHNSON, *Chairman of Committee on Military Affairs, Senate.*

QUARTERMASTER GENERAL'S OFFICE, Washington City, February 15, 1834.

SIR: In relation to the claim of Lieutenant Philips for extra compensation for services performed in opening roads in Florida and Alabama, I have the honor to report that previous to June, 1828, it was not the custom of the War Department to make an extra allowance to all the officers serving with troops employed in opening roads; but the Secretaries, previous to that time, and subsequent to 1821, in several instances, made extra allowances to the officers who were *respectively charged with the superintendence and were responsible for the execution* of such works.

The orders (copies of which accompany the account of Lieutenant Philips) show that the roads on which he was employed were not under his superintendence, but under that of officers of the Quartermaster's department.

Lieutenant Philips presented a claim in November, 1830, for extra compensation. It was laid before the Secretary of War, who endorsed on the papers, "I cannot go back to admit claims for which at the time there was no law or regulation to authorize them."

There is now a regulation allowing eighty cents a day to all officers serving with working parties employed in erecting barracks or opening roads; and, considering the nature of the service, I think it a fair and equitable allowance. I return the papers in the case.

I am, sir, your obedient servant,

TH. S. JESUP, *Quartermaster General.*

Hon. LEWIS CASS, *Secretary of War, Washington City.*

No. 566.

[1ST SESSION.]

ON CLAIM OF A MAJOR OF THE LINE FOR ADDITIONAL PAY WHILE ACTING AS QUARTERMASTER GENERAL, AND FOR AN ALLOWANCE FOR A CLERK WHILE SETTLING HIS ACCOUNTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 27, 1834.

Mr. RICHARD M. JOHNSTON, from the Committee on Military Affairs, to whom was referred the claim of William Piatt, reported:

That it appears that the claim is for a difference of pay between the rank of a major in the line of the army and quartermaster general, amounting to \$583 86½, and for clerk hire from 1st May, 1815, to 14th December, of the same year, amounting to \$931 42. In the year 1813, the claimant was appointed

quartermaster general of the 7th military department, and stationed at New Orleans. That he was allowed a clerk at \$1,500 per annum, and paid him from the date of his appointment to the 14th December, 1815, the day on which the claimant's accounts were closed. In consequence of the amount of his disbursements as quartermaster general, and the complication of his accounts, connected with the military operations at New Orleans, during the attack on that city by the British forces, it was necessary to continue his clerk until the date above-mentioned. The claimant having served in the line as well as in his department, and being severely wounded, the active duties of the department devolved in a great measure upon the clerk, in addition to his ordinary business, thus rendering his presence necessary in order to assist in arranging his accounts, and give the necessary explanations in the course of their settlement; the accountant (Mr. Lear) admitted the account on the 1st May, 1815, but rejected the accompanying voucher, on the ground that the employment of a clerk after the 1st of May of that year was unnecessary.

The situation of quartermaster general is one of great responsibility and difficulty at all times, and peculiarly so during active operations in the presence of an enemy, even when every moment of his time is exclusively devoted to his appropriate duties. In this case a reference to the history of the period will show that he not only performed the duties of quartermaster general, and was responsible for his department in all its details, but that he performed distinguished services in the field, and was severely wounded. From the circumstances attending the case, and from the responsibilities attached to his department as quartermaster general, he could not safely have entered into the settlement of his accounts without the presence and aid of his clerk, who had acted as his assistant, and was acquainted with all the facts in relation to them; and as it could not be known, until the accounts were in the course of final settlement, what explanations might be called for, the same necessity existed for retaining the clerk until the accounts were closed. The money was *actually expended* by the claimant, as appears from the accompanying voucher. That it was *necessarily* expended, your committee do not doubt.

Your committee find that the Secretary of War, the quartermaster general, and the paymaster general, concur with them in opinion in this case.

The committee refer to the reports from the Secretary of War and quartermaster general, and make them a part of this report for publication. They therefore report a bill.

WAR DEPARTMENT, *February 6, 1834.*

SIR: I have the honor to transmit, for the consideration of the Committee on Military Affairs, certain documents respecting the claim of Colonel Piatt, for services in the army, and for expenditures in the quartermaster's department. The President, to whom the subject has been referred, is of opinion that so long a time has elapsed since the occurrence of the circumstances to which these documents relate, that it is inexpedient for the department to act upon them, and that they ought to be referred for the consideration of Congress. Under these circumstances, the matter is presented to the Committee on Military Affairs, with the statement, however, that the claim is well supported; and that were it not for the danger of entertaining such questions as a matter of ordinary occurrence after so long a delay has taken place, I should have no hesitation in allowing the demand, believing Colonel Piatt justly entitled to it.

Very respectfully, your most obedient servant,

LEW. CASS.

Hon. R. M. JOHNSON, *Chairman of the Committee on Military Affairs.*

To any one acquainted with military operations in time of war, it is hardly necessary to say that the situation of quartermaster general is one of great responsibility and difficulty at all times, and peculiarly so during active operations in the presence of an enemy, even when every moment of his time is devoted exclusively to his appropriate duties; but, in the case of Colonel Piatt, a reference to the history of the period will show that he not only performed the duties of quartermaster general, and was responsible for his department in all its details, but that he performed distinguished services in the field, and was severely wounded. From the circumstances attending his case, I have no hesitation, from my knowledge of the duties and responsibilities of the department, in expressing my decided opinion that he could not safely have entered upon the settlement of his accounts without the presence and assistance of the clerk who had acted as his assistant, and was acquainted with all the facts in relation to them; and as it could not be known, until the accounts were in the course of final settlement, what explanations might be called for, the same necessity, it seems to me, existed that the clerk should have been retained until they were closed.

The third section of the act of May 22, 1812, gives to the Secretary of War complete control of the case. The money was *actually* expended by Colonel Piatt, as appears by the accompanying voucher; that it was *necessarily* expended, I think, must be admitted, if the circumstances of the case be fairly considered. These two points established, the Secretary has the right, as I have no doubt he has the disposition, to grant the relief asked by Colonel Piatt.

Respectfully submitted.

TH. S. JESUP, *Quartermaster General.*

No. 567.

[1st Session.]

ON THE EXPEDIENCY OF COMMENCING THE WORKS AT SOLLERS'S FLATS AND HAWKINS'S POINT FOR THE DEFENCE OF PATAPSCO RIVER AND BALTIMORE CITY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 4, 1834.

Mr. R. M. JOHNSON, from the Committee on Military Affairs, to whom was referred a resolution of the 20th January, to inquire into the expediency of making appropriation for the commencement of the works of the first and second class, projected by the board of engineers for the defence of the river Patapsco and the city of Baltimore, reported:

To determine the question referred to it, the committee has not deemed it necessary to enter into a discussion of the general considerations which gave rise to the adoption of the system of fortification of which the works for the defence of the river Patapsco and the city of Baltimore constitute an important part, but has confined itself to an examination of the circumstances touching the expediency of commencing the construction of these works without further delay.

At the time of adopting a system of defensive works for the protection of the coast, it became necessary, owing to our inability to execute, at the same time, the whole system, to commence with those positions that must always possess a paramount influence upon the military and naval operations of the country, and would afford protection to our coasting trade, and preserve from violence the outlets of those great arteries of internal communication, to the wholesome and uninterrupted circulation of which we are so much indebted for the rapid and almost unparalleled development of our internal resources. This rendered it necessary to separate the many works composing the system into classes, these classes being determined by the efficiency of the works to meet the earliest possible emergency. At a single glance at the map of our indented and extensively developed coast, the eye is arrested by the Chesapeake, over almost every part of which, in its unprotected state, a hostile fleet might ride in safety, exacting contributions from those of the numerous inlets that have the ability to minister to its wants, destroying or crippling the sources along the borders from which its enemy might draw the means of resistance, and being thus in secure possession of a stronghold, would be enabled to intercept our coast trade, and destroy that between the eastern section of the Union and the West Indies altogether. When, with these considerations, we consider the vast connexion, by means artificial as well as natural, between the shores of the Chesapeake and almost every part of the country, it will readily be perceived why many of the works for the defence of the bay are arranged in the first and second classes.

The proximity of the city of Baltimore to the bay renders its situation, in a military point of view, dangerous. It is a great commercial depot, and would offer irresistible attractions to an enemy. In the present state of things he might, by a short march, and without the risk of separation from his fleet, from which he could have an easy landing, make himself master of the city, and even endanger it by a direct attack by water. To obviate this, two forts have been projected—one to occupy Sollers's Point flats, the other the point immediately opposite Hawkins's Point, about seven miles below the city. These works will force the enemy to land at a greater distance, thereby delaying his march, and gaining, in military operations, the all-important element, time for the arrival of militia. Two works of the first class have been commenced at Hampton Roads, viz: Forts Monroe and Calhoun, the former of which will soon be in readiness to receive its armament, and the latter will be completed at the earliest practicable day.

Although these works offer no impediment to an easy entrance to the Chesapeake, yet an enemy of ordinary intelligence would hardly incur the dangerous hazard of leaving them behind him in the possession of an adversary, with facilities to concentrate, within a short period of time, a naval force under its walls sufficient to prevent his subsequent egress, unless, to be sure, he had an object in view, the accomplishment of which was of more importance to him than the preservation of his fleet. This, with an enemy coming from abroad, and deriving his supplies from home, could hardly be the case with reference to a point so far in the interior as the city of Baltimore. This consideration takes much from the necessity of an immediate commencement of the works on the Patapsco, which, under other circumstances, would be imperative; and when it is recollected that there are many works of the first class, the early construction of which is of equal if not greater importance to the preservation of our great naval establishment and general commerce, the committee deem it inexpedient to commence, just at this time, the fortifications referred to in the resolution.

It also appears to your committee that the President of the United States, under whose authority new works are recommended to Congress, has declined to present these works at this particular period, on account of the appropriations which will be required by works now erecting and to be commenced. The committee are unwilling, without great necessity, to anticipate the wishes of the Executive on this subject, for fear of deranging the system. If the committee would do it in this case, they might undertake it in all cases; and Congress is not the most convenient tribunal to judge of the comparative importance of our various fortifications, and of the period of commencing the same. Notwithstanding these considerations, the committee recommend that the appropriation for the works aforesaid should be recommended at as early a period as the state of the Treasury and the other various works on hand will justify. The committee beg leave to be discharged from the further consideration of the subject.

WAR DEPARTMENT, *January 30, 1834.*

SIR: Agreeably to your request, I have the honor to transmit a report from the chief engineer upon the subject of the proposed works for the defence of the river Patapsco and the city of Baltimore.

This report will put the committee in possession of the views of the Engineer department, and of the board of engineers who projected the works referred to.

It is proper, however, to remark that there are considerations of a pecuniary nature connected with the commencement of these works, which the committee alone are competent to determine. The President, with whom I have conversed on the subject, is of opinion that without abandoning the original plan of

defence, there is, however, the less necessity for hurrying the construction of these works, in consequence of the near completion of the works at the mouth of the Chesapeake. The probability of any predatory incursion by detachments of a hostile fleet into the waters of that bay is certainly lessened by the formidable works at Point Comfort and the Rip Raps, and by the maritime force which, in time of war, will probably be stationed there.

Very respectfully, your most obedient servant,

LEW. CASS.

Hon. R. M. JOHNSON, *Chairman Committee on Military Affairs, House of Representatives.*

ENGINEER DEPARTMENT, *January 22, 1834.*

SIR: In obedience to your instructions, which accompanied your reference to this department of the resolution of the House of Representatives of the 20th instant, instructing the Military Committee "to inquire into the expediency of making appropriation for the commencement of the works of the first and second class, projected by the board of engineers for the defence of the river Patapsco and the city of Baltimore," I have the honor to state that the works projected by the board of engineers for the purpose mentioned are a fort to occupy Sollers's Point flats, in the Patapsco, and one to occupy Hawkins's Point, immediately opposite, the former being regarded as of the first, the latter of the second class. It may be proper to remark that the classification of these works has reference to the order as to time of their construction to meet the earliest possible emergency. The board of engineers say the proximity of Baltimore to the bay places that city in a dangerous situation. In the present state of things an enemy can, in a few hours' march, without being exposed to a separation from his fleet, after an easy landing, make himself master of that great commercial depot.

Baltimore requires for its security two forts in the Patapsco, one at Hawkins's Point, and the other at the extreme end of the flat of Sollers's Point. Besides the advantages which will result of obliging the enemy to land at a greater distance, thereby delaying his march, giving time for the arrival of militia, and preventing his turning the defensive position our forces might occupy, it will be impossible for him to endanger the city or its shipping by a direct attack by water. Concurring in the views expressed by the board of engineers, a commencement of the work projected for Sollers's Point was recommended in my annual report in the fall of 1831, as there was then a prospect that the services of an engineer could be rendered available for that purpose. During the last session of Congress an estimate for several new works, including the work for Sollers's flat, was submitted to the President, but the part for this was stricken from the list because it was deemed inexpedient to commence it just at that time.

I am, very respectfully, sir, your most obedient servant,

C. GRATIOT, *Chief Engineer.*

Hon. SECRETARY of War.

23d CONGRESS.]

No. 568.

[1st SESSION.]

ON THE PERMANENT ESTABLISHMENT OF THE OFFICE OF COMMISSARY GENERAL OF SUBSISTENCE OF THE ARMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 4, 1834.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom the subject was referred, reported:

That they refer to the letter of the commissary general and to the documents accompanying the same, and make them a part of this report; they also report the bill recommitment to them with an amendment; also recommend that the law which is continued and made permanent be printed with this report and the other documents before referred to.

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE, *Washington, February 21, 1834.*

SIR: I have the honor to report that the act establishing the office of the Commissary General of Subsistence was passed on the 14th of April, 1818, to continue for five years, and was continued under the act of 2d March, 1821, reducing the army.

In consonance with the act of 14th April, 1818, the office was renewed on the 23d of January, 1823, being three months previous to the expiration of the act by which it was established.

It was again renewed on the 2d of March, 1829, to continue for five years, viz: to the 2d of March of the present year, and to the end of the next session of Congress thereafter, and no longer; but in order that the commissary general may be authorized to issue his proposals in July, 1834, for supplies the subsequent year, it is deemed advisable to ask an early legislation on the reorganization of the office.

The establishment of the commissariat was in its incipency entirely experimental, and its utility has for the last fifteen years been fully tested, both in the saving of large sums annually to the government and in the improvement of the component parts of the rations issued to the troops, producing the most salutary effects in the health as well as in the morals of the army. The former will appear in full force upon reference to a report made to Congress on the 14th of November, 1822, of a comparative statement

of the three years antecedent and three years subsequent to the commencement of its operations, by which it will be perceived that the difference in subsisting the same number of men, including the pay of the commissary general, his assistants, clerks' salaries, and the contingent expenses of the office, resulted in an actual saving of \$785,520 79, say, seven hundred and eighty-five thousand five hundred and twenty dollars and seventy-nine cents, and it is confidently believed that the difference between the old and the present system has since that period been much greater. The latter, as regards the improvement of the ration and the general health of the troops, is fully proven by reports from the various commanding officers at the different posts, and their hearty approval of the addition to the ration of beans and rice, and in the substitution of coffee and sugar for whiskey, which has been productive of the happiest results in the health and morals of the soldiers.

The act of the 14th April, 1818, authorized the appointment of as many assistant commissaries from the line of the army as the service might require; and the act of 2d March, 1821, reducing the army, limited the number of assistants to fifty, and at no time have the regular appointments exceeded the legal limit.

By statement A (the Army Register*) it will be perceived that there are forty-four military posts and twelve arsenals; at twenty-seven of the most important posts the issues to the troops are made by twenty-seven assistant commissaries, being the whole number regularly appointed and commissioned; seventeen minor posts and five of the arsenals have acting assistant commissaries appointed temporarily, either by the commissary general or by the commanding officer of the post; at the remaining seven arsenals assistant commissaries are not necessary. Thirty of these assistant and acting assistant commissaries, in addition to their commissariat duties, perform duties *in the line*, and also act as assistant quartermasters, for the whole of which duties their maximum pay is \$20 per month, in addition to their pay in the line of the army.

By the act of 2d March, 1821, reducing and fixing the military peace establishment, assistant quartermasters were made liable to perform the duties of assistant commissaries, but their number being so limited, and their duties extending to various posts, it has not been practicable for the commissary general to take advantage of their services except at a few posts, and then only for the purpose of making purchases for distribution to assistant commissaries at other posts where provisions could not be procured in the quantities required for the service.

A duty devolves upon the commissary general to make an annual statement to the Secretary of War of all officers who disburse moneys on account of the commissariat in the first, second, and third quarters of the year, and any person referring to those statements as data for the number of assistant commissaries would be led into a manifest error, from a supposition that they all acted and were paid for the whole year, whereas such is not the fact. This number of disbursing officers the commissary general is compelled to report, even if the expenditure does not involve a greater amount than one dollar, and it arises from the frequent change of officers from post to post, by which the officer arriving relieves the officer departing; from officers appointed temporarily by commanding officers of posts to perform the duties of those on furlough; by officers accompanying small detachments on extra service, and by officers accompanying detachments of recruits from the different rendezvous to their regiments, all of whom have small sums placed in their hands for the expenditures incident to the occasion, and all of whom are held strictly accountable for the funds received and disbursed, many of whom are not in actual employment as acting assistant commissaries more than a week or a fortnight, and who receive pay as such only for the period employed; and all officers on furlough lose their additional pay, and the officer temporarily appointed to perform the duty receives it.

By reference to statement B, taken at random, it will be perceived that in the issues on the two most prominent and expensive articles, viz: pork and flour, the wastage is very trifling, viz: on the former (pork) not quite one-fourth of one per cent.; on the latter (flour) not one-sixth of one per cent.; and on the smaller articles three and two-tenths per cent. during eleven years; whereas, under the system prior to the establishment of the commissariat, it was customary for the government to allow to every contractor relieving another a wastage of twelve and a half per cent. on three months deposit, and one cent per ration for issuing the remainder of said deposit.

Statement C exhibits the expenditures of the commissariat from its establishment in 1818 to the 9th of November, 1833, as rendered on that day to the Secretary of War, amounting to \$5,600,709 15; and statement D shows the losses sustained by the disbursing agents of the department for the same period, amounting to \$15,497 92, being only a fraction more than one-fourth of one per cent.

The object of the Secretary of War in the bill now proposed is to make the office equally permanent with the other military bureaus, and not to ask an increase of clerks, but to place those already employed upon an equality with clerks of the same grade in the civil bureaus; the chief clerks in all of which receive \$1,700, the next class \$1,400, and the third class \$1,400, making an aggregate of \$4,500; the three clerks in the Paymaster General's office receive \$1,700, \$1,100, and \$1,100, aggregating \$3,900; the three first clerks in the Pension office receive \$1,600, \$1,400, and \$1,400, aggregating \$4,400; and the three first clerks in the Indian bureau receive \$1,600, \$1,400, and \$1,000, aggregating \$4,000; whereas the three clerks in the office of the Commissary General receive an aggregate of only \$2,950, being \$1,550 less than the three clerks in the same grade in the offices of all the Auditors, the two Comptrollers, the Register, and Treasurer; \$950 less than the three clerks in the Paymaster General's office; \$1,450 less than the three first clerks in the Pension office; and \$1,050 less than the three clerks in the Indian bureau.

The clerks in the Commissary General's office have been employed there for some years, so that the object is not to ask for additional force, but to place those now employed, as an act of strict justice, in point of salary, in such a position as to receive a compensation equal to clerks of the same grades in civil bureaus, agreeably to the classification made by Congress in 1818, to which they are, from their services, fully entitled, being equally arduous and as faithfully performed as those of any clerks employed under the government.

Very respectfully, your most obedient servant,

GEO. GIBSON, *Commissary General Subsistence.*

Colonel R. M. JOHNSON, *Chairman Military Committee House of Representatives.*

* It was not deemed necessary to print the Army Register here.

B.—Lieutenant A. W. Thornton acted as Assistant Commissary of Subsistence at Pensacola, from March 1, 1820, to March 31, 1831; during which period he received for issue the following provisions:

	Pork.	Flour.
Total quantity received.....	5,564 barrels.	11,336 barrels.
Total amount of wastage charged.....	15 "	18 "
Wastage of pork, one-fourth of one per cent. in 11 years; of flour, one-sixth of one per cent. in 11 years.		

The loss on the smaller articles averages three and two-tenths per cent. in eleven years' issues.

No. 569.

[1ST SESSION.]

ON CLAIM FOR PAY FOR EXTRA SERVICES BY AN OFFICER OF THE ARMY IN INSPECTING ARMS MADE BY CONTRACT, WHILE SUPERINTENDENT OF THE ARMORY AT SPRINGFIELD, MASSACHUSETTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 11, 1834.

Mr. THOMSON, from the Committee on Military Affairs, to whom was referred the petition of Colonel Roswell Lee, reported:

That the petitioner sets forth that in January, 1828, he being superintendent of the United States armory at Springfield, Massachusetts, was directed by Colonel Wadsworth to take the charge and responsibility of the inspection of arms made by contract for the United States, with an expectation that a reasonable compensation would be allowed for performing that extra service; that although the subject was frequently brought before the Department of War, it passed on without any decision; that at the close of the year 1830 different measures were taken for the performance of the above-mentioned duties, at the request of the petitioner; that since that time eighty cents per day has been, by a regulation of the War Department, allowed to the officer who performs that service.

The petitioner asserts that he performed the duties of inspector with fidelity for twelve years, making three thousand seven hundred and twenty working days, for which he asks fifty cents per day, making in all one thousand eight hundred and sixty dollars.

The petitioner states that the account having been presented to the present Secretary of War, he decided that the claim was of such long standing that he could not allow it, stating that the only relief was to apply to Congress, which the petitioner has done.

Your committee having bestowed all that attention to this case which in their judgment it required, beg leave to state, that they are of opinion the business of inspecting the arms made by contract was no part of the petitioner's duty as superintendent, and that it therefore must be an extra service, for which he ought to be allowed extra pay; and indeed, it is admitted at the department that it is an extra service, for which some extra allowance ought to be made; and it is also admitted that eighty cents per day is now allowed for performing the same duties, but the Secretary of War does not feel himself authorized to make any allowance at this late day without special direction from Congress.

It is in evidence before your committee, that the petitioner departed this life in the month of August last; that his estate is insolvent; that he has left a wife and a number of children to deplore the loss of a husband and father; that they are in a poor and destitute condition, and in pressing need of this little money for their subsistence.

Your committee are, therefore, of opinion, from the facts and circumstances of this case which have come to their knowledge, that the claim is a just one and ought to be allowed, and have thereupon reported a bill for the relief of the heirs of the late Colonel Roswell Lee.

No 570.

[1st Session.]

CONSIDERATIONS AND REASONS IN FAVOR OF ESTABLISHING AN ARMORY ON THE WESTERN WATERS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 18, 1834.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, in conformity with the resolution of the House of Representatives of the 18th of December, 1833, directing "that all the papers and documents now on the files of the House, in relation to the establishment of an armory on the western waters, be referred to the Committee on Military Affairs, and that they have leave to report by bill or otherwise," reported:

That the subject of a national armory upon the western waters was introduced into Congress about eighteen years ago, and has been presented frequently, perhaps, to each Congress since, for consideration, and although the greatest solicitude has been manifested by a large portion of the United States, particularly the whole West, and encouraged by the executive government in the reports made to Congress on the subject, yet nothing decisive has been done. The only measure ever taken upon this important subject was the authority given to the President to examine sites and make report to Congress, which was done, and there the measure has rested; and it seems a matter of difficulty to have the case decided and put to rest by a decision upon its merits. It is believed by the committee that, at all times, a majority of Congress for the last eighteen years have been in favor of the establishment. The great preventive cause to its adoption has arisen from our inability to reconcile contending interests as to its location.

There are many valuable sites from which a selection can be made, and this circumstance has increased the perplexity in making the selection from so many positions acknowledged to be good; the great number of valuable sites, therefore, rather than their scarcity, has mainly obstructed the progress, and, in fact, the consummation of the measure. Magnanimity, liberality, and patriotism, all combine to induce the members of this body to discard all local attachments and preferences for the purpose of securing for our country this important institution for our safety, upon the conviction that it would be as difficult to select an improper site as it would be to please all in the selection. The committee have, therefore, thought proper to make it the duty of the President to make further examination, and select the site, and commence the buildings.

The committee have attentively considered the subject of the resolution, and are of opinion that the great extent of seacoast and inland frontier necessary to be defended in time of war will render very large issues of small arms to the militia and other newly embodied troops indispensable; that from the past experience of the country, as well as from the limited term of service of such military bodies drawn from the militia, their unavoidable inexperience, and, in many cases, sudden and imperfect organization, it is reasonable to presume that a failure of our resources will be sooner felt in this respect than in regard to any other of our military supplies. And as such failure could not be remedied without serious inconvenience to the public service, nor until after much time had elapsed in building up and playing in full operation an establishment on a large scale for the manufacture of small arms, your committee are, in consequence, of opinion that the government should at all times be prepared with a supply of such munitions to an amount sufficient to meet the demands of the country in every emergency.

Your committee therefore deem it advisable to ascertain—

The number of small arms which should be annually manufactured, in order that, with those ^{they} already in the arsenals, the whole may be adequate to every exigency of the land service of the United States.

The number of small arms which ought to be in readiness for issue from the United States depots, for example, for the year 1832, in which the last returns of militia have been received, should be, from the best information that can be obtained, at least equal to seven times the actual loss or consumption during a period of one year of the last war with Great Britain. And as the average yearly expenditure or consumption of small arms during that war amounted to 90,545 stands, this would make the required number for 1832 equal to 633,815 stands. This number for 1832 should be annually increased thereafter in some given proportion to the annual increase of the militia; and it seems obvious that if its proportion to the number of militia for the year 1832 be right and proper, that proportion should be preserved in all subsequent years, so that, notwithstanding the annual increase, the same proportion of the whole body of militia may at all times be armed from the arsenals of the United States.

The number of militia in 1810 was 694,755, and is found to have increased since that period up to the year 1832, inclusive, to the amount of 1,316,615, being equal to an increase of 89.51 per cent. in 22 years, or to 4.7 per cent. per annum of the number of militia in 1810; and, on the supposition that the increase will not materially vary for the next 22 years, the average yearly increase from 1832 to 1854 should be 4.7 per cent. per annum of the number of militia in 1832, which would indicate an average yearly increase of the militia of 53,586 for the next 22 years following 1832.

Now that the same proportion of the whole body of the militia may be armed at any time before 1854, which proportion has been deemed sufficient for 1832, it will be necessary to reduce the average yearly increase of 53,586, in the proportion of the number of militia for 1832, to the number of arms deemed sufficient to arm them, or in the proportion of 1,316,615 to 633,815. This reduction will give 25,796 stands of small arms, as a necessary annual increase to the stock, 633,815, which should be in the arsenals in 1832, in order that the same given proportion of the militia may at all times be armed before 1854. So much for the annual manufacture on account of the annual increase of the militia.

The total of the non-commissioned officers, musicians, artificers, and privates of the army of the United States, and of the corps of marines, according to the existing organization, should be 7,537; and as small arms in the hands of regular troops are found, from uniform experience in English armies, to become unserviceable after a period of about twelve years' constant service, and as this fact seems to agree very well with the experience in our own armies, it will enable us to determine the annual consumption of the small arms in the hands of the army and of the corps of marines to be 628 stands.

The army was supplied with new arms in 1832; this number, 628, should therefore be annually

manufactured after the year 1832, to replace the annual consumption on account of the army and of the corps of marines.

It is to be remarked that no provision of small arms is recommended to be made with a view to meet the exigencies consequent upon any sudden enlargement of the regular army; such a provision having been deemed unnecessary, for the reason that, whatsoever the amount of the enlargement, it can only be made by a corresponding diminution of the militia of the Union, for which the supply of small arms recommended is considered sufficient.

The number of small arms which is above estimated to be a proper and expedient supply for 1832, viz: 633,815, exceeds the actual supply now in the arsenals of the United States by 54,239, which last number should properly, therefore, be immediately manufactured, it being a part of the estimated supply of 1832. As this may, however, be deemed objectionable, the deficiency may be supplied by an annual manufacture during the next 22 years of 2,465 stands.

Thus, from the best information within the reach of your committee, it appears that the number of small arms which are required to be manufactured annually, in order that a due supply may be always in readiness during the next 22 years, for issue to the militia in the service of the United States, or to the regular armies of the United States, should be—

	Stand.
For the average annual increase of the militia between 1832 and 1854.....	25,796
Estimated annual consumption of the army and of the corps of marines as at present organized.....	628
Annual supply, during the next 22 years, to make good the estimated deficiency of 1832.....	2,465

Total annual supply for troops liable to be called into the service of the United States for the next 22 years.....	28,889
---	--------

It next becomes necessary to determine the amount of the annual supply of small arms which is proper to be issued to the authorities of the individual States, supposing a proper and necessary extension of the present system of supply, as adopted under the law of 1808.

It has been before mentioned that small arms, in the hands of regular troops, will last in constant service with good care about twelve years, but as it is believed that, in almost all the States, and especially in the new States, the system of accountability for arms issued and of preservation for arms in store is very imperfect; and as they always sustain more injury from a bad system of preservation than from constant service in the hands of regular troops, it is considered, therefore, that ten years is a fair estimate of the durability for service of arms issued to the States. Doubtless, in some of the States where the system of preservation and accountability is good, they will last much longer; but it is equally certain that, in some of the others, they will be much sooner lost or destroyed.

From the annual appropriation of \$200,000 for supplying the militia with arms, through the authorities of the States, the sum of \$5,000 is annually deducted for the expenses of inspection, package, and transportation to the States, and the balance, \$195,000, is sufficient to arm complete 12,300 men as infantry. But as a variable proportion of field artillery and accoutrements are annually issued to the States, 12,300 stands of small arms are not, therefore, the regular annual issue; this last being greater or less, according to circumstances, than that number, which is considered a fair average of the annual issues of small arms to the States. On the supposition, therefore, that 12,300 stands are issued annually to the States, and that they last ten years, there must always be on hand, after the first ten annual issues, in the arsenals of the States, 110,700 stands. This is apparent, for the 12,300 arms issued to the States in the beginning of the first year are consumed at the beginning of the tenth year after issue, thus leaving nine years' supply in the arsenals at the beginning of the tenth year of issue; and as the subsequent annual supply and the subsequent annual consumption will be always equal, there will consequently be always a supply of nine years of issue, each of 12,300 stands. Hence, as the issues to the States under the law of 1808 have been regular since 1823, there are at this time, and should always be, in the hands of the States after January, 1833, nine times 12,300, or 110,700 stands.

Assuming 110,700 men as capable of being armed by the individual States in 1832, from the proceeds of the law of 1808, as a basis on which to found the issues to the States for the next 22 years following 1832, it would seem proper that the proportion of the supply of 1832, viz: 110,700 stands; to the militia of 1832, viz: 1,316,615 men should be preserved throughout the next 22 years, or that 1,316,615 should be to 110,700 as the average or mean number of the militia for the next 22 years is to the corresponding constant supply during that period. Now, the estimated increase of the militia on that of 1832, for the next 22 years, is 89 $\frac{3}{100}$ per cent., and the mean increase (44 $\frac{1}{100}$ per cent.) on that of 1832, would give the mean number of militia, equal to 1,905,800 men, which, being diminished in the proportion of 1,316,615 to 110,700, would give 160,238 stands for the constant supply for the next 22 years. And as the arms are estimated to last ten years, this number, 160,238 stands, on the principle before referred to, would be equal to a supply of nine annual issues, and would, therefore, in order to preserve it the same for the next 22 years, require an annual issue or manufacture of one-ninth its total amount, or 17,804 stands.

Thus, then, the annual manufacture required for all purposes of the land service of the United States and of individual States is as follows, viz:

	Stand.
For the average annual increase of the militia between 1832 and 1854.....	25,796
For the estimated annual consumption of the army and marine corps, as at present organized.....	628
For the annual supply during the next 22 years, to make good the estimated deficiency of 1832.....	2,465
For the annual manufacture of the next 22 years to preserve a constant supply of 160,238 stands in the arsenals of the individual States.....	17,804
	46,693

Your committee deem it desirable to determine next the excess of what they have deemed the necessary annual supply over and above the actual supply furnished by the national armories, as derived from existing appropriations. And to do this they would remark:

1st. That the number of small arms now manufactured annually at the national armories and by contract, is.....	38,000
2d. Annual deficiency in the number manufactured is.....	8,693

3d. Of this number (38,000) now annually manufactured, there are now made by contract 11,000
 4th. Estimated annual deficiency, together with the number of small arms now annually made
 by contract, is 19,693

It would appear proper, in the next place, for your committee to state whether this excess, over and above what is now furnished by the national armories is sufficient to justify the erection of another national armory; and what is the comparative cost of manufacturing small arms at the national and private armories.

On this subject it would appear that if all the small arms required annually for the public (land) service of the United States, and of individual States, were to be made at national armories, there would be required one additional national armory with powers of manufacture equivalent to an annual production of 19,693 stands of arms; and which would therefore require to be about one-fourth more extensive than the national armory at Springfield, Massachusetts, which is now capable of an annual production of 16,000 stands.

That the average cost of muskets made at the national and private armories, for the service of the United States, for the last ten years ending with 1832, is as in the statement following:

Years.	National armories.	Private armories.
1823.	\$12 23	\$14 00
1824.	12 23	12 25
1825.	12 23	12 25
1826.	12 23	12 25
1827.	12 23	12 25
1828.	12 23	12 25
1829.	12 23	12 25
1830.	11 12	12 25
1831.	11 26	12 25
1832.	11 64	12 25

The mean cost of a musket at the national armories for the above period (10 years) is therefore \$11 96; that of the private armories, \$12 42.

That the cost here alluded to is that which has accrued immediately after the musket is turned out from the last shop, finished complete, without including any charge for preservation, package, or transportation.

The necessity for one additional national armory upon a scale at least one-fourth more extensive than those now in operation, has been thus made obvious to your committee, and no less obvious that it should be located in the western States. In examining the map of the United States we see, on the one hand, the States of the east obstructed in their intercourse with those of the west by the great natural barrier of the Allegany mountains, presenting physical obstructions which interfere with and impede transportation, rendering it at best always expensive, and in some period of the winter almost impracticable. On the other hand, we see the States of the west bound together by every facility of transportation which can be afforded by numerous navigable rivers traversing their whole length, and all tending in the same direction to the valley of the Mississippi. Speaking generally, therefore, and with a view to the topographical features of the Union, we see incalculable expense and delay in transportation as the result of limiting our armories to the east alone, and cheapness and rapidity of transportation as the consequence of locating one in the west.

As to the number and probable increase of the militia of the east and of the west, comparatively considered, during a period of twenty-two years preceding and following 1832, your committee have to remark that the annexed table of the militia of the western States shows this number and increase preceding 1832; and that it is deemed proper to include the State of Alabama in the table, as being, in the opinion of your committee, more easily armed from a point in the west, by the Mississippi and Lake Pontchartrain, than from the position of the armories in the east, from which, towards the south, the line of transportation would be either 900 or 1,000 miles by land, traversing the navigable rivers which tend generally to the southeast, or coastwise, and subjected to the hazards of the Atlantic navigation and of the West India archipelago.

Statement of militia in the western States.

	In 1810.	In 1832.
Ohio	31,633	132,161
Indiana	4,000	53,913
Illinois		27,386
Missouri	2,000	5,326
Kentucky	42,581	65,852
Tennessee	27,122	72,991
Arkansas Territory		2,028
Mississippi	4,035	13,724
Louisiana	3,000	14,808
One-third of Pennsylvania	31,358	60,761
Alabama		22,446
	145,734	471,396
Total amount of militia of the United States in 1832		1,316,615
Difference		845,219

It is perceived that the militia of those States in 1832 was more than one-third of the whole militia of the Union in that year. And hence, also, at least one-third of the estimated annual manufacture of small arms, above referred to, viz: 46,693 stands should have been made in the west in 1832.

But it is also observable that the militia of those States have increased during the twenty-two years

preceding 1832, to the astonishing amount of 223 per cent. of the militia in 1810. And if this be regarded as a rule of increase of militia for those States for the twenty-two years following 1832, the average or mean increase for that period will be equal to 111½ per cent. of the militia of 1832, and the average number in those States above mentioned, for the next twenty-two years, will thus amount to 997,000 men.

The average number of the whole militia of the Union for the next twenty-two years being, as before estimated, 1,905,800 men, it thus appears that in 1843 the militia in the States above mentioned will exceed that of the remaining States in the ratio of 997,000 to 908,798, or be more than one-half of the whole militia of the Union. Hence there should then be annually manufactured in the west at least one-half of the estimated total annual manufacture above referred to, or 23,346 stands.

The militia of the western States thus appearing to have been more than one-third of the whole militia of the United States in 1832, and to be accumulating by so great a ratio of increase as to make them, in 1843, exceed those of the Atlantic States, there appears in the minds of your committee no doubt, as regards the number of militia in the west, that the proposed armory should be immediately commenced and pursued with vigor.

As regards the expense of transporting arms from the armories in the east for the armament of the militia of the west, it forms an additional and powerful reason for erecting this armory in the west without delay.

If the militia or population of the west were of uniform density, their centre of population would be the same as the topographical centre of those States, which is found to be on the Mississippi river, near the boundary between the States of Tennessee and Kentucky. A uniform population, therefore, and an armory established near that point of the Mississippi, would occasion the least possible expense of transportation in the distribution of arms to the militia of the west; for in that case the centre of least transportation would be the centre of population as well as the topographical centre of the States.

But as the militia or population is not uniform, these centres must be at different points of the western States, and the true centre of population will be found much further to the northeast than the topographical centre on the Mississippi, before referred to; it is, in fact, found to be on the Ohio, between Louisville and the mouth of the Scioto.

To the centre of least transportation of greatest population the cost of transporting the arms from the armories in the eastern States may be estimated. According to the best information, the present least cost of transportation of one musket is—

From the national armory, Harper's Ferry, to Cincinnati or Louisville.....	\$0 41
From the national armory, Springfield, to Cincinnati or Louisville.....	61
From private armories to Cincinnati or Louisville.....	54½

And supposing one-third of the estimated annual number, viz: 23,346 stands, necessary for the west during the next twenty-two years, to be transported from each of the above armories across the mountains to the mouth of those points, it would produce an annual expenditure for transportation equal to \$12,178.

The amount of transportation of small arms to the west during and since the war with Great Britain cannot be ascertained with any degree of exactness. It is found, however, that the cost of transportation to the west, supposed from the national armories to Cincinnati, of each musket during that period must have been about one dollar per stand, and that for some years after the war it was reduced to seventy-five cents per stand.

But to form some adequate idea of the expenses of transportation to the west, it may be proper to state that the number of small arms transported to the western States before mentioned, under the law of 1808, is about..... 77,000 stands.
And that the number now within those States, in the United States arsenals, at the military posts, or in the hands of the army, is about..... 97,000 “

Making a total transported across the mountains of..... 174,000 “

As all these arms were manufactured at the public or private armories before mentioned, and were principally transported when the transportation was at about seventy-five cents or one dollar per stand to Cincinnati, seventy cents per stand is hence considered a small estimate of their cost of transportation to the United States. The total of which, for a part only of the arms which have been forwarded to those States, must, therefore, have been at least \$121,800, being equal to more than one-third of the estimated cost of a large national armory in that country.

It may be necessary to state generally—

What will be the comparative cost of manufacturing small arms in the Atlantic and in the western States.

The cost of manufacturing arms in the west will certainly not be more than that of the arms now made at the national armories. It is, indeed, probably less; for the iron from the same works which supply the armory at Harper's Ferry can be delivered at any point on the Ohio for the same prices which are paid at Harper's Ferry; and iron of a quality equally good can also be obtained from Tennessee and other western States at points nearer Louisville and Cincinnati. Pit coal, charcoal, and gunstocks can be procured in the west on much better terms than at either of the present armories. Some of the smaller imported articles would probably cost more in the west than in the Atlantic States; but certainly this excess of cost must be so small as to be scarce worth consideration, since they can be imported as cheaply by the Mississippi as into New York, and since the transportation from New Orleans to Louisville cannot much exceed, if any, that from New York to Harper's Ferry.

The wages of workmen, which form about two-thirds of the cost of the arms, it may be stated, will be less in the west than on the seaboard, for it may be fairly presumed that labor will eventually be cheapest where subsistence is most abundant and cheapest.

In the absence of full and complete information on the subject of several proposed sites for the armory, your committee do not consider it expedient to propose any particular spot to the adoption of Congress; but, instead thereof, they deem it expedient to recommend that the duty of selecting the site be assigned to the President of the United States, with authority to proceed in such manner that the initiatory operations for erecting the armory may be commenced at as early a day as practicable.

What should be the extent of the armory, its probable cost, the time necessary to erect it, and the amount of appropriation required for the first year.

Nineteen thousand six hundred and ninety-three, or, in round numbers, twenty thousand stands of

muskets have been ascertained to be the necessary annual production of the proposed armory, for the reason, (as stated in this report,) that on the expiration of the existing contracts that number will require to be annually made to furnish the necessary public supply.

Twenty thousand should be the minimum number, since (as before stated) at least 23,346 stands of the annual supply for the west during the next 22 years should, in strict justice, be annually manufactured there, and because (on the supposition that the site is adopted during the ensuing spring) the armory cannot be in full operation before 1839, from which time, even though it produce 20,000 stands annually, there would yet be a deficiency in the public supplies of 60,851 stands.

It is estimated (on the basis furnished by the commissioners) that the proposed armory for the annual production of 20,000 arms will cost about \$525,000. This may be more or less than what may appear in the actual result; but from the authority of the facts on which this estimate is founded, it cannot deviate materially from that result. On the supposition that the whole of the ensuing spring will have expired before the operations on the site shall be commenced, it is estimated that \$65,000 will be required for the first year's appropriation, including the cost of examination of sites, and that in four years thereafter the armory may be completed. Your committee have, in consequence, considered it expedient to report a bill in conformity with these views, all of which are respectfully submitted.

Among other important duties of a wise and just government, none is more imposing and obligatory than the equal distribution of the expenditures in different and various parts of the community as far as it may be practicable. No portion of our confederacy has stronger claims upon Congress than the western country, which has, from necessity, been deprived of this benefit and blessing: a fair opportunity now presents itself, connected with an institution which is necessary for the safety and strength and defence of the country.

And finally, another advantage, though last not least. This national institution will tend to strengthen and consolidate our happy union, which is above all price, as it perpetuates liberty, freedom, and happiness to ourselves and to our posterity in all time to come.

ORDNANCE OFFICE, *Washington, December 23, 1833.*

SIR: The letter of Hon. R. M. Johnson, chairman of the Military Committee of the House of Representatives, referred by you on the 23d instant to this office for a report, has received attentive consideration; and, in answer thereto, I have the honor to transmit the following report:

Five times the consumption, in a year of war, has been assumed in Great Britain for the number of small arms deemed necessary at all times to meet the exigencies of their public service. But as the manufactories for small arms in Great Britain are of much greater extent than is necessary for the supply of their own troops, in consequence of the practice of furnishing many of the continental powers, they have thus the means of increasing their manufactures in a short time to any extent required by their public service; and as the armories of the United States cannot compete with English manufactories of small arms in foreign markets, it hence follows that our armories will never, so long as the price of labor is so different in the two countries, be more extensive than is necessary for the public service of the United States; for these reasons, seven times the expenditure in a year of war is considered a better measure of the public wants in this country than five times such expenditure.

The maximum number, therefore, of small arms which ought to be in readiness for issue from the United States depots, for example, for the year 1832, (that in which the last returns of militia have been received,) should be—

At least equal to seven times the actual loss or consumption during a period of one year of the last war with Great Britain; and as the average yearly expenditure or consumption of small arms during that war amounted to 90,545 stands, this would give the required maximum number for 1832 equal to 633,815 stands.

This maximum number for 1832 should be annually increased thereafter in some given proportion to the annual increase of the militia; and it seems obvious that if its proportion to the number of militia for the year 1832 be right and proper, that proportion should be preserved in all subsequent years; so that, notwithstanding the annual increase, the same proportion of the whole body of militia may at all times be armed from the arsenals of the United States.

The number of the militia in 1810 was 694,735, and is found to have increased since that period up to the year 1832, inclusive, to the amount of 1,316,615, being equal to an increase of 89 $\frac{5}{8}$ per cent. in 22 years, or to 4 $\frac{1}{8}$ per cent. per annum of the number of militia in 1810; and on the supposition that the increase will not materially vary for the next 22 years, the average yearly increase from 1832 to 1854 should be 4 $\frac{1}{8}$ per cent. per annum of the number of the militia in the year 1832, which would indicate an average yearly increase of the militia of 53,586 for the next twenty-two years following 1832.

Now, that the same proportion of the whole body of the militia may be armed at any time before 1854, which (as above remarked) has been deemed sufficient for 1832, it will be necessary to reduce the average yearly increase of 53,586 in the proportion of the number of militia for 1832 to the number of arms deemed sufficient to arm them, or in the proportion of 1,316,615 to 633,815.

This reduction will give 25,796 stands of small arms as a necessary annual increase to the stock (633,815) which should be in the arsenals in 1832 in order that the same given proportion of the militia may at all times be armed before 1854.

The total of the non-commissioned officers, musicians, artificers, and privates of the army of the United States and of the corps of marines, according to the existing organization, should be 7,537; and as small arms in the hands of regular troops are found, from uniform experience in English armies, to become unserviceable after a period of about twelve years' constant service, and as this fact seems to agree very well with the experience in our own armies, it will enable us to determine the annual consumption of the small arms in the hands of the army and of the corps of marines to be 628 stands.

The army was supplied with new arms in 1832; this number (628) should, therefore, be annually manufactured, after the year 1832, to replace the annual consumption on account of the army and of the corps of marines.

It is here to be remarked that no provision of small arms is recommended to be made with a view to meet the exigencies consequent upon any sudden enlargement of the regular army; such a provision

having been deemed unnecessary, for the reason that, whatsoever the amount of the enlargement, it can only be made by a corresponding diminution of the militia of the Union, for which the supply of small arms recommended is considered sufficient.

The number of small arms which is above estimated to be a proper and expedient supply for 1832, viz: 633,815, exceeds the actual supply now in the arsenals of the United States by 54,239; which last number should properly, therefore, be immediately manufactured, it being a part of the estimated supply of 1832. As this may, however, be deemed objectionable, the deficiency may be supplied by an annual manufacture, during the next 22 years, of 2,465 stands.

Thus, from the best information in the possession of this department, it appears that the number of small arms which are required to be manufactured annually, in order that a due supply may be always in readiness, during the next 22 years, for issue to the militia in the service of the United States, or to the regular armies of the United States, should be—

For the average annual increase of the militia between 1832 and 1854.....	25,796 stands.
For the estimated annual consumption of the army and of the corps of marines, as at present organized.....	628 “
For the annual supply, during the next 22 years, to make good the estimated deficiency of 1832.....	2,465 “
Total supply for troops liable to be called into the service of the United States for the next 22 years.....	28,889 “

It next becomes necessary to determine the amount of the annual supply of small arms which is proper to be issued to the authorities of the individual States, supposing an extension of the present system of supply as adopted under the law of 1808.

It has been before mentioned that small arms, in the hands of regular troops, will last, in constant service, with good care, about twelve years; but, as it is believed that in almost all the States, and especially in the new States, the system of accountability for arms issued and of preservation for arms in store is very imperfect, and as they always sustain more injury from a bad system of preservation than from constant service in the hands of regular troops, it is considered, therefore, that ten years is a fair estimate of the durability (for service) of arms issued to the States. Doubtless, in some of the old States, where the system of preservation and accountability is good, they will last much longer; but it is equally certain that, in many of the other States, they will be much sooner lost or destroyed.

From the annual appropriation of \$200,000 for supplying the militia with arms through the authorities of the States the sum of \$5,000 is annually deducted for the expenses of inspection, package, and transportation to the States, and the balance, \$195,000, is sufficient to arm complete 12,300 men as infantry. But, as a variable proportion of field artillery and accoutrements are annually issued to the States, 12,300 stands of small arms is not, therefore, the regular annual issue—this last being greater or less (according to circumstances) than that number, which is considered a fair average of the annual issues of small arms to the States. On the supposition, therefore, that 12,300 stands are issued annually to the States, and that they last ten years, there must always be on hand (after the first ten annual issues) in the arsenals of the States, and derived from the law of 1808, small arms to the amount of 110,700 stands. This is apparent, for the 12,300 arms issued to the States in the beginning of the first year are consumed at the beginning of the tenth year of issue, thus leaving nine years' supply in the arsenals at the beginning of the tenth year of issue; and, as the subsequent annual supply and the subsequent annual consumption will be always equal, there will consequently be always a supply of nine years of issue, each of 12,300 stands. Hence, as the issues to the States under the law of 1808 have been regular since 1823, there are at this time, and should always be, in the hands of the States, after January, 1833, nine times 12,300, or 110,700 stands.

Assuming 110,700 men as capable of being armed by the individual States in 1832 from the proceeds of the law of 1808, as a basis on which to found the issues to the States for the next 22 years following 1832, it would seem proper that the proportion of the supply of 1832 (viz: 110,700 stands) to the militia of 1832 (viz: 1,316,615 men) should be preserved throughout the next 22 years; or that 1,316,615 should be to 110,700 as the average or mean number of militia, for the next 22 years, is to the corresponding constant supply during that period. Now, the estimated increase of the militia on that of 1832, for the next 22 years, is 89 $\frac{3}{10}$ per cent., and the mean increase (44 $\frac{3}{10}$ per cent.) on that of 1832 would give the mean number of militia equal to 1,905,800 men, which, being diminished in the proportion of 1,316,615 to 110,700, would give 160,238 stands for the constant supply for the next 22 years; and, as the arms are estimated to last ten years, this number, (160,238 stands,) on the principle before referred to, would be equal to a supply of nine annual issues, and would, therefore, in order to preserve it the same for the next 22 years, require an annual issue or manufacture of one-ninth its total amount, or 17,804 stands.

Thus, then, the annual manufacture required for all purposes of the land service of the United States, and of individual States, is as follows, viz:

For the average annual increase of the militia between 1832 and 1854.....	25,796 stands.
For the estimated annual consumption of the army and of the corps of marines, as at present organized.....	628 “
For the annual supply, during the next 22 years, to make good the estimated deficiency of 1832.....	2,465 “
For the annual manufacture of the next 22 years, to preserve a constant supply of 160,238 stands in the arsenals of the individual States.....	17,804 “
Total annual manufacture for the next 22 years for all purposes.....	46,693 “
Total number of small arms now manufactured annually at the national armories and by contract.....	38,000 “
Annual deficiency in the number manufactured.....	8,693 “
Of this number (38,000) now annually manufactured, there are now made by contract..	11,000 “
Estimated annual deficiency, together with the number of small arms now annually made by contract.....	19,693 “

Thus it would appear that if all the small arms required annually for the public land service of the United States and of individual States were to be made at national armories, there would be required one additional national armory, with powers of manufacture equivalent to an annual production of 19,693 stands of arms, and which would therefore require to be one-fourth more extensive than the national armory at Springfield, Massachusetts, which is now capable of an annual production of 16,000 stands.

With regard to the location of such an armory, this should be evidently fixed at some convenient point (having, of course, the peculiar natural advantages) within the area of those States which are not already provided with a similar national establishment, with some view to the present number, probable increase, and points of greatest density of the militia in those States, and their facilities of transportation among themselves, contrasted with the difficulties in the way of communication with other sections of the country in which national armories are already established.

Now, by examining attentively the map of the United States, with reference to these principles, it is soon perceived that the militia of the following named States can be most conveniently and economically armed from some point within their area upon some one of their great rivers, or the tributaries thereof. The number of militia appertaining to the States named, in 1810 and 1832, is annexed thereto.

	In 1810.	In 1832.
Ohio	31, 638	132, 161
Indiana	4, 000	53, 913
Illinois	27, 386
Missouri	2, 000	5, 326
Kentucky	42, 581	65, 852
Tennessee	27, 122	72, 991
Arkansas Territory	2, 028
Mississippi	4, 035	13, 724
Louisiana	3, 000	14, 808
One-third of Pennsylvania	31, 358	60, 761
Alabama	22, 446
	145, 734	471, 396
Total amount of militia of the United States in 1832		1, 316, 615
Difference		845, 219

Hence it is perceived that the militia of those States in 1832 was more than one-third of the whole militia of the Union in that year. And hence, also, at least one-third of the estimated annual manufacture of small arms above referred to, viz: 46,693 stands, should have been made in the west in 1832.

But it is also observable that the militia of those States have increased during the twenty-two years preceding 1832 to the astonishing amount of 223 per cent. of the militia of 1810. And if this be regarded as a rule of increase of militia for those States for the twenty-two years following 1832, the average or mean increase for that period will be equal to $111\frac{1}{2}$ per cent. of the militia of 1832, and the average number in those States above mentioned, for the next twenty-two years, will thus amount to 997,000 men.

The average number of the whole militia of the Union for the next twenty-two years being, as before estimated, 1,905,800 men, it thus appears that, in 1843, the militia in the States above mentioned will exceed that of the remaining States in the ratio of 997,000 to 908,798, or be more than one-half of the whole militia of the Union. Hence there should then be annually manufactured in the west at least one-half of the estimated total annual manufacture above referred to, or 23,346 stands.

According to the best information the present cost of transportation of one musket from the national armory, Harper's Ferry, to Cincinnati is 36 cents; from the national armory, Springfield, to Cincinnati is 56 cents; from private armories to Cincinnati is 49 $\frac{1}{2}$ cents. And supposing one-third of the estimated annual number, viz: 23,346, necessary for the west during the next twenty-two years, to be transported from each of the above armories across the mountains to Cincinnati, it would produce an annual expenditure for transportation equal to \$11,011 53.

On the same supposition for the estimated annual number, 7,782 stands, necessary for the west in 1832, there would be an annual expenditure of transportation equal to \$3,670 51.

The amount of transportation of small arms to the west during and since the war with Great Britain cannot be ascertained with any degree of exactness. It is found, however, that the cost of transportation to the west, supposed from the national armories to Cincinnati, of each musket during that period must have been about one dollar per stand, and that for some years after the war it was reduced to seventy-five cents per stand.

But to form some more correct idea of the expenses of transportation to the west, it may be proper to remark that the number of small arms transported to the western States before mentioned, under the law of 1808, is about 77,000 stands. And that the number within those States in the United States arsenals, at the military posts, or in the hands of the army, is about 97,000 "

Making a total transported across the mountains of 174,000 "

As all these arms were manufactured at the public or private armories before mentioned, and were principally transported when the transportation, as before mentioned, was at about seventy-five cents or one dollar per stand to Cincinnati, seventy cents per stand is hence considered a small estimate of their cost of transportation to the United States, the total of which, for a part only of the arms which have been forwarded to those States, must therefore have been at least \$121,800, being equal to more than one-third of the estimated cost of a large national armory in that country.

The average cost of muskets made at the national and private armories for the service of the United States for the last ten years, ending with 1832, is as in the statement following:

Years.	National armories	Private armories.
1823.....	\$12 23.....	\$14 00
1824.....	12 23.....	12 25
1825.....	12 23.....	12 25
1826.....	12 23.....	12 25
1827.....	12 23.....	12 25
1828.....	12 23.....	12 25
1829.....	12 23.....	12 25
1830.....	11 12.....	12 25
1831.....	11 26.....	12 25
1832.....	11 64.....	12 25
Mean cost for the above ten years.....	<u>11 96</u>	<u>12 42</u>

The cost here alluded to is that which has accrued immediately after the musket is turned out from the last shop, finished complete, without including any charge for preservation, package, or transportation.

The above, it is believed, contains all the information in possession of this department on the subjects referred to by the honorable chairman of the Military Committee of the House of Representatives.

I have the honor to be, sir, your most obedient servant,

GEORGE BOMFORD, *Colonel of Ordnance.*

Hon. LEWIS CASS, *Secretary of War.*

23D CONGRESS.]

No. 571.

[1ST SESSION.]

ARMY REGISTER FOR THE YEAR 1834.

COMMUNICATED TO THE SENATE MARCH 20, 1834.

WAR DEPARTMENT, *March 19, 1834.*

SIR: I have the honor to transmit fifty copies of the Army Register for the year 1834 for the use of the members of the Senate of the United States.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. M. VAN BUREN, *Vice-President of the United States.*

Register of the army of the United States for the year 1834.

MILITARY ACADEMY, WEST POINT, NEW YORK.

INSPECTOR.

Brevet Brigadier General Charles Gratiot, chief engineer, (*ex officio*), inspector of the Military Academy.

ACADEMIC STAFF.

SUPERINTENDENT AND COMMANDANT.

Major R. E. De Russey, corps of engineers.

PROFESSOR OF MATHEMATICS.

Charles Davies, A. M.

ASSISTANT PROFESSORS.

Second Lieutenant Albert E. Church, third artillery.
 Second Lieutenant Richard H. Peyton, second artillery.
 Second Lieutenant Samuel C. Ridgeley, fourth artillery.
 Second Lieutenant Benjamin S. Ewell, fourth artillery.

CHAPLAIN AND PROFESSOR OF ETHICS.

Rev. Thomas Warner.

ASSISTANT PROFESSORS.

First Lieutenant Nicholas Tillinghast, seventh infantry.
 Second Lieutenant J. Allen Smith, third artillery.

PROFESSOR OF NATURAL PHILOSOPHY.

Edward H. Courtnay.

ASSISTANT PROFESSORS.

Second Lieutenant T. Jefferson Cram, fourth artillery.
 Second Lieutenant N. B. Buford, third artillery.

PROFESSOR OF ENGINEERING.

Dennis H. Mahan.

ASSISTANT PROFESSORS.

Brevet Second Lieutenant Frederick A. Smith, corps of eng.
 Brevet Second Lieutenant D. B. Harris, first artillery.

TEACHERS OF THE FRENCH LANGUAGE.

Claudius Berard.
 Julian Molinard.

ASSISTANTS.

Second Lieutenant Minor Knowlton, first artillery.
 Second Lieutenant Bradford R. Alden, fourth infantry.

TEACHER OF DRAWING.

Charles R. Leslie, R. A.

ASSISTANT.

Second Lieutenant Seth Eastman, first infantry.

INSTRUCTOR OF TACTICS, AND COMMANDANT CADETS.

Major John Fowle, third infantry.

ASSISTANT INSTRUCTORS.

First Lieutenant J. A. Philips, seventh infantry.
 Second Lieutenant James Barnes, 4th artillery.
 Brevet Second Lieutenant Ward B. Burnett, second artillery.
 Brevet Second Lieutenant E. Schriver, second artillery.

INSTRUCTOR OF ARTILLERY.

First Lieutenant Zebina J. D. Kinsley, third artillery.

ACTING PROFESSOR OF CHEMISTRY AND MINERALOGY.

Second Lieutenant W. Fenn Hopkins, fourth artillery, A. M.

ASSISTANT PROFESSORS.

Second Lieutenant William W. Mather, seventh infantry
 Second Lieutenant J. W. Bailey, first artillery.

SWORD MASTER.

Albert Jumel.

ADJUTANT.

First Lieutenant Charles F. Smith, second artillery.

QUARTERMASTER.

First Lieutenant Lucien B. Webster, first artillery.

PAYMASTER AND TREASURER.

First Lieutenant Thomas J. Leslie, corps of engineers.

MEDICAL STAFF.

SURGEON.

Walter V. Wheaton.

ASSISTANT SURGEON.

Thomas Henderson.

Officers of the army attached to the Military Academy and post of West Point.

The western department comprises all west of a line drawn from the southernmost point of East Florida to the northwest extremity of Lake Superior, taking in the whole of Tennessee and Kentucky; and the eastern department all east of such line, including Fort Winnebago.

The headquarters of the general-in-chief are in the District of Columbia.

The headquarters of the western department are at Memphis, Tennessee.

The headquarters of the eastern department are in the city of New York.

Those officers whose stations are changed by transfers and promotions will report for duty accordingly.

By order:

R. JONES, *Adjutant General.*

23D CONGRESS.]

No 572.

[1ST SESSION.]

ON CLAIM OF A SURGEON OF THE ARMY TO BE ALLOWED RENT OF PRIVATE QUARTERS,
THERE BEING NO ROOM FOR HIM IN FORT JOHNSTON, NORTH CAROLINA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 25, 1834.

Mr. THOMSON, from the Committee on Military Affairs, to whom was referred the petition of Caroline E. Clitherall, reported:

That the petitioner in this case sets forth that she is the widow of Doctor George C. Clitherall, deceased, late a surgeon in the army of the United States; that in the year 1814, in the month of May, he was ordered to Fort Johnston, in the State of North Carolina; that he remained there in service until the 9th day of November, 1829, the time of his decease.

That during all that time no suitable quarters were furnished him in the garrison, and that he was obliged to provide quarters for himself outside of the fort; that for the private dwelling which he occupied he had to pay a rent of one hundred and fifty dollars per annum from his own private funds.

The petitioner states that mistaken delicacy prevented the doctor from making this claim during his lifetime; that the destitute and helpless condition in which herself and children have been left, and now are, compels her to make it, and throw herself and children on the mercy and justice of the government, in the hope of obtaining that relief which they so much need and so much desire; and, lastly, that she has no means of supporting herself and children but by teaching a small school, which is very uncertain and fluctuating in its pecuniary results.

Your committee will state that there are sundry statements and certificates of officers of the army accompanying the petition, which go strongly to corroborate the foregoing statement of the petitioner, and which led the committee to the proper department to ascertain the reason why this claim has not been allowed and paid, and were informed that it was of such long standing that they did not feel themselves authorized to allow it, but had recommended the petitioner to Congress as the only source from which relief can come at this late day.

Your committee have therefore reported a bill; but they have not, in that bill, given all that is claimed by the petitioner, which is \$150 per annum for fifteen years and a half, but have only allowed the sum of \$120 per annum, which is the amount allowed by the proper department to officers of the same rank when private quarters have been rented for them by the government.

ENGINEER DEPARTMENT, *Washington, January 29, 1834.*

SIR: I have had the honor to receive your communication of the 22d instant in reference to the claim of Mrs. Clitherall for rent of quarters, due the estate of her late husband, while stationed at Fort Johnston, North Carolina.

The facts of the case are stated at length in the accompanying* papers, and to which I beg to refer, as furnishing all the information it is in my power to give you on the subject. From them you will perceive that the claim is fully substantiated, and ought, in equity, to be allowed.

I am, with respect, sir, your most obedient servant,

C. GRATIOT.

HON. WM. B. SHEPARD, *of the House of Representatives.*

GENEVA, *June 7, 1833.*

I certify that the quarters at the post of Fort Johnston, North Carolina, were constructed under my orders in the years 1810 and 1811; and that there were no appropriations, and consequently no construction of a hospital or surgeon's quarters, and that the post so continued for many years, as I believe, to the year 1825 or later; and I also certify that it is the usual practice at that, as at other posts, for the surgeon to be furnished with private quarters.

J. G. SWIFT, *Major of Engineers in the years 1810 and 1811.*

BELONA ARSENAL, *June 19, 1833.*

I certify that the late assistant surgeon, George C. Clitherall, did not occupy public quarters at Fort Johnston, North Carolina, from the 17th of October, 1827, to the 30th of April, 1828, during which period, with the exception of a few weeks of detached service, I was in the command of that station; and I further certify that during the time specified there were no public quarters at the post suitable for the occupancy of Dr. Clitherall and his family.

P. WHITING, *Captain 1st Artillery, Commanding.*

* Letters from Mrs. Clitherall, dated April 16 and August 11, 1833; private note from General Swift, 20th May, 1833; General Swift's certificate, 7th June, 1833.

Fort Johnston, North Carolina, February 2, 1830.

In November, 1828, I assumed command of Fort Johnston, in Smithville, North Carolina. I found two lieutenants, unmarried, and Dr. Clitherall, married, on duty at the post. I had assigned to me, as my quarters, the lower part or first floor of the centre or main building, consisting of three rooms, with fire-places, and a kitchen in one of the wings. These rooms, I was informed, had been occupied by the commanding officers, my predecessors, for many years before; and the rooms were so connected or arranged that it was necessary to pass through the principal room or parlor to and from all the others, or through a back door by the private building and yard. Consequently, only one officer could be accommodated by these rooms. The second floor contained two rooms with and one without fire-places, and, like the lower part, the passing to and from the small rooms is through the principal one, with an outside door. These rooms I found occupied by the two subalterns, who used the main or entrance room jointly. No other officer could be accommodated, except in *common* with these two or myself. In one wing the assistant commissary of subsistence and acting quartermaster occupied a room as an office, and in the other wing Dr. Clitherall, assistant surgeon, occupied one as a dispensary, or for medicines and stores. These are all the rooms at the post suitable for officers; and at no time from my arrival at the post till the decease of Dr. Clitherall, in November, 1829, would it have been possible to furnish him with public quarters in the garrison without depriving the company officers of theirs, or the commissary of his office. Neither did the centre building, in my opinion, offer more than *one* choice on a floor; and, accordingly, I considered Dr. Clitherall, who resided out of the garrison, entitled to rent of quarters, and I advised him to apply for it. And from what I have been told respecting the number of officers quartered at the post, he is equally entitled to rent for several previous years.

SYL. CHURCHILL, *Brevet Major, Commanding.*

Fort Johnston, North Carolina, May 2, 1833.

MADAM: Your letter of the 27th April, in which you request my opinion respecting a claim for rent of quarters occupied by your late husband, Doctor G. C. Clitherall, at this post, was received a few days since. In reply, I have to state that I was assigned to the command of the post in 1828. On my arrival here I found Dr. Clitherall residing, with permission of the commanding officer, in a private dwelling outside of the fort, and he continued therein till his death, in November, 1829. The quarters in the fort during this time were sufficient only for the company officers, and occupied exclusively by the lieutenants and myself. The building for officers' quarters is so constructed that all the rooms on the lower floor are required for the quarters of the commanding officers, for offices, dispensary, &c., and the second story will not accommodate more than one officer with a family or two single gentlemen; and as, I presume, there were generally a captain and several lieutenants in the garrison, the same reasons operated to exclude the surgeon from the public quarters before as after my arrival at the post. And it is my opinion that formerly, as now, the surgeon could not, except during the casual and temporary absence of the company officers, have been accommodated with suitable quarters in the fort, and that consequently Dr. Clitherall ought to have been furnished with quarters at public expense in the village, as has been the practice with the surgeons since 1829. No allowance was made to Dr. Clitherall for quarters after I came here, and I have been credibly informed that none had been made previously.

SYL. CHURCHILL, *Brevet Major, 1st Artillery.*

Mrs. E. C. CLITHERALL, *Newbern, North Carolina.*

23D CONGRESS.]

No. 573.

[1ST SESSION.]

PLANS AND ESTIMATES FOR THE RECONSTRUCTION OF FORT INDEPENDENCE, ON CASTLE ISLAND, BOSTON HARBOR, MASSACHUSETTS, AND THE CONSTRUCTION OF FORT SCHUYLER, THROG'S POINT, EAST RIVER, NEW YORK.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 25, 1834.

DEPARTMENT OF WAR, *March 24, 1834.*

SIR: In compliance with the resolution of the House of Representatives of the 19th instant, I have the honor to transmit herewith a report from the chief engineer, which furnishes the information required in reference to the "fortifications proposed to be built on Castle island, in the harbor of Boston, and on Throg's Point, East river, New York."

I am, with great respect, sir, your most obedient servant,

LEWIS CASS.

HON. ANDREW STEVENSON, *Speaker of the House of Representatives.*

ENGINEER DEPARTMENT, *Washington, March 24, 1834.*

SIR: In compliance with the resolution of the House of Representatives of the 19th instant, directing the Secretary of War to submit any information concerning the fortifications proposed to be built on Castle island, in the harbor of Boston, and on Throg's Point, New York, which may have been recently received at the department, I have the honor to lay before you, herewith, two reports, with estimates from

the board of engineers, received on the 17th instant. One of these reports relates to Fort Independence, on Castle island; the other, to Fort Schuyler, to be built on Throg's Point. The drawings which accompanied these reports, exhibiting much information of a confidential character, are not submitted; but should it be deemed important to the object of the resolution an officer will attend with them for the purpose of affording such explanation as may be required.

These reports and estimates contain all the recent information on the subject that can be with propriety furnished. Yet it may be proper to state that Fort Independence is an important part of the defensive system adopted by the board of engineers for the protection of Boston harbor. The work is old and in a dilapidated condition. To repair it properly would amount almost to a reconstruction, as all its masonry requires to be rebuilt; its parapets, ramps, and slopes re-formed; and its gateways, posterns, and traverses renewed. The island on which it is situated is much exposed to the easterly storms which prevail on that section of the coast, and is liable to great injury from the encroachments of the water upon it. It is covered on the southeast by a stone wall, and was formerly protected on the northeast by a wharfing of timber; the latter, however, having decayed, that part of the island is again exposed, and it is proposed to cover it by the construction of a permanent wall. An estimate of the repairs required upon the island was made by a board of officers in 1831; but owing to the impossibility of commanding the services of an officer of engineers to execute them until within the last year, this estimate was found to be insufficient, owing, principally, to the rise in the prices of the materials to be used. Another estimate was made within the last year, based upon what was supposed would be the average prices during the continuance of the work, and on the supposition, as in the former estimate, that the present plan of the work, in all its parts, would be retained. The first was \$36,173 06, and the latter \$56,094 80. It having been determined to convene the board of engineers last fall for the revision of several new works, it was deemed advisable to bring before it the condition of Fort Independence; and the report on that work, herewith submitted, is the result of their deliberations on the subject. It will be perceived that the board recommend certain additions and improvements to the work as originally designed. These additions, the position of the fort, in reference to the other points to be occupied for the defence of the harbor and city of Boston, renders necessary; especially as it must be occupied in time of war, not only for the purposes of general defence, but also as a general depot for stores and recruits, and for the establishment of military hospitals.

Fort Schuyler is a new work. It was projected several years since, as one of the most important of the works required for the defence of New York. The original project has just been revised by the board of engineers, and the estimate herewith submitted is for the revised project. It exceeds the former estimate, but the difference is owing rather to the increased prices of materials than to any expensive additions to the work itself.

Respectfully submitted,

C. GRATIOT.

HON. LEWIS CASS, *Secretary of War.*

NEWPORT, *March 13, 1834.*

SIR: In compliance with your instructions, the board of engineers have prepared the project herewith submitted for the repair and improvement of Fort Independence, on Castle island, in the harbor of Boston.

The large amount of appropriations which will be requisite to complete the work renders it incumbent on the board to state their views of the importance of the position and of the necessity of the changes indicated in the project.

The advantages of Castle island as the site of a work for the defence of Boston against an attack by water were discovered at a very early period of our history, it having been constantly occupied for that purpose since (about) 1630. It is, in fact, favorably situated in every respect for the defence of the main channel, and possesses the further advantage of commanding the "President's Roads." The necessity of an efficient marine battery on this position will neither be obviated nor in any degree diminished by the construction of the works projected for the defence of the outer harbor, while to the latter the fort on Castle island will serve as a second line of defence; it affords the only security against the smaller class of vessels which, as is known, may enter the harbor through Broad sound. The board are therefore of opinion that the work ought to be maintained and so improved as to be secure from a *coup de main*.

For the detail of this project the board respectfully refer to the drawings (plan, elevations, and sections) which accompany this report. The principal constructions which an accurate survey of the fort and a close examination of its present condition have shown to be necessary, in order to its being suitably adapted to its object, may be briefly stated, as follows:

1st. *Scarp wall.*—A new face of granite to replace the old face of bricks, now in a state of entire decay, giving to the new face a batter of $\frac{1}{4}$ instead of $\frac{1}{2}$, which is that of the original face. This scarp, which varies from 11' to 13' around the greater portion of the work, to be carried up 12' higher on an average, so that the new cordon and coping will be nowhere less than 22' 4", or greater than 30', and averaging 26' 6" in height.

2d. *Casemates*, bomb-proof, to be substituted for the present quarters and barracks, which, from decay, would otherwise require to be rebuilt. In these casemates embrasures are provided for fourteen additional pieces of heavy cannon, bearing in the most favorable directions for the defence of the main channel.

3d. Other bomb-proofs for magazines and storerooms. It is proper here to remark that the present magazine is in so ruinous a condition, owing to defects of construction and long neglect, as not to be susceptible of reparation.

4th. A casemate for carronades in each flank, without which the foot of the scarp along the whole extent of every curtain, together with a considerable triangular space in front, not being seen from the covering line, would be left undefended.

We have the honor to be, very respectfully, your obedient servants,

JOS. G. TOTEN, *Lieut. Col. Engineers, Bvt. Col.*
S. THAYER, *Major of Engineers, Bvt. Lt. Col.*

Brigadier General CHARLES GRATIOT, *Chief Engineer.*

Estimate of the materials and workmanship, and of the funds required for the repair and improvement of Fort Independence, in Boston harbor, Massachusetts.

MASONRY.

Respectfully submitted.

S. THAYER, Major Engineers, Lieut. Col.

Report of the board of engineers on the revised project for Throg's Point, New York.

NEWPORT, March 11, 1834.

SIR: On receiving the intimation of the engineer department that the project for Throg's Point was to be revised the board of engineers recalled to mind that the survey on which that project was founded was necessarily rather preliminary than complete; and that a further and in some respects a much more minute survey must be made before the exact position of the work could be fixed, or its elevation be so adjusted as to remove all uncertainty in relation to the equilibrium of excavation and embankment, and, indeed, before it could be ascertained that the development of the battery ports fulfilled all necessary conditions. It was well known that the channel was properly commanded by these batteries, but the extent of deep water to the west of the channel was unknown, and it was therefore possible that these batteries would be found to have too great or too little development. These remarks in relation to the first survey must not be interpreted as imputing any neglect or inaccuracy to the officer who was entrusted therewith; that officer executed, in the most prompt, full, and perfect manner, the instructions given him; and if there was any fault in not foreseeing all the hidden circumstances of an unknown locality, the fault was confined to the member of the board by whom the instructions for the survey were dictated.

The new survey which the board solicited, and for which they prepared instructions, has been ably executed under the direction of Captain McNeil, of the topographical engineers. The drawings thereof laid before the board, and now communicated to the department with this report, accord with the first survey in all things wherein the drawings are comparable, and supply all the additional information needed.

A great part of the labor of the new survey was applied to minute levelling over the whole surface of ground embraced by the site of the work and the land approaches; in other words, over all the land belonging to the United States. The exact form of the ground is thus obtained, while previously there was known only the altitudes of a few of the most prominent points.

The materials being thus provided, the board have been enabled to give to the relief of the work the best relations to the surrounding eminences, and, at the same time, to apply rigid calculation to the important subject of excavation and embankment. The change in the relief, which the board are thereby called upon to recommend, is, however, much less than might have been looked for. As to the body of the fort, it is, indeed, very slight; the floor of the casemates was at first 23 feet above low water, it is now fixed at 21½ feet; and the crest of this work, which was at first 60 feet, is now placed at 61½ feet above the same level. And while the results of this minute levelling, and the relations established with the higher grounds on both sides of the river, have induced the board to increase the relief of the crest of the cover-face 7 feet, and of the crest of the covertway 4 feet 6 inches, they have also warranted them in the entire suppression of the ditch, 15 feet deep, which enclosed the water fronts. It is believed that while these changes, called for by a more exact adaptation of the work to the ground, give greater efficiency, strength, and simplicity, they will also lessen the expense.

It will be seen, in turning to the "map of Throg's Point, with its environs, 1833," (herewith,) that a line drawn from the fort to the point of City island is almost exactly a tangent to the line of 18 feet water on the west side of the channel; no vessel of force can, therefore, pass westward of that line.

By examining, next, the first "survey of the position of Throg's and Wilkins Points," (herewith,) it will be perceived that the position of City island and the breadth of the channel are not given. With the first survey only before them, the board could not, therefore, act safely on any other supposition than that the deep water extended westward nearly as far as Pennyfield Point. A different supposition might have left a large undefended space, from which an enemy's squadron could bring the fort to terms. The safer supposition involved contraction and irregularity of figure, an imperfect adjustment of parts, and not a little complexity of details; but it was, notwithstanding, imperative on the board, under the circumstances, to give such a direction to the north front of the fort as to command all that space.

Several advantages result from knowing the true form and direction of the channel. The angles of the polygon may be made more obtuse, whereby the fire of adjacent fronts may be made to cross upon the capitals; this excludes all spaces imperfectly commanded, without requiring the maximum traverse of the guns.

This opening of the angles brings all the fire of the north front, which, from its commanding the approach of vessels, is made superior to the northeast and southeast fronts, to act for a longer time on vessels in the channel; it allows suitable proportions of fire to be directed on the channel abreast of the work, without involving irregularity of figure; and it opens the gorge, thereby giving more room therein for quarters, barracks, storerooms, magazines, &c., &c.; and, also, thereby giving this gorge more complete control of the cover-face, and enabling it more perfectly to serve the latter as a parador. These advantages, with several others relating to symmetry and greater simplicity of figure, are obtained, moreover, by an actual reduction of outline and of cost.

The suppression, before mentioned, of the ditch of the water fronts, and, consequently, of the casemated caponiers, expensive works, from the amount of excavation, of revetments, &c., calls for the substitution of the tower bastions, shown on the revised project (A) herewith. This arrangement, while it greatly lessens the cost, will, under the new disposition of the water fronts, be equally efficacious in protecting the work from escalade.

Referring to the plan of the original project, (herewith,) it will be seen that the form of the site was not then known with the degree of accuracy necessary to fix definitively the form and extent of the glacis; this has now been done with precision, and it has been found necessary, in order to command the approaches along the water's edge as well as those on the higher grounds, to make portions of the glacis with steep slopes. It has, moreover, been found impossible to flank the profile of the south steep branch of the glacis from any part of the work itself, without running into the extravagance of giving this profile a direction that would carry it into deep water; hence has resulted the contrivance of detached casemates for two carronades near the water's edge of the south front. Their positions, dimensions, and objects will be seen on consulting the plan of the revised project, (A.) What has now been said of the glacis is in no respect consequent upon the modification of trace before mentioned. The glacis of the original project would have required the same arrangement.

The board has now adverted to all the alterations which a more perfect knowledge of the locality has called upon them to recommend, at least so far as relates to modifications which touch fundamental principles of trace and relief; as to trace, these changes are confined to the body of the work; and as to

relief, though affecting the cover-face and covertway also, they are slight; such minor alterations as necessarily follow from an adjustment of details will appear in the more particular description below of the work with the accompanying drawings.

In applying themselves to this new study of the position of Throg's Point, the board have kept constantly in mind the importance of the objects to be protected; the immediate bearing of the position upon the northern avenues of approach to those objects; its indirect bearing upon the defence of those objects against attacks from the south; its remoteness, its nearly isolated situation, its easy accessibility to an enemy, and the exceedingly strong position (see "sketch of a military reconnoitring between Kingsbridge and Throg's Point," herewith,) which an enemy, designing to reduce this obstacle, would take while engaged in the operation. Keeping these interesting and weighty considerations in view, the board are fully satisfied that any change tending to a diminution of strength or efficiency would be wholly inadmissible.

The body of the work is now symmetrical. The north and south fronts are each 281 feet long; the northeast and southeast fronts each 205.33 feet, and the west front 437.62 feet long. At each of the northeast, east, and southeast angles, is a tower bastion with flanks 38 feet and faces about 21 feet long; the width in the clear of these bastions being 22 feet 4 inches. To the west front are given two very short flanks, sufficient, however, for one carronade in each of the casemated tiers. The water fronts present three tiers of guns, and the land (west) front one tier of carronades and loop-holes, commanding the bottom of the interior ditch; one tier of carronades and loop-holes scouring the terreplein of the cover-face, and a third tier of guns and musketry commanding the terreplein of the cover-face, and looking into the country.

The water fronts are appropriated exclusively to the armament; the other front contains quarters, barracks, storerooms, and magazines. The outline of this work, including the tower bastions, is 477 yards; of the first project, the outline, exclusive of the caponiers, was 490 yards.

As to the land front of the cover-face it retains the original trace; the water faces of the bastions, making each an angle of $60^{\circ} 52' 44''$ with the land faces, are 238.21 feet long; the eastern extremities of these faces are arranged as flanks to the adjacent water fronts, and are 43.93 feet long. The whole outline of the scarp of the cover-face is now 452 yards; upon the original project it was 483 yards. The rear of the cover-face, being the counterscarp of the interior ditch, has been so disposed as to be everywhere well flanked. All those parts of the cover-face which look upon the water have had their terrepleins arranged for sea-coast carriages, and afford to the defence of the channel the fire of 28 guns.

The exterior ditch has the original breadth.

The covertway is provided with the requisite traverses, and has received barbettes at the extremities of the branches, in order to an effectual command of the steep slopes and of the profiles of the gentle slopes of the glacis; the left barbette has been so arranged as to give also a fire upon the channel. The place of arms has been made spacious, and its left parapet prepared for a battery of nine sea-coast guns.

In giving form to the glacis due attention has been paid to that important principle which requires all masonry to be covered from the effective fire of land batteries; the drawings will show that no masonry is exposed to batteries less distant than 1,200 yards.

The magazines will contain about 1,600 barrels of powder. Ample room will be found under casemates for other stores. The casemates of the gorge or west front will afford good accommodations for 720 men and officers, while the other casemates will give abundant and convenient shelter for twice that number.

To man all the flanks will require.....	110 men.
Each bastion and its covertway 100, two bastions.....	200 "
In reserve in the cover-face.....	140 "
On terreplein of main work.....	50 "
Total.....	500 "

on duty every third day; making a total to sustain a siege of 1,500 effective men. This number will also allow five men to every gun and three men to every carronade, and leave a reserve of 280 men.

In case of a joint water and land attack:

To man the flanks.....	110 men.
In each bastion 50 men, two bastions.....	100 "
To man 201 guns, five men at each gun.....	1,005 "
In reserve.....	285 "
Total.....	1,500 "

When a siege is not apprehended, the garrison, in time of war, should be as follows:

To man the flanks.....	110 "
To man two-thirds of the whole number of guns, viz: 134 guns, with five men at each gun.....	670 "
Total.....	780 "

Or, to man the flanks.....	110 "
To man one-half of the whole number of guns, viz: 101 guns, with five men at each gun.....	505 "
In reserve.....	165 "
Total.....	780 "

Or, to man the flanks.....	110 "
To man all the guns, with three men at each gun, 201×3	603 "
In reserve.....	67 "
Total.....	780 "

In time of peace a garrison of one company will be sufficient.

Table showing the armament, garrison, and expense of the revised project.

ARMAMENT.	
Fort Schuyler.—Number of guns.....	201
Number of carronades.....	72
Number of mortars.....	10
GARRISON.	
To sustain a siege.....	1,500 men
In time of war.....	780 "
In time of peace.....	50 "
Expense.....	\$577,000

The shores of Throg's Point are exposed on all sides to the wash of waves and are washing away. This makes the provision of a strong sea-wall, extending all around the point, indispensable. Though equally indispensable to any project, this sea-wall was omitted in the original estimate. The prices ascertained by experience at Fort Adams have generally been assumed in the following estimate:

The board recommend that on the approach of war a field-work be thrown up in advance of the fort. The position is marked A on the "map of Throg's Point, with its environs, 1833," (herewith.)

The following drawings relating to the first project for Throg's Point, sent by the Engineer department to the board, are herewith returned, viz:

1. "Fort projected for Throg's Point, East river."
2. "Sketch of a military reconnoitring between Kingsbridge and Throg's Point, 1819."
3. "Survey of the positions of Throg's and Wilkins's Points and of the adjacent country."
4. "Details of caponiers, casemates of reversed fire, carronade embrasures, &c., Throg's Point."
5. "Details of embrasures, Throg's Point."
6. "Details of embrasures."

The following new drawings are also sent with this report, viz:

1. "Throg's Point, scale 200 yards to 12 inches, horizontal curves for every foot of altitude, measured from low-water mark, 1833;" in its proper place thereon is (A) "Revised project for a fort for Throg's Point, New York, 1834."

2. "Map of Throg's Point, with its environs, 1833," (B.)

3. "Sections and elevations of the revised project for Throg's Point, New York, 1834."

Two or three sheets of drawings of details of the revised project will also be forwarded as soon as finished.

As connected with the subject, the board return, in addition, the drawings of the Wilkins's Point project, viz:

1. "Fort projected for Wilkins's Point, opposite Throg's Point."
2. "Details of embrasures, Wilkins's Point."
3. "Details of embrasures, Wilkins's Point."

The above report and the following estimate are respectfully submitted.

JOSEPH G. TOTTEN, *Lieutenant Colonel Engineers and Brevet Colonel.*

S. THAYER, *Major Engineers and Brevet Lieutenant Colonel.*

J. L. SMITH, *Captain Engineers, Resident Engineer, and ex-officio member
of Board of Engineers.*

Brigadier General CHARLES GRATIOT,

Colonel Commandant United States Engineers, Washington.

NOTE.—The area of Fort Schuyler, within the crest of the glacis, is 8.08 acres. The area of Fort Adams to that of Fort Schuyler is almost as three to one.

23D CONGRESS]

No 574.

[1ST SESSION.]

APPLICATION FOR COMPENSATION OR REIMBURSEMENT FOR EQUIPPING AND ORGANIZING A COMPANY OF FRENCH VOLUNTEERS FOR THE DEFENCE OF NEW ORLEANS, IN 1814-15.

COMMUNICATED TO THE SENATE MARCH 29, 1834.

To Messrs. the President and members of the Senate and House of Representatives of the United States of America:

GENTLEMEN: Your petitioner, John Hudry, exposes to you respectfully that, in November, 1814, he organized sixty French veterans and brave Louisianees under the denomination of the Company of the Franks. But few among them could provide their uniform, accoutrement, arms, and ammunition, the executive power of Louisiana having refused us every part of those indispensable articles, although daily advices assured us that the enemy, who was then plundering and laying waste the cities on the Chesapeake bay, had in contemplation an immediate attack upon New Orleans.

I therefore contracted for the uniforms, the cartridge-boxes, and six thousand cartridges. As no arms could be procured in town I got from Baratavia eighty blades of swords, which I caused to be completely mounted in New Orleans, with their furnitures. I gathered with much difficulty, in New Orleans and neighborhood, old muskets, some without rods, bayonets, or locks, all of which I had refitted at any price, and I supported, cheerfully, my comrades from the beginning of November to the end of February.

We were ready in one month to receive our general, Jackson. He led us to that memorable affair of the 23d of December, when he routed five thousand British veterans with fourteen hundred men on the left bank of the Mississippi.

The general took afterwards his position, and in the evening of the 27th he ordered the 24-pounder to be brought to the right of his line, which arrived after eight o'clock, amidst rain, frost, and a perfect obscurity; cannon and materials were unloaded in the mud, but no gunner could be found to put it in battery. The aide-de-camp, A. Davezac, came to me late in the night. He told me that the general was certain to be attacked next morning. Then I roused seventeen of my companions, the most of them professed gunners, and before daylight the battery was ready.

Next morning, the 28th, eight thousand red-coats appeared before us. They opened a brisk fire from a strong battery which they had established during the same night, with a shower of rockets, but our 24-pounder destroyed their redoubt, and they retreated.

Our general ordered a 12-pounder to be placed at the left of his line, but all the gunners were with Commodore Patterson on board the ship Louisiana. Therefore I sent to the piece my lieutenant with nine able artillerymen. They established the battery, and on the morning of the 1st of January nine thousand British came again to storm our poor mud line, but the Franks levelled their second battery, and they withdrew.

On the 8th of January the enemy attacked everywhere; eleven hundred red-coats advanced along the woods in close columns, but the Franks discovered the general staff on horseback; they pointed a canister, and the whole bunch came to the ground.

That army remained without a general, and, after some sharp struggles without command, they retreated, leaving the field covered with dead and wounded.

Had not that extraordinary event happened New Orleans would have been a Moscow before noon.

Gentlemen, I declare that I did no more than my duty as a professed champion of man's rights and of liberty from my early youth.

Eighteen or nineteen years have elapsed since those events, but I have taken good care never to mention my services nor my sacrifices for the defence of the country. I was a patriot, but not a mercenary. However, at last, misfortune, bad health, and age have overtaken me. Therefore I present myself with confidence before the honorable senators of the United States of America to ask them relief.

I am, gentlemen, the devoted patriot, and your faithful servant,

JOHN HUDRY.

Account of John Hudry, presented to the Committee on Military Affairs of the honorable Senate of the United States.

60 uniforms, comprising guêtres, pantaloons, waistcoats, coats, and hats, with ornaments and trimmings, at \$40.....	\$2, 400
60 cartridge-boxes, with furnitures, at \$10.....	600
60 blades of swords, mounted in New Orleans, with furnitures, at \$15.....	900
60 muskets, bought anywhere they could be found, some without bayonet, rod, or lock, and refitted at any price, at \$20.....	1, 200
3 hats for the officers, with decorations.....	150
3 swords for the officers, with furnitures in silver.....	75
2 drums, (one in copper), uniforms, and pay of the drummers.....	150
My own uniform.....	60
6, 000 cartridges.....	230
For supporting my companions from the beginning of November to the end of February, about \$30 per day.....	3, 600
3 epaulettes and 3 dragonnes.....	100
One cart and one man to convey provisions and straw, &c.....	120
The rent of a house for our rendezvous.....	120
And a great many other expenses.....
	<hr/>
	9, 705

Gentlemen, this money was a large portion of the proceeds of my patrimony. I hope that your patriotism and love for your country will put me in possession of the same, to be able to renew a little business.

I am your devoted servant, and friend of this republic,

JOHN HUDRY.

WASHINGTON, April 1, 1834.

I know the petitioner, John Hudry, and have known him since 1812. I know that in the fall of 1814, when the country was threatened with invasion, he raised and equipped a volunteer company for its defence; that he applied to the governor of the State for the necessary arms and equipments; that he was refused, as there were none to give him; that he did clothe, arm, and equip them at his own expense; that, on the arrival of the commander-in-chief, they were received into the service of the United States, and did, during the campaign of 1814-15, render the most important and signal service in defence of the country.

The petitioner was then a man of fortune, but has since become poor and in ill health. I know that all articles of equipment were at that period extremely scarce and bore a most extravagant price.

JNO. R. GRYMES.

NEW ORLEANS, March 21, 1815.

I hereby certify that Captain John Hudry, born in Savoy, did, at the eve of invasion, raise in New Orleans a company of volunteers, called the *Compagnie Franche*, and has been with his company in all the engagements fought with the English near this place previous to their flight, and is entitled to the esteem of all the good citizens of the United States.

ANDREW JACKSON, *Major General commanding 7th Military District.*

NEW ORLEANS, October 3, 1821.

DEAR SIR: The Company of Franks, whom you have commanded since their first organization in a manner so highly honorable to you and so satisfactory to them, have seen with the deepest regret that you had determined to become a citizen of another State, and that, in consequence of this your determination, you could no longer retain among them a situation to which their free will and suffrages had called you. No other alternative was left to them but to accept of the resignation which you tendered, and your resignation was accepted; but a solemn obligation is imposed upon them by everything that is sacred between man and man. They owe it to you, they owe it to themselves, they owe it to the State of Louisiana, to offer you an unequivocal testimony of their respect; and it is with a view to pay this debt of gratitude that we, the undersigned, have been appointed a committee, with instructions to draft and forward to you a letter expressive of the sentiments of the corps.

This duty we now come prepared to discharge, and we are happy to have it in our power to declare that you possess, in the most eminent degree, the patriotism and virtues of the republican, the amiable qualities and accomplishments of the gentleman, and the firmness and courage of the soldier; that to you alone is the corps indebted for that subordination and discipline which distinguish it; and that you were the man who, at the hour of danger, when our independence and the integrity of our territory were threatened by an invading foe, pointed out to us the post of honor and led us to victory. Need we add that the recollection of your examples and lessons will always be cherished by the company, and will hereafter, we hope, contribute in a great measure to the preservation of that spirit of emulation and good order with which you first inspired them.

Accept, dear sir, in behalf of our comrades, and in our own individual names, of the assurances of an unbounded affection.

We have the honor to be, with the highest consideration, your obedient servants and devoted friends,

B. C. DUNCAN.
 CHERATON, *Sergeant Major.*
 BERTEL, *Captain.*
 J. HACKER.
 J. TOURNÉ.
 HALLEY, *Second Lieutenant.*
 MARTIN OHLER.
 BOMREMZE, *Sergeant.*
 ANT. BOUTIN.

JEAN HUDRY, Esq., *Late Captain of the Company of Franks.*

NOUVELLE ORLEANS, Mai 22, 1821.

MONSIEUR: J'ai l'honneur de vous accuser réception de votre lettre, par laquelle vous m'informez qu'ayant fixé votre résidence dans l'Etat du Mississippi, vous me priez de raconter votre démission de capitaine de la Compagnie des Franks.

C'est avec regret, monsieur, que j'accepte la résignation d'un citoyen aussi estimable que vous, je me rappelle avec un sentiment d'estime et de respect tous les services que vous avez rendus à notre pays

pendant la campagne de 1814 et 1815; je suis moralement persuadé, connaissant votre patriotisme et votre dévouement pour le bien public, que si l'Etat était encore menacé d'un danger éminent, l'on vous serait accourir à sa défense et vous joindre à vos anciens des frères d'armes.

Je suis, avec estime, votre ami,

J. B. PLANCHÉ, *Brigadier Général.*

JEAN HUDRY, *Capitaine de la Compagnie des Francs.*

STATE OF MISSISSIPPI, *Wilkinson County, January 22, 1833.*

To all who may see these presents :

I do certify that I have known Captain Jean Hudry for more than eleven years, and been intimately acquainted with him during the principal part of that period; that ever since my knowledge of him he has supported the character of an honest, upright, temperate, enterprising, benevolent, patriotic, and high-minded gentleman, and that I do believe him such in every respect; that he located himself on Percy's creek, in this county, about the year 1820, as a merchant, with a large stock of goods, but from the want of a knowledge of the people amongst whom he settled, and the laws of the country, and confiding too much in unworthy persons, he has been unjustly deprived of his property.

Given under my hand the day and year above written.

GERARD C. BRANDON.

Personally appeared before the committee on propositions and grievances of the house of representatives of the State of Louisiana, Jacob Tourné, of the city of New Orleans, who on oath says that, in the years 1814 and 1815, during the invasion of Louisiana by the British troops, and for two or three months previous thereto, he was a sergeant in the company of Franks, of which John Hudry was captain; that nearly all the members of that company were poor men who were unable to uniform, arm, and equip themselves; that they received neither arms nor accoutrements from the State; that it is within his personal knowledge Captain Hudry furnished clothing for most, if not all his men, and sent to Baratavia and procured eighty sabre blades, and had them mounted in this city for the use of his company; that he furnished caps and cartridge-boxes and about sixty muskets for his men; that, according to the prices at that time, the sabre blades were worth from six to eight dollars each, and that it was worth from four to six dollars to mount them; that the cartridge-boxes were worth four or five dollars each.

He further says that, for a month before the actual invasion, Captain Hudry's house was the headquarters of his company; that while at the lines Captain Hudry sent his cart almost daily and brought to camp for his men supplies of vegetables and provisions at his own expense; that he must have expended between ten and thirteen thousand dollars upon his company during the invasion; that he was a most vigilant and valuable officer; that he was then rich, but is now poor, old and infirm, about sixty years old.

J. TOURNÉ.

Sworn to and subscribed this 18th of February, 1833, before me.

CHAS. A. BULLARD, *Chairman.*

23d CONGRESS.]

No. 575.

[1ST SESSION.]

ON CLAIM FOR PAY AND EXPENSES INCURRED IN SECRET SERVICE FOR THE ARMY DURING THE WAR OF 1812-15.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 4, 1834.

Mr. E. WHITTLESEY, from the Committee on Claims, to whom was referred the petition of Gates Hoyt, reported:

That the petitioner states he was employed in the confidential service of the United States during the late war for about five months, and furnished himself with horses and expenses, and sometimes furnished others; that he travelled between two and three thousand miles, and for his services and expenses, after a period of twelve years' application to Congress, he obtained no more than three hundred dollars, by an act passed in July, 1832. He wishes the case reviewed, and an allowance made which shall compensate him in full for what is due to him as well for the interest on the money paid as for his services rendered. An act passed for the petitioner's relief on the 14th of July, 1832, appropriating three hundred dollars in full of all claims on the United States for secret services rendered by him during the late war. A report was made on this claim by the Committee on Military Affairs, on the 27th of December, 1831, to which this committee refer and make the same a part of this report. That committee were undetermined what ought to be allowed, if anything, and recommended that the subject should be referred to the Third Auditor, to receive testimony and report it to the House. This committee have not traced the further proceedings on this claim through all their stages, nor do they consider such examination to be necessary. Considering that a fund was at the disposal of the commanding general to defray the expenses of secret services, in the disbursement of which he took no vouchers nor made any report whereby

it can be ascertained whether these services were paid for or not, it is a question of doubtful policy whether relief ought to be granted in any application to Congress for like services unless the evidence is clear that the services have not been paid for. The strong presumption is that they were paid for at the time they were performed. This arises from the nature of the service, the kind of persons employed to perform it, and the fund set apart. The committee have not sent to the Third Auditor to obtain the papers, because they are not disposed to open the case, from its peculiar character and the great uncertainty that exists whether the petitioner was entitled to any special relief before. The following resolution is submitted:

Resolved, That the prayer of the petitioner ought not to be granted.

23d CONGRESS.]

No. 576.

[1st SESSION.]

APPLICATION OF OHIO THAT THE MILITARY ACADEMY AT WEST POINT BE ABOLISHED.

COMMUNICATED TO THE SENATE APRIL 7, 1834.

RESOLUTIONS relating to West Point.

Resolved by the general assembly of the State of Ohio, That the Military Academy heretofore established at West Point, in the State of New York, and supported exclusively by the funds of the general government, is partial in its operations and wholly inconsistent with the spirit and genius of our liberal institutions.

Resolved, therefore, That said military establishment ought to be abolished, and that our senators in Congress be instructed and our representatives requested to oppose any further appropriations for the support of the said academy; provided that no representative shall be considered as being requested to vote against the known wishes of his immediate constituents.

Resolved, That the governor of this State transmit to each of said senators and representatives an authenticated copy of the foregoing resolutions.

JOHN H. KEITH, *Speaker of the House of Representatives.*
DAVID T. DISNEY, *Speaker of the Senate.*

MARCH 3, 1834.

23d CONGRESS.]

No. 577.

[1st SESSION.]

APPLICATION OF FLORIDA FOR REBUILDING THE SEA-WALL IN FRONT OF ST. AUGUSTINE, AND FOR THE REPAIR OF FORT ST. MARK'S.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 7, 1834.

EXECUTIVE OFFICE, *January 13, 1834.*

SIR: I regret that in my message to the legislative council at the opening of the session a notice of the improvements at St. Augustine, so essential to the prosperity of that city and authorized by an act of Congress, was inadvertently omitted. They are of so much importance that I have thought it advisable to bring the subject specially before you to-day. An appropriation of \$20,000 was made by the general government for the purpose of rebuilding the sea-wall in front of the city of St. Augustine, and for repairing Fort St. Mark's, of the same place. These works are under the superintendence of Lieutenant Tuttle, of the engineer corps, an officer of reputation and talent, and preparations for their prosecution are in a state of great forwardness, but an additional appropriation is deemed indispensable for their completion, which I recommend to the legislature to urge upon the attention of Congress. St. Augustine is liable, in case of severe storms from the sea, to great injury and destruction. It has already swept over part of the buildings in that city, and its encroachments, in consequence of the dilapidated and insufficient state of the old sea-wall, have within a few years past been alarming. The increased value which will be imparted to the public lands in East Florida, and especially the public property in St. Augustine, by the contemplated improvement, offers considerations which will, no doubt, influence the national legislature to make further appropriations necessary to complete it. The city of St. Augustine is believed to be the first town established within the present limits of the United States after the discovery of America by Columbus. Its ancient and venerable walls, its Gothic architecture, its vine-mantled battlements and stone structures, present themselves to the eye of the traveller in beautiful contrast with the recently reared villages and cities in other sections of our Territory. The preservation of this city is highly important to other portions of the United States, as a desirable point for a public seminary; and from the salubrity of the atmosphere, and healthiness of situation, and the facilities of access to it from the north

and south, it must eventually be appreciated as it justly deserves. St. Augustine will be looked to by the invalid, and those who seek to escape from the destructive diseases of a northern winter, as an abode delightful for the beauty of its scenery and mild sweetness of its climate.

I am, respectfully, your obedient servant,

WILLIAM P. DUVAL.

The PRESIDENT of the Legislative Council.

Whereas the repair and preservation of Fort St. Mark's, valuable as that work must ever be to the defences of East Florida in the event of war, and interesting as a specimen of military fortification, in its style and architecture more perfect than any other in the United States, should, as it has been, be deemed of national importance; and whereas, also, the reconstruction and extension of the *sea-wall* in front of the city of St. Augustine, from Fort St. Mark's to St. Francis barracks, are indispensable to the safety and protection of the city from severe storms, to which it is sometimes exposed, and from the constant inroads of the sea;

And whereas the appropriation already made by Congress to effect these objects will prove, it is believed, insufficient for the purpose;

Therefore be it resolved by this legislative council, That our delegate in Congress be requested to use his best exertions to obtain additional and sufficient appropriations for the entire accomplishment of the above works.

Resolved, further, That the foregoing preamble and these resolutions, together with the special message of the governor of this Territory relating to the same subjects, be duly certified by the president and clerk of this house and forwarded to the said delegate.

JOHN WARREN, *President Legislative Council*

Passed January 22, 1834.

JOS. B. LANCASTER, *Clerk.*

EXECUTIVE OFFICE, *St. Augustine, February 5, 1834.*

GENTLEMEN: In conformity with a resolution passed by your honorable body on the 30th ultimo, the clerk of the council has this morning handed me a copy of the report of the committee appointed to inquire, &c.

I am compelled to believe that the committee greatly misapprehend the intention and design of construction of the sea-wall in their examination, and that they assumed, from report, as facts things which could only be known to myself, not yet having communicated the mode of construction to any person. I reply:

1st. A portion of the stone taken from the old foundations were, and are, equally sound and uninjured with those just received from the quarries, and some of them are of a better quality, in consequence of a general property possessed by this stone of improving by age.

2d. A portion of the stone specified in paragraph 1 is large and equally suitable (perhaps more so) with the stone taken immediately from the quarries, for the foundations.

No other than such selected stone has been used in the portion of foundations alluded to in the report of the committee, and so soon as they were exhausted, the foundations have been continued with the large stone from the quarries. The portion of the foundations (which were laid very compactly) of the selected portions of the old stone, has been bound with large firm stone, six feet in length, instead of four, which would have been the thickness of the second course if the foundations had consisted only of headers in that part of the wall; thus in fact making the wall much stronger than it would have been if differently constructed.

3d. The foundations are sunken as each stone is laid, and no trench can be opened, for the reason that if more space than may be sufficient to bed a single stone, or a single yard in length, be opened at a time, it immediately refills, thereby causing not only great inconvenience, but much extra expense. It is believed that the foundations are generally sunken to nearly or quite the level of low water, but at any rate they are much deeper than the foundations of the old wall, which has not undermined, as may be seen by inspection.

4th. In former times it was customary to give to all walls of forts, sea-walls, &c., a slope or batter on their exterior. This custom has long since been exploded by all modern writers and engineers, with the single exception of massive scarp walls of forts, in which case it is still retained at a maximum batter of one inch to each foot in height of the wall. In other cases it is deemed injurious. The sea-walls in Boston harbor, for the preservation of the islands, constructed under the direction of Colonel Totten, (one of the best practical engineers, perhaps, in this or any other country,) are constructed precisely upon the plan which I am adopting in the present instance; nor do his foundations sink deeper than I am having the present foundations placed. It must be obvious that the islands in Boston bay are much more exposed, both from the waves and from the ice, than the harbor of this place.

5th. An examination of any part of the wall laid will show the stone cut to a joint as close as is possible, and that there are infinitely less openings between them than can be found in any similar walls in any other portion of the United States, owing to the facility of working this particular species of stone.

6th. The Engineer department has banished the use of mortar generally from works of this description, as being not only injudicious, but a useless expenditure, if not injurious. For proof of this, see the sea-wall in Boston harbor, and one constructed by me on the Delaware.

7th. The committee labor under a misapprehension in their quotation, "that the wishes of the citizens were to be complied with" by orders from the Engineer department. The order was, that I would select such foundations as in my judgment might be most suitable. It was my desire, however, to comply with the wishes of the citizens in the location of the wall, and am much disappointed that such is not the fact. From my consultations with the late mayor upon the subject, I conceived that I had adopted precisely the views of most, if not all, of the inhabitants of St. Augustine. The plan was to run the wall in a straight

line from the commencement to the termination of that part of the old foundations, which it would be both injurious and unnecessarily expensive to remove entirely.

The line of location is not on the old foundations from its commencement to the uninjured part of the foundations, but it is in a straight line, and embraces a very considerable space between it and the old wall. The object is conceived to be the gaining of a street, or rather widening the present one. This object will be effected to that part of the wall where the old remains are yet standing, and from thence to the pillars it is sufficiently wide. The law does not contemplate tearing down that portion which is good; but in case of a future appropriation there will be no such restriction, and it will be advisable to extend the wall from the pillars in a line with the outermost wall, thereby adding eight or ten feet to the breadth of the street from thence southerly.

I cannot but regret that my plans should in any respect have differed from the views of any portion of the inhabitants of this city, but have the fullest confidence that a careful examination of the subject in all its bearings will restore to all the fullest confidence in the propriety and economy of the course commenced.

I shall be pleased at all times to discuss any part of the proceedings with any member or committee of your honorable body.

I have the honor to be, very respectfully, your most obedient servant,
S. TUTTLE, *Lieutenant United States Corps of Engineers.*

The MAYOR AND CITY COUNCIL of *St. Augustine.*

ST. AUGUSTINE, February 25, 1834.

SIR: Since our last letter to you, inclosing sundry documents in relation to the sea-wall, Lieutenant Tuttle has transmitted to the city council a communication in reply to the report of the committee appointed on that subject, a copy of which we take the liberty to forward to you.

We make no comment on this communication, but merely state that the committee are not inclined to alter the opinion contained in the report. We did not wish to interfere with Lieutenant Tuttle, but it was a duty which the public good did not permit us to overlook.

We also enclose to you a petition of the city council for permission to widen the street leading westward across St. Sebastian bridge, and have to request you to use your influence and exertion in its favor.

We have the honor to be, sir, your obedient servants,

ANTONIO ALVAREZ, *Mayor.*
GAB. W. PERPALL, }
ANDW. ANDERSON, } *Aldermen.*
JAMES M. GOULD, }

HON. JOSEPH M. WHITE, *Delegate in Congress, Washington City.*

Estimate of funds requisite for the continuation of the sea-wall for the protection of the city of St. Augustine, and for additional repairs of Fort Marion, accompanied by a plan of the city.

1. The distance from the termination of the present sea-wall to the wharf at St. Francis barracks is as follows, viz:

	Chains.	Links.
1. To Drysdale's corner	32	64
2. To offset	2	75
3. To barrack wharf	4	56
Total	39	95

Or, in round numbers, 40 chains, or 2,640 feet.

2. If the wall be supported in rear by a parapet of earth twenty feet in thickness the following may be deemed a sufficiently accurate profile of the average masonry and earth required to be constructed:

Having no levelling instrument the levels above are only averaged by approximation from the tides.

3. The cost of the masonry will comprise five different items, viz:

1. Quarrying.
2. Hauling to the landing.
3. Transporting to the work.
4. Dressing.
5. Laying.

Quarrying—Of the description of stone proposed, *i. e.*, of the dimensions proposed, three good laborers can quarry and raise, and place on rollers in readiness for hauling, at the rate of one square of one hundred cubic feet per day. The number of working days, exclusive of Sundays and other days lost, may be estimated at twenty-two per month.

Three laborers cost \$12 per month.....	\$36 00
Provisions for three laborers, 30 days each, at 23 cents.....	20 70
Cost per month	<u>56 70</u>
Cost per square.....	2.5773
Medical attendance1210
Use of tools, implements, and machinery, rollers, plank, &c., say 3 per cent8096
Total cost of quarrying and placing upon rollers	<u>3.5079</u>

Hauling to the landing.—Four mules with cart and machinery can haul to the landing $1\frac{1}{2}$ squares of stone per day. The cost per day may be estimated at \$5; or, per square, \$3.3333.

Transporting to the work across the river.—Twelve men, with one scow, can load and transport to the wall six squares of stone. Cost of this labor, \$1 per day; or, per square, \$2.

Cutting and dressing.—Fifteen men can cut and face seven squares of this stone per day. Cost of this labor, \$1 $\frac{1}{2}$ per day; or, per seven squares, \$20; or, per square, \$2.8571.

Laying the wall.—Fifteen men can perform the same quantity of work as in the preceding article and at the same cost, \$2.8571

Cost of stone, delivered as above.....	\$8.8312
Add for wastage 10 per cent.....	.8831
Cost of cutting and laying in the wall	<u>\$9.7143</u>
Cost of masonry per square.....	5.7142
	<u>15.4285</u>

Or, in round numbers, it may be estimated at \$15 50 per square.

From the foregoing data may be made the following estimate:

1. Sea-wall from the termination of the old wall to the barrack wharf, 950.4 squares, at \$15 50.....	\$14, 731 20
2. Two breakwaters, or jetties, projecting into the river, 330 feet in length, each 20 feet wide. Average section of masonry 200 feet, or 100 feet on each side = 1,320 squares, at \$15 50.....	20, 460 00
3. Embankment of earth, (brought from Anastasia island,) 3,600 feet in length. Average sections, 100 feet = 17,037 cubic yards, at 50 cents per cubic yard.....	8, 518 50
4. Filling jetties with earth, 4,400 cubic yards.....	2, 200 00
To the foregoing append: Additional repairs of Fort Marion, as follows:	
1. Of 100 running feet of wall in front of the fort, 40 squares.....	620 00
*2. New gate and bridges	800 00
*3. New flooring, doors, and windows to eight arches	2, 000 00
Total amount of estimate.....	<u>49, 329 70</u>
Add for unforeseen expenses.....	670 30
Aggregate of estimate, including unforeseen expenses	<u>50, 000 00</u>

JANUARY 21, 1834.

S. TUTTLE, *Lieutenant United States Corps of Engineers.*

Dr. W. H. SIMMONS, *in behalf of the citizens of St. Augustine.*

St. AUGUSTINE, *January 21, 1834.*

SIR: At your request, in behalf of the citizens of St. Augustine, I present you with the foregoing estimate and accompanying plan of the city of St. Augustine.

Having carefully examined all the details of the encroachments of the sea, and of the destruction of property (I think public as well as private) by the violence of the waves, I see no other permanent mode by which your city can be protected from a continuation of those disasters than the one pointed out in the plan and estimate herewith.

The repairs estimated for Fort Marion will undoubtedly be useful and important, (although, I think, not included in the late law of Congress,) if not indispensable, on account of store rooms, prison rooms, (for which purpose a portion is now used,) and, perhaps, for other county as well as military purposes.

I have the honor be, very respectfully, your most obedient servant,

S. TUTTLE, *Lieutenant United States Corps of Engineers.*

Dr. W. H. SIMMONS, *in behalf of the citizens of St. Augustine, present.*

* These items cannot be estimated in detail in consequence of the uncertainty of the cost of the materials, workmanship, &c., requisite therefor, or of the place from whence they must be procured. It is hoped, however, that these amounts will prove sufficient.

23D CONGRESS.]

No. 578.

[1ST SESSION.]

ANNUAL STATEMENT OF THE ARMS MADE AND EXPENSES INCURRED AT THE NATIONAL ARMORIES IN 1833.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 12, 1834.

WAR DEPARTMENT, April 10, 1834.

SIR: I have the honor to transmit a statement of the expenditures incurred and the arms manufactured at the national armories in the year 1833, prepared in conformity with the provisions of the act of April 2, 1794.

Very respectfully, your most obedient servant,

LEW. CASS.

HON. ANDREW STEVENSON, *Speaker of the House of Representatives.*

ORDNANCE OFFICE, Washington, April 9, 1834.

SIR: In pursuance of an act concerning arsenals and armories, passed April 2, 1794, (5th section,) I have the honor to transmit herewith statements of the expenditures at the national armories, and of the arms, &c., manufactured therein during the year 1833.

I have the honor to be, sir, respectfully, your obedient servant,

GEO. BOMFORD, *Colonel of Ordnance.*HON. LEWIS CASS, *Secretary of War.*

Statement of the expenditures made at the national armories, and of the arms, &c., manufactured therein during the year 1833.

REPORT OF LIEUTENANT ALLEN, OF THE ARMY, OF H. B. SCHOOLCRAFT'S EXPLORATION OF THE COUNTRY AT AND BEYOND THE SOURCES OF THE MISSISSIPPI, ON A VISIT TO THE NORTHWESTERN INDIANS IN 1832.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 12, 1834.

WAR DEPARTMENT, April 11, 1834.

SIR: In obedience to a resolution of the House of Representatives of the 28th of March, 1834, I have the honor to transmit a copy of the map and report furnished this department by Lieutenant Allen, who accompanied H. B. Schoolcraft, esq., to and beyond the sources of the Mississippi river, on a visit to the Northwestern Indians, in the year 1832.

Very respectfully, your most obedient servant,

LEW. CASS.

HON. A. STEVENSON, *Speaker of the House of Representatives.*

HEADQUARTERS OF THE ARMY, Washington, May 9, 1832.

SIR: I have been informed that Mr. Schoolcraft intends making an expedition into the Indian country, under the authority of the War Department.

You will detail an officer and ten or twelve men to make a part of that expedition. The officer will be directed to keep a journal of the expedition; to describe the country through which it may pass; to

You will detail an officer and ten or twelve men to make a part of that expedition. The officer will be directed to keep a journal of the expedition; to describe the country through which it may pass; to

delineate, topographically, the route and several points of importance; to ascertain the manners and characters of the various Indian tribes, their numbers, strength in warriors, condition, mode of living, of obtaining subsistence, whether at peace with their neighbors or not, their places of resort for foreign supplies, how supplied, and by whom. He will also be directed to note the nature of the soil, the geology, mineralogy, and natural history; he will remark upon the game and fishes, as to quantity, quality, and facilities of procuring them.

The officer will transmit his report to headquarters, for the information of the general-in-chief, and to be laid before the Secretary of War. He will be considered as on topographical duty during the time he may be absent from his post and engaged in the expedition. The men will have the extra allowances accorded to soldiers on fatigue duty. The officer will report to Mr. Schoolcraft, and take his directions.

I am, sir, with respect, your obedient servant,

A. MACOMB, *Major General, Commanding the Army.*

Captain Wilcox, or officer Commanding Fort Brady.

Copy from the records of Fort Brady.

J. ALLEN, *Lieutenant and Post Adjutant.*

SPECIAL ORDER—No. 2.

HEADQUARTERS, *Fort Brady, June 6, 1832.*

In obedience to general order, dated May 9, 1832, Lieutenant Allen, Corporal Wibrn, of K; Privates Briscoe, Beemis, Burke, Dutton, Ingram, and Riley, of B; Privates Copp, Lentz, and Wade, of K companies, are detailed to accompany Mr. Schoolcraft on his expedition into the Indian country. Lieutenant Allen will be furnished with a copy of the order, by which he will be governed.

The acting assistant quartermaster will furnish a boat to transport the party.

D. WILCOX, *Captain 5th Regiment, Commanding.*

Copy from the records of Fort Brady.

J. ALLEN, *Lieutenant and Post Adjutant.*

FORT DEARBORN, *November 25, 1833.*

SIR: In obedience to the foregoing orders and instructions, I have prepared the accompanying map and journal, which are now most respectfully submitted as embracing my report on the several subjects to which you have directed my attention.

I have been induced to report in this form because, from the circumstances of my position on the expedition, I was not able to collect sufficient facts on which to base a full and separate report under each of the various heads mentioned in your instructions; and I have thought this the best method of combining the observations which I was enabled to make, so as best to comply with your views, and to acquit myself of a responsible duty; and because in this way I could present all my remarks in the most concise shape.

The route of the expedition was up Lake Superior to Fond du Lac; thence up the Fond du Lac river ninety-one miles, to the mouth of the East Savannah river, and across by the latter river, the Savannah portage, and the West Savannah river, to Sandy lake and the Mississippi; thence up the Mississippi, through Lake Winnipeg, Upper Red Cedar or Cass lake, and Lac Traverse, to *Lac La Bûche, or Elk lake, the source of the river*; thence, returning, back to Cass lake, and across the country by small lakes and portages, to Leech lake; and thence across again, by little lakes and portages, to the source of Crow Wing river, and down this to the Mississippi again; down the Mississippi fifty-nine miles below the Falls of St. Anthony, to the St. Croix river, up the latter to its source, in Upper Lake St. Croix; and thence down the Bois Brulé river to Lake Superior; again, twenty miles from Fond du Lac river, by which we had left the lake on our way up, and thence back to the Saut de Ste. Marie, the point from which we started.

We were absent eighty days, between the 6th of June and 26th of August, and travelled in that time two thousand eight hundred miles.

The facts and observations collected on this route, and herewith presented, are all that my time and means would allow me to collect; and I have endeavored, in the following pages, to lay them before you as they were brought under my notice by the journey and operations of each day; and wherever they are not as full and satisfactory as your instructions would seem to require, the reasons for the deficiency are to be found in the limitation as to time and means, which necessarily and unavoidably applied from my subordinate situation to the principal and conductor of the expedition, and my duty as commander of the detachment of troops constituting the escort.

The primary objects of the expedition, and consequently of Mr. Schoolcraft, being to vaccinate the Chippewa Indians, our movements between points for this purpose were generally rapid, scarcely allowing a mere passenger to make many useful observations on subjects of science connected with the country; and when, in connexion with this, it is considered that I had solely the charge and care of the transportation and subsistence of a detachment of soldiers, under circumstances of great difficulty, it will probably not be expected of my observations on several subjects made at the same time, that they could be very minute and complete. Hence the subject of botany, and one or two others, could receive but little attention, and are not much noticed beyond such remarks as would occur to a hasty observer. To the former subject Doctor Houghton, the surgeon, devoted much attention, and will probably give the result to the public.

On the subjects of geology and mineralogy I have been enabled to collect many useful facts, which are communicated principally in my description of the route up Lake Superior, and contained in my journal

between the 7th and 25th of June. My observations on this part of the route are more full and in detail than on any other, as I was enabled to make them from travelling it twice, going and returning. We saw but little rock formation elsewhere.

From the source of the Mississippi to the rapids below Crow Wing river, rock in place is seen but once: at the Falls of Pacagama, one hundred and fifty miles above Sandy lake, where the river runs through a formation of granular quartz. All the formations that did occur, however, are properly noticed in their appropriate place. The poor pine hills about the source of the Mississippi are broken down, primitive rock, showing numerous fragments and pebbles of the quartz gems, and of hornblende, feldspar, mica, &c.

On the subject of Indians, I have endeavored to comply strictly with your instructions, and have given information derived from the most authentic sources, much of it from the Indians themselves, but mostly from their particular traders; in obtaining which, particularly the census of the several bands and villages, I was much assisted by the politeness of Mr. Schoolcraft and Doctor Houghton.

The value of the trade in furs and facts relating to it were mostly furnished by Messrs. Holiday, Warren, Oakes, and Aitkin, of the American Fur Company, who enjoy most of the trade of the country.

It will be perceived that the condition of the Chippewa Indians is rapidly approaching a crisis, when their increased population and decreased resources must bring upon them great calamities, unless a considerable change is previously effected in their means of subsistence and mode of life. Since the humane measures of the government for the stoppage of whiskey in the Indian trade, they have increased and are increasing rapidly; but the furred and large animals of the country, upon which is their great dependence for their very existence, have diminished in a converse ratio, and are every day becoming more scarce. And yet these Indians, with a characteristic improvidence and blind fatuity, have not made, nor are making, any other provision for their future wants and contingencies, but, on the contrary, manifest, by a continued adherence to their established and peculiar habits of living, an apathy and indifference to their approaching condition of want and misery altogether inexplicable and astonishing.

Their vast country, though generally poor, has land enough of the richest quality to afford a subsistence by cultivation for ten times their present population. But they have not anywhere sought a living from agriculture; and in parts where the soil is richest and the Indians most in need, they have been the least attentive to this means of supplying their wants, although some of them, as those about Fond du Lac and along the shores of Lake Superior, have already experienced, during two or three severe winters, much suffering from starvation, and many of them must have perished but for a scanty relief furnished by their traders.

All the Chippewas north and west of Lake Superior entertain unfriendly feelings to the government of the United States, and would undoubtedly embrace another occasion, similar to that of the last war with Great Britain, to join and assist an English or other powerful enemy; but their hostility amounts to nothing, for they are too poor and weak to attempt to war themselves, and are restrained by motives of fear and interest from deprecating much upon their traders. Those at Leech lake and about the sources of the Mississippi are the least friendly, as my account of them represents.

About the time of the removal of the British traders from this country it had commenced the decline in Indian resources, which has gone on steadily ever since, until the country is now poor, compared with what it was in the time of the Northwest Company and British trade; and the Indians, contrasting their present condition with their former, and without the judgment to know and assign the true cause of the difference, attribute their present comparative distress and want to the change of government and traders effected at the time referred to. And this will account for much of their present hostile feeling to the American government and traders.

All the Chippewa Indians have a most inveterate and irreconcilable hatred for their border tribe and natural enemies, the Sioux, which, being duly reciprocated by the latter, keeps them both, near their borders, in a state of constant insecurity and warfare, and leads to endless aggressions on the part of each. The Chippewas, however, from their poverty and weakness, suffer most from this state of things, and are seldom able to pursue an offensive war, or to carry their operations much beyond their own country. Whereas their enemies, from their superior numerical strength and abundant resources in means of subsistence, are enabled to push their excursions into the Chippewa territory until they are resisted by the inaccessible nature of the country.

The Chippewas remote from their lines, as those along Lake Superior, at Fond du Lac, &c., are seldom engaged in these wars, or much affected by them; but their border brethren at Leech lake, Red lake, and along the Mississippi, are never at peace. The Leech Lake band particularly, being the largest single band of the tribe, and occupying a place near the lines, and made secure by the fastnesses of their lake, are in a state of constant excitement, either from the depredations of their enemies, or their own upon them; and they suffer and resent more than any other band. They also possess more of the qualities of savage warriors than any other Indians whom we visited. For a particular account of them see journal, July 16.

Our route, excepting a small portion of it on the Mississippi above and below Fort Snelling, in the Sioux lands, was entirely in the country of the Chippewas, and we saw no other Indians excepting a few of the Sioux at Fort Snelling and on the river below.

The accompanying *map* is a "delineation of the route and several points of importance," and is as correct a representation of the country as my means of observation would allow me to make it. The collection of materials for this object received as great care and attention as was necessary to supply a deficiency of proper means for this purpose.

I was not furnished with, nor could I procure at Fort Brady, any instruments by which to fix, from astronomical observations, the true geographical positions of points necessary to be known for the construction of an accurate map; and, to obviate this inconvenience, I had recourse to a method of tracing the whole route between the few points fixed and given by the observations of former travellers. For this purpose a compass, the only instrument I had, was placed in my canoe, where it was constantly under my eye, and, as the canoe proceeded in the line of a river, I carried my observations from the compass to a field-book at every bend or change of direction, thus delineating, on a large scale, in my field-book, all the bends of the river precisely as they occurred; and, by establishing a scale of proportion in the lengths of the reaches, I was also in this way enabled to lay down and preserve the general course of a river with surprising accuracy, as was tested afterwards in constructing on my map the routes of rivers between known points. The distances were estimated with great pains and care from the combined judgments of all the gentlemen of the party on our rate of travelling, which was very well deter-

mined from our travelling much on known distances. Moreover, many of the distances, as the lengths of rivers and diameters of lakes, were long determined by traders and voyageurs, who could judge of them very well from having travelled them much. The portages were well enough measured by pacing them, and their direction was defined in the same way as that of the rivers.

On the portion of the Mississippi above Cass lake, which was the least known of any part of the river and route, I bestowed on the tracing and computing of distances the most unremitting attention; and, as I had by this time acquired a great facility in my method, I feel a confidence that the character, course, and length, as represented, of this interesting part, approaches a great degree of accuracy; and the place which I have thus given to Lac La Biche, the source of the great river, may be regarded as being very near its *true position*. This is on the supposition that Cass lake, to which Lac La Biche is thus relatively fixed, has its true geographical position from the observations of the astronomer, Thompson.

My observations on this part of the route, given on the map and in my journal between the 11th and 16th of July, may be viewed as settling definitively the question of the true source of the Mississippi, which has excited some interest and curiosity, and upon which map-makers have heretofore been seemingly uninformed, as, on all the published maps that I have seen, the river above Cass lake is incorrectly laid down, and Lac La Biche is placed *north* of Cass lake instead of *south* of it, as it should be.

I have placed Lac La Biche about in latitude $47^{\circ} 10'$, and longitude west of Greenwich $95^{\circ} 54'$. It is 165 miles above Cass lake, and 1,029 above the Falls of St. Anthony.

Our route from Leech lake down the Crow Wing river has also developed new facts in the topography of the country, in the source, length, and character of that river, which claims an interest from its being the largest branch of the Mississippi above the Falls of St. Anthony.

The description of the St. Croix and Bois Brulé rivers, of our route returning from the Mississippi to Lake Superior, is also new.

The country embraced by the map, and which did not come under my immediate observation, is described from Indian maps, drawn by Indians well acquainted with it, and from the maps and descriptions of traders. The number of the rivers and their length and direction is not far from the truth.

The southern shore of Lake Superior, a part of our route, is omitted in the map, but its topographical features are described in the journal.

In my letter to you of September 13, 1832, I had occasion to mention the separation of Mr. Schoolcraft from the detachment on the St. Croix river. The circumstances of that separation are reported in my journal of the St. Croix, July 29.

I have the honor to be, with the greatest respect, sir, your most obedient servant,

J. ALLEN, *Lieutenant Fifth Infantry.*

Major General MACOMB, *General-in-chief.*

Journal of an "expedition into the Indian country," to the source of the Mississippi, made under the authority of the War Department in 1832.

June 7.—The party organized for this expedition consisted of Mr. Schoolcraft, who had the principal conduct of it; Doctor Houghton, the surgeon, to vaccinate the Indians; Mr. George Johnston, interpreter; Mr. Boutwell, a Presbyterian missionary, and twenty engagés or Canadian voyageurs, in the employment of Mr. Schoolcraft; and the military part, consisting of myself and ten soldiers from the companies at Fort Brady, making an aggregate, of the whole party, of thirty-five souls.

This party may be considered as divided into two parts: that organized by Mr. Schoolcraft, and under his immediate direction and subsistence, and the escort or military part, under my command. I shall therefore designate the former, throughout this journal, as Mr. Schoolcraft's party, or Mr. S. and party, which will be understood to embrace all excepting the escort, the latter being transported and subsisted under my direction.

All our preparations having been completed, we embarked from Saut de Ste. Marie about five o'clock in the afternoon of the 7th of June.—Mr. Schoolcraft and party, with their baggage, in one large Mackinac boat and two bark canoes, and the soldiers and myself, with our arms, ammunition, and provisions to last us to Fort Snelling, in a small Mackinac boat. The boats are intended for our journey along Lake Superior, and will be abandoned at Fond du Lac, where, for river navigation, we shall be compelled to use the Indian bark canoes. Our object being, for this day, merely to make a start, we went but six miles, to Point aux Pins, on the Canada side of the St. Mary's river, where we encamped for the night. This is a point of very general encampment for the traders, and is always considered by them, departing from Mackinac or the Saut de Ste. Marie, as their first point in the Indian country. Here the prices of their goods change, and any article sold at this point, or beyond it, to any of their hands or engagés, is charged at what they denominate the "interior price," which is the same as that placed on their goods at their several trading posts in the Indian country. The St. Mary's river expands greatly above and below this place, and all of it above might be regarded as a bay of Lake Superior were it not that there is a perceptible current almost to the lake. Point aux Pins is a low, sandy barren, with a few detached pines growing on it. A small stream enters the St. Mary's a few hundred yards below the extreme point, called Carp river, very remarkable for the great quantities of carp fish it contains at some seasons of the year. Two hundred yards from its mouth the stream is eight feet wide and four or five deep, and in the spring of the year is literally filled with these fish. I had visited it on a former occasion and found them so abundant that with ten strokes of a spear I killed nine fish, most of them about a foot long, and when the water was so muddy from their moving in shoals that I could not see any of them, but judged of their situation only by the motion of the water, occasioned by their moving in such great numbers.

June 8.—Made an early start and soon passed into Lake Superior between Gros Cap and Point Iroquois, the two points which mark the exit of the lake by the St. Mary's river, which, at this place, is nine miles broad, and seems, from the similarity in appearance of the two capes, at a very remote period to have forced its way through a continuous mountain that once united them. It has been supposed that an analogy existed between the rock formation of these points; but on a former occasion, about a year before our present visit, Doctor Houghton and myself made a careful examination of Point Iroquois, of the American side, and could discover no rock whatever; its character, therefore, in this respect, is still conjectural. The name "Iroquois" is given this point and a small island of the lake near it from a massacre at this place of Iroquois Indians, by the Chippewas, a long time ago. Gros Cap, immediat'y

opposite, on the Canada side, is a large granitic bluff, rising at first perpendicularly to a height of 150 feet, and afterwards more gradually to a whole height of near 500 feet. It is a remarkable point in the great chain of granite mountains that confine Lake Superior to the north.

Turning Point Iroquois the lake extends westwardly, forming a great bay between this and Whitefish Point, the distance across being 24 miles, and the depth of the bay, from a line joining the two points, 20 miles. This bay receives the Tequamenon and Shelldrake rivers. I made its direct traverse in a direction northwest, by which I reached Whitefish Point before the canoes and the other boat, which coasted the bay, but all turned the point near a mile, and encamped together at sunset on a sandy beach.

Whitefish Point is a low, long, narrow tongue of land, running, in an easterly direction, very far into the lake, and dips so gradually under the water as to form a shoal far beyond its extremity. About a mile and a half of the end of the point is composed of shifting sand and gravel, but a few feet elevated above the surface of the lake, and is perfectly barren of vegetation; the part back of this is low and very sandy, but a stunted growth of white and pitch pine, and a few small birch and white cedars, with some shrubs, have rendered the soil more fixed.

On the north side of the point the sand is very fine, (siliceous,) and about a hundred yards from the shore is blown into numerous insulated hillocks or steep mounds, from 20 to 50 feet high, partially covered with a small vegetation, which prevents their being destroyed by the same cause that formed them. The extreme point is made entirely of small pebbles of granite, quartz, hornblende, &c., very round and smooth.

This point is remarkable and important as a fishery of whitefish—as affording more and a better quality of that excellent fish than any other fishery of the southern shore of the lake yet explored. It has been long known as a point where this fish could be taken in gill-nets at certain seasons of the year; but no use was made of it more than is at present of several other fisheries of the lake, where a few Indians, or an individual trader, procure only what is necessary for their immediate subsistence. But within the last two years the enterprise of two gentlemen, Mr. Ashman and Mr. Roussin, who had retired from the fur trade of the American Fur Company, has developed many facts in relation to this fishery tending to show its importance as a source of business and profitable trade.

These gentlemen commenced the business of fishing at this place two years ago, without any particular knowledge or experience with regard to the seasons, localities, or the best means of taking the fish, and notwithstanding these disadvantages have made it a source of considerable profit, and are encouraged to continue it more extensively.

The fishery, as at present developed, commences at Shelldrake river, nine miles from the end of the point on its eastern shore, and extends round the point and along the southern shore of the lake, as far as the Grand Marais, or the commencement of the Grand Sable, a distance of fifty-four miles. The bottom along this part of the coast is sandy, and falls off gradually into deep water, and the shore is a sandy beach—circumstances favorable to the safety and easy working of the nets. The fish occur in equal numbers in every part of its whole extent, but the point is the most desirable locality, from its generally affording, on one or the other side, a lee and smooth water, where the nets may be used during winds. The fish are taken by means of the gill-net alone, the meshes of which are of a size adapted to the fish's head, so as to fasten in the gills when the fish attempts to withdraw its head after having inserted it in an attempt to force its way in the direction of its movement. The nets are generally eighty fathoms long and from five to ten feet broad, according to the depth of the water, and are set in a vertical position by leads or sinkers that rest on the bottom and floats of sufficient buoyancy to support the weight of the net and hold it up. They are tended by fishermen employed for the purpose, two of whom can tend and manage, in fair weather, ten nets, which will yield every morning from one to six barrels of fish. The management of nets consists in merely raising them, relieving them of their fish, and dropping in the same place once each day, which is done by running a canoe along their course and raising and dropping as the canoe progresses. These nets cost about six dollars each.

The fishing season commences here in the spring, (when the largest and best fish are taken,) about the last of April, and ends about the last of June; and in the fall occurs in October and part of November; making the whole season a little more than three months. The rest of the year the whitefish remain in the deep water of the lake. It is remarkable that at no other known fishery of the lake can the whitefish be taken in quantities in the spring; and equally so, that those of this fishery are larger and better than any of the others. It is also a peculiarity of this fish that they are fatter and better in proportion as they are larger. Some taken here weigh fourteen or fifteen pounds, but the average weight is, in the spring, twenty-five to thirty fish to the barrel of 200 pounds, and in the fall, thirty to forty. The superior quality of the Lake Superior and Sant de Ste. Marie whitefish causes them to bring, in Detroit, from one to two dollars a barrel more than any other whitefish of that market. Much of the resources of this fishery, as also the best means of working it, remain to be discovered, and consequently no estimate can be formed of its future value to trade. Messrs. Ashman and Roussin have put up at Whitefish Point, within the last two years, 559 barrels; others, in the same time, and at the same place, have put up 313 barrels; making the whole proceeds for the above time 872 barrels, worth in Detroit six dollars per barrel, or \$5,234.

It is probable that there are many other rich whitefish fisheries along the southern shore of the lake, but they are, as yet, unexplored. The northern or Canada shore is said to afford many, as also superior advantages for fishing, from the coast being more serrated by bays, and protected by numerous islands from the effects of winds and seas, that greatly annoy the fishermen on the southern shore.

June 9.—Mr. Schoolcraft's boat, managed by Frenchmen, and carrying most of his provisions and baggage, did not reach our encampment until late last night; this circumstance determined him to strengthen the crew of the boat by that of Mr. Johnston's canoe, which was accordingly abandoned, and Mr. Johnston placed in charge of the boat, with Mr. Boutwell as passenger, Mr. Schoolcraft and Doctor Houghton occupying the light canoe as before; which, being manned with a full crew, was able to travel at a much speedier rate than either of the boats. We left our encampment after breakfast, at six o'clock, and, following the coast, took a direction nearly due west, which changed in the forenoon to 10° south of west, and in the afternoon to S. 30° W. I got to the Grand Marais at 10 p. m., where Mr. S. and party were already encamped, his boat being now able to precede mine, from the superiority of the boat and crew. The whole of the coast passed to-day presented a very plain bank of fine sand from twenty to a hundred feet high, and a continued forest of pine, generally small, but sometimes large and beautiful. A picturesque grove of white pine (*pinus strobus*) of more than a mile extent along the lake occurs about ten miles from our encampment. The growth is all large and unmixed with any other trees, the pines straight, tall, without limb, and thickly set together on level ground as far back as we could see.

We passed Twin river, twenty-four miles from Whitefish Point. It is a small stream, and its mouth is so much filled with sand that it can only be entered by very light craft, and in smooth water. We have travelled to-day forty-five miles.

June 10, (*Sunday*).—This being the Sabbath, by a rule of Mr. Schoolcraft's, we do not travel, though the weather is fine. The rule, however, is convenient in observance, as it gives the men time to wash, bake, &c., which they have but little time to do when travelling. We are lying in a beautiful little bay, called the Grand Marais, from its having once been a marsh, which, within the recollection of some old voyageurs now present, has been washed away to its present state. It is a safe harbor for boats, and is important from its being the only one between Shell-drake river and Grand island, a distance of near one hundred miles. It is half a mile in depth, opens to the west, and is difficult to enter with a strong west wind and heavy sea, which drive right into it. Traders have met with serious accidents in attempting to run into it under such circumstances. The country about here has nothing peculiar in its appearance; hills are seen to the S.S.W. covered with thick forests of birch and pine.

The Grand Sable, or Great Sand, commences from the west of the entrance to this harbor.

June 11.—Left our encampment at Grand Marais at two o'clock in the morning, and passed the Grand Sable before daylight. This is a great deposit of loose, fine, siliceous sand, which forms a plain coast for about nine miles, rising abruptly from the lake at an angle of near 45°, and to a height of about three hundred feet. It is sustained at so great an angle by its moisture, for it is otherwise uncemented, and gives way under the feet, making its ascent almost impracticable. It is deposited in three layers or beds, which are distinguishable by a slight difference of color, and rests on a flat rock of variegated sandstone, which is seen a few feet under the surface of the water, near the shore. The summit is in a plain of the same loose drifting sand, which extends back for some miles, and is perfectly barren, containing imbedded trunks of trees. In this plain, about a mile and a half back, there is a small lake of more than a mile and a half in circumference, of clear, transparent water, and of apparently great depth, enclosed by a beautiful low bank of clear sand, and a beach of small pebbles. This lake is the source of a branch of the Tequameon river, that empties into Tequameon bay between Point Iroquois and Whitefish Point, and is remarkable from its occurring in the middle of a sandy plain.

As we progressed the Grand Sable gradually fell off into a low sandy bank, thirty or forty feet high, covered with a small growth of pine, birch, sugar-maple, and beech, (*fagus ferruginea*), which continues for about twelve miles, and terminates in the grand sandstone formation called the "Pictured Rocks," which constitutes twelve miles more of the coast to Grand island. This is the most beautiful and picturesque part of the whole southern coast of Lake Superior.

The formation is the "red sandstone," which rises gradually to the height of three hundred feet, in strata nearly horizontal, and from one to eight feet thickness, forming a perpendicular and projecting wall, with but one or two interruptions, from the point where it is first seen to the entrance of the harbor of Grand island, where it leaves the lake, and, turning to the south, disappears in wooded hills. This wall rises perpendicularly out of the water, which is apparently of great depth immediately at the base; and in places where the falling down of upper portions of the rock has been recent it is perfectly vertical, with the regularity of masonry from the base to the summit. But generally the rock is projecting, the undermining operations of the water and frost at the base not having progressed far enough to allow the whole entablature above to split and tumble over from its own weight.

The effect of the long action of the lake on this rock is here curiously exemplified, and can be distinctly observed to a height of more than one hundred and fifty feet above the present level of the water, proving conclusively that at some remote period the water of the lake stood at nearly that height above where it now is. The surface of the rock is not regular, presenting many angular and rounded points and notches, or little coves and bays; and where parts were softer than the general rock, and where water oozed from between the strata near the base the action of the frost internally, and of the waves externally, has worn out caverns, domes, and arched ways of great extent and singularity. In some places water containing vegetable and mineral matter has run from the strata near the top and striped the surface down to the bottom in all varieties of colors. The general surface is almost continuous for about twelve miles, in a direction a little south of west. It is only broken in one or two places by small streams and their little valleys, the largest of which is Miner's river. This stream, which was too small to admit our boat, has its mouth in a little sandy bay, to the east of which the bluff terminates in a remarkable feature, called the "Dorick Rock." This is a large slab or tabular rock of about fifty feet in diameter and eight feet thickness, supported on the side next to the bay by four columns, the largest of which is about seven feet through, and the smallest about three feet; the other side being supported by the main rock, of which it is a part. The whole structure presents four regular and distinct arches, two of which, being perpendicular to the shore, may be seen from the lake; the other two are radiant to the great arch, and nearly parallel to the shore. The large arch has a span of about thirty-five feet, and a rise of one-fourth the span. Its floor is inclined to the lake, making the height of the soffit at the entrance forty feet, and at the egress eighteen feet, the soffit or interior surface of the arch being horizontal. The lesser arches have a span of from five to eight feet in the same plane with that of the large arch, but their floors are higher. The columns are round, and have almost the regularity of masonry.

This structure is elevated at its base forty feet, and at its summit one hundred feet above the lake, and is the extreme point of the bluff, which it terminates perpendicularly. The top of the rock is covered with a vegetable soil and a growth of timber, among which are three pines of from two to three feet diameter.

The Dorick Rock is but one of the features of this part of the coast; there are many others equally curious and beautiful, and the whole presents a scenery of grandeur and beauty not surpassed, perhaps, by any other scenery of our country.

From the Pictured Rocks we entered the eastern channel to the harbors of Grand island, and, passing round the island, encamped on the southern shore of the western channel at a trading house. Grand island is a large and elevated island of about twenty miles circumference, and stands very little out into the lake beyond the line of the coast, with a broad channel running round it. Back of the island the channel expands into large deep bays that run into it and the main land, forming commodious and safe harbors for vessels. Next to the lake it presents high sandstone bluffs, but its other side falls off into a low shore. On a low sandy point of the south side of the island there is an Indian village with a present population of fifty-nine souls: thirty-five males and twenty-four females; warriors, twelve.

These Indians are well clothed, and look healthy. They derive their subsistence from the fish of the bays of Grand island—herring, trout, and small whitefish—which they take with the spear and in gill-nets,

and from some game, principally the common red deer, which they kill between this and Lake Michigan; and from their trader, who supplies a part of their provisions in winter. The present trader is Mr. Nolan, a clerk to Mr. Holiday, of Keewaywenon Bay. He made last year three packs, worth \$900, principally beaver, martens, and muskrats.

Twenty of the Indians now of this village belong rather to Presque Isle, forty miles above, where they live and hunt most of the year. We have travelled to-day forty-three miles. The soil about the trading house is rich and heavily timbered, mostly sugar-maple and birch, and the land is said to be of good quality from here south to Lake Michigan.

June 12.—We were detained at our encampment by a head wind until 10 o'clock a. m., when, the wind falling, we got out of the western channel and attempted to make the traverse of a deep bay, twelve miles across in a due west course, but the old sea ran so high that most of my men became sea-sick, and Mr. Schoolcraft, unable to proceed in his canoe, ran into the bay and made a harbor in the mouth of a small river, where we encamped, having come but about eight miles. This little river has its channel at the mouth through a flat sandstone rock, and is hence called "La Rivière au Galet." It is small, barely admitting our boats. The land here is sandy and poor. Two miles further, in the bottom of the bay, is the river Aux Trains, and near it an island of the same name.

June 13.—On leaving this bay we passed a low, rocky shore, four or five miles, and taking a direction due west, which left the shore some distance to our left, we reached Presque Isle at two o'clock p. m., a distance of thirty-two miles. I could only see the shore sufficiently to notice its indentations by little bays, and that the land was low, with a sandy beach all the way. Nine miles from the river Aux Trains we passed Laughingfish river; fifteen miles further, Chocolate river; and six miles further, Dead river, in Presque Isle bay—all small.

Presque Isle is geologically interesting. It is a mass of serpentine rock, about two miles in circumference, rising gradually on all sides to a height of two hundred feet. The peninsula extends far into the lake, and is connected with the main land by a low, narrow, sandy isthmus, fifty to one hundred yards broad, covered with pine. The rock is the common serpentine, but does not exactly answer to any description of that rock that I have seen, and in some of its characters it resembles chlorite. Its texture is compact, and its grain fine; it is harder than the usual varieties of serpentine, is difficult to cut with a chisel, or to scrape with a knife; its fracture is earthy and uneven, and has a dark dull color, with very small whitish veins, traversing it in different directions; when polished it exhibits a beautiful, clear, smooth surface, very prettily variegated with different shades of dark green. The mass of the rock is traversed with numerous veins of the precious serpentine, running apparently through it in different directions and with different inclinations. These veins may be distinctly traced on the surface, exhibiting the precious serpentine in many varieties of color. They vary from one-fourth to three or four inches in breadth, and each vein is composed throughout of the same variety. Some exhibit it compact, opaque, and almost white, with a light tinge of yellow and green; in others it is seen of a dark, clear, leek green, beautifully translucent. But the finest variety occurs in the broader veins, and in the asbestos form, of a beautiful deep green color, transparent, and polishes well. Its fracture, in the direction of its fibre, exhibits the structure of compact asbestos, and is lustrous, but occasionally shows very small fibres of asbestos; a fracture perpendicular to the fibres shows a very close, compact texture. Another very curious variety was discovered in a small vein; it was of a light green color, opaque, and veined in the manner of the agate.

The great mass of the rock rises gradually from the lake, and on the north side; it was not too steep for us to land on it and walk up its surface, which is generally smooth and regular, and of a very dark, glossy appearance, somewhat resembling hornblende rock. It presents large fissures or openings, however, in one of which I ran my boat three or four times its length, into a little cove with a gravel beach and perpendicular walls all round it, where pyrites of iron were found among the pebbles. On the top and north side the rock is covered with a small growth of trees and bushes; on the east side, for perhaps one hundred feet at the base, it is overlaid with rotten red sandstone, which being broken off perpendicularly toward the lake, shows the line of coincidence of the two rocks as it emerges from the water.

Having procured some specimens of the rock and veins, and made this imperfect examination, which is all that my time would allow, we passed a bay of five miles traverse, in a northwest course, and touched Granite Point, a high bluff peninsula, very like in appearance to Presque Isle, and connected with the shore in a similar manner. The rock, however, is granite, heaved up in a very irregular and confused mass, presenting numerous irregular fissures, and overlaid with red sandstone for ten or fifteen feet above the surface of the lake, in the same manner as the serpentine rock of Presque Isle. Seven miles further, in the same direction, brought us across another bay, and to a very rough shore of granite bluffs, where we ran into a small stream which came apparently through a fissure of the rock, and encamped, placing our tents on the rock, sixty feet above our boats, but not more than ten feet from them horizontally.

We have come to-day forty-four miles, and have had high peaked, granitic looking mountains on our left nearly all day. The rock about our encampment shows many large veins of greenstone. Mr. Schoolcraft and Dr. Houghton, with the canoe, have their encampment ahead.

June 14.—Leaving our rough harbor, we passed a low sandstone shore of seven or eight miles. A high range of hills was seen off to the south, running northwest and southeast, probably a part of the chain observed yesterday back of Presque Isle. About ten miles from our encampment, the shore shows a very irregular black rock for two or three miles, which on examination proved to be hornblende rock and hornblende slate. This rock projects into the lake in many points, which present, for some distance from the water, a bare, black, glossy surface. Leaving this, the red sandstone shows itself again in high, prominent bluff points, embracing deep regular bays, nearly all of which have low sandy shores and beaches in the bottom of their circuit. Six of these bluff points occur nearly in the same northwest line, in a distance of twenty miles, before we reach Keewaywenon bay—some of them seventy feet high, and all presenting mural precipices to the lake. This sandstone, of which we have seen so much, has a dull, dark red color, occurs in thin strata, and has a very rough, ugly appearance. It contains no organic remains, and is in no way interesting; a thin sandy soil rests upon it, and supports a growth of cedar and pine.

Back of this formation, the chains of granite mountains rise to great heights, and occasionally display the base surfaces of their rugged peaks. They come down to within a mile of the lake, at the entrance to the Keewaywenon bay, where another chain further back runs off to the south, in the direction of the length of the bay.

From the last of the high sandstone bluff points described above, the two boats commence the traverse

of the great bay Keewaywenon, steering north 60 degrees west, to a cluster of little rocky islands which are situated in the bay, about eight miles from the shore, and off the mouth of Huron river, called the "Huron islands." These islands, four or five in number, are great masses of granite, grouped near together, of very rugged aspect and irregular shape. The largest is about a mile in length, one hundred and fifty feet high, and has some little bushes and trees growing in its fissures. The others are bare rock, and served thousands of gulls for nesting places. Some fissures of the large island on which we landed are remarkable. One running entirely through the island in a narrow part of it, allows the water to flow through, though at the top, forty or fifty feet above the water, a person may leap over it. South of the Huron islands is the mouth of Huron river, and six miles west of the latter is a long, narrow point, called Point Abbaye, which is the western cape of Huron bay, and divides it from Keewaywenon bay. Huron bay opens into Keewaywenon bay between Huron river and Point Abbaye, and runs back to the south and southwest, to a distance of more than twenty miles, almost as far as the great bay of which it is a subordinate branch. It is deep water throughout, but becomes very narrow towards the end, and is used as a fishery by the Indians, affording trout, herring, and whitefish.

Keewaywenon bay is the largest and most remarkable of the whole lake. It is thirty-two miles deep from Point Abbaye, in a southwest direction, and its whole depth, from the extreme point of the peninsula of Keewaywenon, is about seventy miles. This peninsula runs far into the lake in a northeasterly direction, and seems to approach Granite Point in such a manner as to make the great bay of Keewaywenon to commence properly between Granite Point and the east end of the peninsula. The distance between these two points is between forty and fifty miles. The voyageurs, however, going up the lake, do not consider themselves in Keewaywenon bay until they get within six or seven miles of Huron river, or the Huron islands. The breadth of the bay from Huron river is thirty miles, and from the islands to the nearest point of the peninsula is twenty-two miles; this is the usual boat traverse in fair weather, and was ours on the present occasion. We left the islands at 3 o'clock p. m., and crossed the bay in a direction little N. of NW. in five hours and a half, encamping at half-past eight behind a sandstone bluff point, in a little sandy bay opening to the northeast. All the traders and voyageurs consider this a dangerous traverse, and boats are frequently detained for several days on one or the other sides of the bay, waiting for favorable weather to cross. We were fortunate in having a perfect calm all the way, and crossed without difficulty or apprehension. The view from the middle of the bay is one of the most beautiful and picturesque of the lake. A high mountain chain that runs along the middle of the peninsula Keewaywenon is seen in front, running far out into the lake till its tops seem just emerging above the surface. Behind, to the S. and SE., the granite mountains that come down to the lake at Huron river show their base surfaces and tops; and the more distant chain, which runs off to the south, gives in the blue distance a distinct outline of innumerable high peaks, connected by curves made regular and well defined by the distance. To the right and left, in the direction of the length of the bay, nothing is to be seen but the beautiful expanse of clear water.

Mr. Schoolcraft, in his canoe, left the boats near the Huron islands, and took the usual canoe route down the bay, intending to visit Mr. Holiday's trading house and an Indian village near the bottom of the bay, and then make the traverse to Portage river in a narrow part, and cross the great peninsula by a portage to the lake on the other side, where he was to remain encamped till the boats made the tour around. The usual route for canoes that make the portage is from Point Abbaye, down the southeastern shore about nine miles, and thence across, in an oblique direction, about twelve miles, to the mouth of Portage river; up this river six miles, to a lake twelve miles long and two or three broad, and through this lake to a little river at its head, which is ascended six miles to its source in a wet savanna; from which, by a portage of one mile, they reach the lake on the north side of the peninsula, which here, and by this route, is twenty-five miles broad.

A distance of ninety miles round the Point Keewaywenon is saved by this route across by the portage. Boats, however, must always coast round the point, and, from the great prevalence of winds and seas so far out in the lake, this part of the route is frequently tedious, difficult, and dangerous.

The number of Indians about Huron and Keewaywenon bays is one hundred and thirty, about half of them males, and about twenty-five of these warriors. They subsist in summer principally on fish, which they take in sufficient quantities in the bays by gill-nets and the spear. Whitefish, herring, and trout are abundant in these bays. In winter they hunt the marten, otter, muskrat, and beaver, and during their hunts are mainly subsisted by their trader, with provisions taken from Mackinac. In this season they depend much on him for their subsistence, and it is questionable if they could now, in the present state of their country, live without the partial supply that he annually distributes to them. Their country is exhausted of the game, deer, bears, &c., that once furnished them food; their fisheries are impracticable at times from the rigors of winter, and many of them would undoubtedly suffer from starvation were it not for the relief alluded to, which is given them for their furs. They get provisions and goods from their trader when he first returns from Mackinac in the fall, and disperse to their several hunting grounds for the winter; from which the men frequently return to bring in their furs and get fresh supplies. The present trader at this post is Mr. Holiday, of the American Fur Company, who makes this his headquarters for two other posts, at which he has subordinate traders or clerks, one at Grand island, and one at the mouth of the Ontonagon river. This gentleman has lived and traded at this post for about twenty-four years, only coming out every summer to Mackinac to sell his furs and get new goods. The Indians of his district now depend on him for their annual supply of clothing, ammunition, &c., for which he usually gets all their furs; but the exhausted condition of their country requiring, in addition to the usual wants of Indians, a great quantity of provisions, the trade of late years has not been profitable, and his whole returns in furs in the spring seldom exceed by more than one thousand dollars the expenses of his three posts. More than half of his annual stock in trade is provisions. He makes usually at Grand island three packs; at his own post, on the bay, ten packs; and at the Ontonagon river, two packs—in all, fifteen packs, worth \$300 a pack, or \$4,500. The furs are principally beaver, martens, rats, otters, and a few bears.

Mr. Holiday is frequently opposed at his several posts by other traders, not of the American Fur Company, but generally with loss to those opposing, for his superior influence over the Indians, acquired from a long residence among them, secures for him all the furs.

June 15.—Started at half-past 3 a. m., and commenced the coasting of the peninsula, along its southern shore, in a general direction a little east of northeast; eight miles took us across a sandy bay of no great depth, and to the mouth of a small river, supposed to be "Tobacco river." It runs out in a mouth about ten yards broad, and eighteen inches deep, with a strong current over a flat sandstone rock, and

has three perpendicular falls over the same rock, all of which can be seen at one view from its mouth. The first, fifty yards from the mouth, is five feet; the second, twenty yards further, seven feet; and the third, ten yards further, eight or nine feet. It is remarkable that so large a river should flow from the peninsula, which is in no part more than thirty or forty miles broad, and has a chain of mountains dividing it in the centre.

A few miles from Tobacco river we met Mr. Oakes, a trader of the American Fur Company, from Lac du Flambeau, his post. He was on his way to Mackinac, with two Mackinac boats, carrying out the furs of his trade the previous winter. Mr. Oakes is the principal trader for the district or department of Lac du Flambeau, between Lake Superior and Green Bay and the Wisconsin river. He has four posts under his charge: Lac du Flambeau, his headquarters; Lac Sable; Chippewa river, and Wisconsin river, which yield, severally, about the same quantity of furs, but varying in different years between 1,500 and \$2000 for each post, and making his whole trade worth between \$6,000 and \$8,000 a year. The Indians of his department get nearly all their goods and necessaries from him, and subsist on the resources of the country, game and fish. In the fall and winter they kill great numbers of the common red deer, which are very plenty about Chippewa river. In the spring and summer, their subsistence is principally fish and berries, and a few furred animals. They sometimes make excursions against the Sioux, but they are not at present at war with any other tribe. They are represented as entertaining, generally, a very unfriendly feeling towards the government of the United States, and are only restrained by fear from depredations on their traders.

Leaving Mr. Oakes, we crossed a large, deep bay that ran eight or ten miles inland, with a sandy bank and beach for about half its circuit, where the mountains came abruptly down, and form the northern shore of rugged massive rock. From this bay the shore inclines a little more to the east, and presents numerous rocky points, with little coves and sandy bays between. Near the end of the peninsula the shore becomes more rocky, rough, and abrupt, and the course is east of northeast till we reach the most easterly point, where it suddenly changes to almost due north, varying but two or three degrees west, for a distance of four miles, when it again suddenly changes to nearly due west, along the north side of the peninsula. That part of the shore that runs north and south is the end of the peninsula Keewayweno, and the most easterly point of it is called "Point Keewayweno." There is no projecting or attenuated point, but the peninsula is here abruptly truncated in a north and south direction, presenting a rough rocky end of near four miles in this course, with a small island, called "Beaver island," about five miles directly off it in the lake.

This is a dangerous part of the coast for boat navigation. The peninsula offers no safe harbor for boats on its extremity, or near it on the south side, and we were anxious to get into a harbor on the north side before dark. My boat, however, was several miles behind Mr. Johnston's, and darkness, a strong head wind, and a thick fog overtook me soon after I turned the eastern point. I was then obliged to grope my way for several miles along a high rocky shore, of most forbidding aspect, against which I was in continual danger of being dashed to pieces, but which I could not leave further than the length of the oars, lest I should lose sight of it, and get lost and be blown off into the lake. In this situation I continued to hug the shore, and contend with the wind and sea, though not without great apprehension, until half-past nine at night, when I ran the boat into a dark opening in the rock, which proved to be a little cove about fifteen feet broad, formed between the main rock and a projecting crag about thirty feet high, and of sufficient length to conceal the boat and protect it from the wind then blowing. The bottom of the cove had been filled in with pebbles for a distance of twenty feet, and on this I encamped, securing the boat by means of cold chisels driven into the rock to make fast to. My experience to-night proves the necessity, in coasting this lake, of always having a guide in the boat well acquainted with the coast and the situation of its harbors. The severe winds and sudden storms on Lake Superior are proverbial, and it is never considered safe to encamp over night out of a harbor.

This peninsula is the most marked topographical feature of the southern shore of the lake, and is one of the most interesting in its geology and mineralogy. Estimating its length from the bottom of Keewayweno bay, it is about eighty miles long. It is four miles long at its extremity, twenty-five or thirty miles in its middle part, twenty miles at the portage, and between thirty and forty at the base, across from the bottom of the bay. A chain of round-topped rocky mountains, from 500 to 800 feet high, rise near the end of the point, and extend back along its centre to a distance of near forty miles, occupying for this distance nearly the whole breadth of the peninsula, and sometimes coming down at the bottoms of bays till their bases are washed by the lake. Wherever these mountains have been examined they are trap rock, and this is undoubtedly the formation of all of them. Several varieties of trap are seen along the shore, and, in fact, constitute all the rock of the shore from Tobacco river. Basalt, amygdaloid, hornblende, greenstone, and rubblestone are among the varieties. The rock of the extreme point and of the shore for seven or eight miles beyond is a coarse crag. It is composed of pebbles of a dark brown color, showing the same color in their fracture, varying in size from the smallest to more than one foot in diameter, and united by a calcareous cement, which exhibits calcareous spar, in crystals and little veins, in many parts. It does not seem to extend far from the shore towards the mountains, for in many places where it is worn out to form little coves the shore at the bottom of the cove shows only sand and pebbles that have been worn from the main rock. From its exposed situation so far out in the lake, this rock is much subjected to abrasion from ice, &c., and presents to the lake an irregular, ugly, dark-colored surface, generally vertical, and from eight to thirty feet high. Many large portions are detached, and stand out one or two hundred yards in the lake in huge, shapeless masses.

Travelled this day forty-five miles.

June 16.—Left my rough encampment between the crags at half-past four in the morning, in a dense fog, and, coasting along the rock in a direction about west, a mile and a half brought us to the "Little Marais" harbor, where Mr. Johnston had preceded us with his boat and encamped the previous evening, and was now waiting for us to come up with him, under some apprehension that we had met with accident during the night. This harbor is much used by the voyageurs of Lake Superior, and is the first secure one that occurs after leaving Tobacco river. It is a little basin one hundred and fifty yards across, nearly circular, with a low sandy beach all round, excepting on the side next to the lake, where it is separated by the crag rock spoken of, which forms the shore. The entrance is a narrow gap in the rock, and this again is locked and protected from the lake by a long mass of the same, fifteen feet high and twenty or thirty broad, placed directly before the entrance, and extending thirty or forty yards on each side of it, parallel to the main rock, leaving a channel open at both ends, and just broad enough to admit boats without oars. The banks of this harbor are much lower than the rocks in front, and there is a

small marsh a short distance back, hence the name of "Marais" for the harbor. Two miles further brought us to the "Green Rock," a detached block of the crag rock, eight or nine feet high and as many through the base, to which the voyageurs have given this name, from the color it has acquired from copper-green disseminated through it. It is intersected by a vein of calcareous spar, that is also impregnated with the ore, and lies in the water but a few feet from the main rock of the shore, which also presents traces of copper-green and copper-black.*

From the Green rock the shore has a general direction southwest, and the same rock continues five or six miles, intersected by numerous veins of calcareous spar, all running perpendicular to the shore. Some of them were two feet broad, and could be traced up the rock and into the lake as far as we could see. Numerous rocky islands occur along this part a short distance from the main land, some of them bare, and others covered with vegetation. We landed again twelve miles from the Green rock, at some *copper veins*, discovered by Mr. George Johnston last year. The crag rock had disappeared some miles back, and we now struck upon the amygdaloid, which formed the whole shore and the base of mountains that rose gradually back. These veins of copper are four or five in number, very near together, and all run perpendicular to the shore. They can be traced by their color many yards into the water, but they soon disappear on the shore, running under the rock. The largest of the veins is about three inches broad at the surface, but it has been excavated for specimens about two feet in depth, where it is near six inches broad. All the veins are composed alike of the green carbonate of copper and metallic copper mixed. In excavating for specimens in the largest vein I took out pieces of metallic copper of several ounces weight, and the men picked several pieces from the smaller veins that occupied their whole breadth, and projected above the general surface of the rock. It would require much time and labor to make such an examination of these veins as would definitely develop their extent and resources, but the inducements their present appearance offers to such an investigation are certainly very strong and flattering.

The rock here is the amygdaloid variety of trap, and presents all over its surface innumerable little geodes of quartz gems, agate, cornelian, chalcedony, &c. I knocked many from it, and picked up others that were loose on the shore. And near the *veins* I discovered a large agatized cornelian of more than ten pounds weight, embedded in the rock about a foot under the water, but its surface, having been long exposed to the action of the frost and waves, was very much fractured, and in splitting the rock to obtain it was broken into many pieces, most of which rolled into the deep water and were lost. I, however, brought away large geological specimens of the rock, to which much of it is still attached.

After passing four miles more of the same rock I crossed a beautifully curved bay, about nine miles across and six deep, with a sandy beach, and sand-banks sometimes fifty feet high. Leaving the bay, the shore continued regular and less rocky, presenting alternately dark sandy beaches and rocky points, and some little bays, with a beach of white sand and banks of the same. In one of the latter I encamped at sunset, having travelled this day thirty-two miles.

One of the men caught a trout to-day of more than forty pounds weight with a trolling line. These fish may be caught in this way along almost any part of the lake when the boat is sailing.

June 17, (*Sunday*).—The last rocky point of this part of the coast was near our encampment, and on examination proved to be amygdaloid, very compact and hard, resembling massive basalt. It showed on its surface many large crystals of amethystine spar, but with their crystals much injured by attrition, the rock being low, and subject to be washed by the waves. From the same rock I got a few specimens of the smoky quartz crystals, a very rare mineral. From this point our course was across a bay of fifteen miles traverse, with high banks of light yellow sand and a gravel beach, the shore gently curved, and of no great depth from the line of traverse, which was in direction S. 35° W. When we had made about twelve miles across the bay we discovered on the shore the tents of Mr. Schoolcraft and party, denoting the end of the portage where Mr. S. had promised to wait for us on parting three days before in Keewaywenon. This being Sunday, we stopped here for the rest of the day. Mr. S. had come over the portage from Mr. Holiday's house the previous afternoon, and Mr. Johnston, who had left me at the copper veins, had arrived at ten o'clock last night.

We have now made the circuit of this great peninsula of the lake, which is generally the most difficult part of the whole coast. Running out, as it does, to near the middle of the lake, at this part it is greatly exposed to winds and rough seas, inasmuch that boats are frequently detained seven or eight days at the end of the point before they can get a calm and smooth water long enough to get round it.

I have been particular in describing this part of our route, because it is the least known of any part of the lake. Its rocks and minerals are nowhere accurately described, and its topography is falsely represented on all the maps of it that I have seen. The most common error in respect to the latter is the running of the peninsula out too much to the north, and not enough to the east. The true direction of its length is a little (say 4°) east of northeast; and this, as well as I could determine, is also the direction of the chain of hills or mountains that run along its middle. Another error is, the making of two prominent points at the end of the peninsula, and calling one the "East Point" and the other "West Point." These points are not prominent, the shore between them has scarcely any indentation, and, as the line joining them is nearly due north and south, it were fitter to call one end of it North point and the other South point. Such a distinction, however, is not necessary, for the north point is rounded and indeterminate, and the south point is sufficiently protuberant to retain the name of Point Keewaywenon, which is now given to it by the voyageurs and traders, and which is often applied to the whole peninsula.

The mountains run back from the point near thirty miles, but not so far as the portage, which is over level ground, and dry three-fourths of a mile from the swamp to the north end of it, where we are encamped. These mountains show in a few places a bare surface of rock near their summit, but are mostly covered with vegetation, which looks from the lake green, and in some parts tall and heavy; it is principally aspen poplar, *populus tremuloides*, birch, (*betula papyracea*), cedar, and pine. The forest on the portage and about our encampment is very heavy and strong, birch, sugar-maple, large pine, and hemlock, (*pinus canadensis*). The vegetable soil, however, is but two or three inches thick, and rests on white sand, nearly pure, which forbids the idea of profitable cultivation.

* On my return Dr. Houghton and myself put a blast in the main rock at this place, which raised off about two feet thickness of it, and developed a vein of pure copper-black, from which we obtained many specimens of the richest quality, containing no impurity whatever. The vein was about six inches broad, and ran vertically into the rock, increasing in breadth as it descended. It is probable that the vein descends into the trap rock, to which it belongs, and that the crag rock has been formed round it, by the deposition and cementation of its pebbles. The copper-black is one of the richest ores of copper, and this locality of it is worthy of further investigation, which our time would not permit us to make.

The bank of the lake, at our encampment, is sixty feet high, with a beach of pebbles drifted half way up it. There is no harbor here against northern winds, and our boats were unloaded and drawn out on the beach.

June 18.—A strong northwest wind, which made the lake very rough, forbade the embarkation of Mr. S's canoe, and under the prospect of the canoes being detained a considerable time, Doctor Houghton and myself determined to embark in my boat, and run on, with the wind then blowing, to the Ontonagon river, with a view, if the wind still continued, to make a trip to the "Copper Rock," on that river, before Mr. S. could come up, and without detaining the party for that purpose. I accordingly, about noon, loaded my boat and launched her from timbers into a heavy sea, without accident; but I had scarcely got out when the wind lulled to a calm; and Mr. Schoolcraft having embarked his boat and canoe, overtook us in a few hours, and we proceeded to La Rivière à Misère, and encamped 27 miles from the portage. In this distance we passed several bluff points of sandstone rock, from twenty to fifty feet high, with the shore gently curved between them into sandy bays, presenting high banks of fine yellow sand, and rich green forests back. We passed successively the mouths of Salmon Trout, Graverod's, and Elm rivers—distant from the portage nine, fifteen, and twenty-two miles—all small, and much filled with sand at the mouths. Our course was, at first, S. 60° W., but in the latter part curved in gently to S 10° W., forming a gradual indentation, at the bottom of which is the little river of our encampment.

There is a range of hills a mile or two back, parallel to the shore of the lake, the sides of which show forests of pine, birch, and sugar maple; but the country is exceedingly poor in game, and the river has its name, La Rivière à Misère, or Misery river, from the circumstance of traders having greatly suffered here, in former times, from starvation. There has not been a trader here for many years.

The shore, about the mouth of the river, is pure marine sand, with little ridges of pure iron sand—the paper sand of commerce—running near and parallel to the edge of the water. When this sand is washed up by a gentle wave, it arranges itself in little rows or ridges, entirely separate and distinct from the siliceous sand which is held in suspension and brought up by the same wave. This is explained by the difference of specific gravities of the two sands, and the magnetic affinity of the particles of the iron sand. The process of the separation may be witnessed at most of the sandy beaches of Lake Superior, which afford this sand in great quantities. The best time for collecting it is immediately after the waves have subsided, when it may be taken in many places perfectly pure, before wind or other accident has mixed it again with the other sand.

This evening was chilly—42° in the air, and 52° in the water. Fahrenheit.

June 19.—Left the Rivière à Misère at three o'clock in the morning. The sandy shore continued for about twelve miles, and terminated in a perpendicular bank of sandstone, eight or ten feet high, which is the southwest point in the traverse of the great bend of the shore that we had just coasted. Turning this, our direction changed to S 35° W.; the shore was slightly curved, and presented the same bank and beach as the preceding bay, with the same green forest back. We reached the Ontonagon river at eleven o'clock a. m., distant from our encampment twenty-four miles. The bank, for some distance before we reached the river, was very low, and the beach showed more of the iron sand than we had seen at any other part of the lake. The water for the same distance was shoal and turbid and of a dark brown color, which became more deeply tinted as we approached the mouth of the river. The river is about seventy yards broad at its mouth, and nearly on a level with the low banks and plains of barren sand which extend in an area of fifteen or twenty acres on each side of the mouth. It is deep, and has a gentle current, excepting at the very mouth, where it is discharged into the lake, over a shoal sand-bar, in a strong current.

Of all the numerous little streams of the lake, which are not very properly dignified with the name of "rivers," this is the most considerable of the southern shore, to Fond du Lac river; and yet it is only navigable for canoes 38 miles, and in that distance has many difficult rapids. It has been noticed by all the travellers of the lake, from Baron La Hontan's to the present time, for the remarkable mass of native copper found lying on its shore about forty miles from its mouth, and for the supposed mines of copper which this mass seemed to indicate in its vicinity. This mass, or "copper rock," as it has been called, has been so often visited and described, that it has lost a great part of the interest and curiosity which it at first excited; and the many unsuccessful searches for copper mines, in its vicinity, have nearly exploded the theory of their existence, the mass referred to being the only trace of copper that has been discovered on the river. Doctor Houghton and myself were induced to abandon the project of an excursion to the "rock" at this time, as it would have had the effect of detaining the whole party at least two days.*

This river is also interesting, and has been frequently noticed for its sturgeon fishery. A band of Chippewa Indians have made it their principal dependence for subsistence as far back as the observations of travellers have extended, and probably for a much longer time. The Indians now here, and who still subsist principally on these fish, are about seventy-six in number. Their weir or sturgeon dam is in the same place that Henry found it, about seven miles from the mouth of the river, and is built with poles stuck in the mud of the bottom, so close together as to prevent the sturgeon's passing between them, inclined a little down stream, and kept in place at top by transverse poles, to which they are bound with bark, the transverse poles being supported by forked braces, placed below, and inclined up stream. The Indians stand upon supports attached to the weir, and catch the fish with hooks, fastened to long poles, which they move about in the water at the base of the weir till they feel the fish against them, when the fish is hooked up by a sudden jerk of the pole. The weir is placed at the foot of the first rapid, and when the fish are ascending, has an opening made in it to allow them to go up, but which is closed when the fish are descending, and it is at this season that most of them are taken. The water of the river is turbid and of a dark brown color, which prevents fishermen from seeing the fish, or being seen by them. The fish taken here are from two to four feet in length, and are as abundant now as they ever were; and the Indians rely so exclusively on this fishery that they hunt but little and make no effort to cultivate the soil beyond the raising of a few potatoes, which are consumed almost as soon as grown. The river presents narrow alluvial bottoms for some miles up, very rich and favorable for the growing of corn, but they are entirely neglected. When the Indians were asked why they did not raise corn, they replied that they had no seed; but this was only eluding the question, for if they had ever manifested a disposition to cultivate it their trader would soon have supplied the seed, as its successful cultivation there would save him the transportation of a quantity of it from Mackinac for their subsistence and his own.

These Indians looked strong and healthy, but they had a dirty, greasy appearance, and exhaled a fœtid odor, from the oil of the sturgeon. They had their village at the mouth of the river, where Mr.

* On our return, Doctor H. and myself made this trip; for an account of which see my journal from August 13 to August 16.

Schoolcraft held a council with them in his tent soon after our arrival; gave them some tobacco, and had them all vaccinated. He told them, if they would follow him to La Pointe, where he would open some goods, he would give them presents, but they objected to this mode of receiving them, and thought it more consonant with a proper pride and self-respect to have the presents distributed on their own grounds; seeing, however, their objections of no avail, they sacrificed their pride to their expediency, and agreed to send a canoe with us for the promised articles. We also met a chief here from Lac de Flambeau, to whom Mr. Schoolcraft had given a medal last year, who made a speech to Mr. S. in council, and stated, among other things, that he was then on his way to the Saut de Ste. Marie, to deliver himself up to Mr. S. for a murder that had been committed by one of his band on a Frenchman, and to get advice in the matter from the agent; he expressed great regret that the murder had occurred, and represented the difficulty of governing and restraining his young men. He said the other chiefs would not assist him to take the murderer and bring him out, and he was unable to do it alone. Mr. S., in reply, represented that the President would be very angry when he should learn of this murder, and advised that every effort should be made to bring the murderer to the Saut, and give him up to the agent; and for the present his best course would be to return to his band and use his influence and power to secure this murderer and prevent further aggressions.

This chief also consented to follow us to La Pointe to get some presents, and promised to pursue the advice of Mr. Schoolcraft.

The Ontonagon band numbers *twenty warriors*; they are too remote from the frontiers of their tribe to engage in the border warfare of the Chippewas and Sioux, and may be considered as *at peace*. They are supplied by their trader, one of Mr. Holiday's clerks, with blankets, ammunition, &c., and provisions when they hunt. They never get many furs, but had taken more the previous winter than usual; principally otter, martens, muskrats, and beaver. Their principal chief had died a short time before, and was universally regretted. The trading-house stood on an eminence on the east side of the river; the trader had gone with his furs to Keewayweno bay to Mr. Holiday.

From the Ontonagon, our course S. 70° W. traversed a deep indentation of the shore, and struck it again at a distance of 18 miles, after passing the mouth of Iron river, 15 miles from the former. We then coasted in the dark a low rocky shore of sand rock for 12 miles more, and reached the mouth of Carp river at 2 o'clock in the morning, where Mr. S., with his canoe, had preceded the boats in the evening and encamped. I could find no harbor in the dark shore, nor a place among the rocks where the boat would have been an instant secure if a wind should have arisen, and was forced to continue travelling till I reached the encampment of Mr. S. But this is not the first time during the voyage that I have felt the want of a guide in my boat whose knowledge of harbors and distances might save such unnecessary exposures.

Carp river is quite a small stream, barely admitting boats in its rocky mouth, and drains a part of the Porcupine mountains that rise a few miles back. We saw the tops of these mountains before we reached the Ontonagon at a distance of more than 40 miles, when they appeared like a long high point running far out into the lake. On approaching them, however, the appearance of a projecting point was found to be an illusion produced by the lowness of the land between us and them, which prevents its being seen at the same time; by their oblique direction to the shore and our course, and, perhaps, by those nearest the lake being higher than those back, which would have the effect at a distance of making the range seemingly more perpendicular to the shore than it really is. These mountains are near two thousand feet high, and are granite. The sandstone of the shore rises towards them more and more as we approach their bases, and is the same red sandstone that has been noticed on many parts of the coast that we have passed. They come down to the lake a few miles beyond Carp river, and form several miles of the coast, frequently showing a bare surface, but generally covered with a luxuriant, heavy forest, similar to that of the country about their base, which is maple, birch, pine, and aspen poplar. Notwithstanding a detour of three hours at the Ontonagon river we have travelled to-day a distance of 54 miles.

June 20.—Left Carp river at 6 a. m., and in direction of S. 30° W. crossed a little sandy bay, with high banks, to Presque Isle river, a distance of six miles. This is one of the largest rivers of the lake, and has its channel from its mouth in a deep ravine of the Porcupine mountains, which here rise immediately from the lake. I went up the river a mile to see two perpendicular falls that occur in this distance; the first, half a mile from the mouth, is 20 feet, and the other, about half a mile further, is 40 feet. The ravine is very deep and narrow, and the sides of it are so thickly covered with a vegetation of large and small trees and bushes that I could not without difficulty find a point on the acclivity below the greater fall from which I could get a distinct view of it; it is exceedingly picturesque; the stream above is much contracted between high ledges of rock and seems to issue out of the mountains; from which, after running a few feet, it is pitched from a shelving sandstone rock into a deep abyss; the water is there deep, and the current gentle for about one hundred yards below, when it is urged with great violence over successive broken ledges of the same rock, until it reaches the next fall of twenty feet; from which it continues in a rapid current over broken rocks almost to its mouth. The quantity of water discharged over these falls is as great as that of the Trenton Falls, in New York, and the scenery is equally beautiful and interesting. Between the two falls the river has another channel to the east, now dry, but which discharges a portion of its waters, in time of floods, by another mouth; and hence the name "Presque Isle river."

Six miles from this river is Black river, a small stream that drains the south side of the Porcupine mountains. We passed this river two or three miles to the left of our course, (S. 60° W.), and struck the shore at a distance of ten or twelve miles from Presque Isle river, where the sandstone rock is again seen, seven or eight feet above the surface of the water, and inclined up towards the mountains at angles of 30 or 40 degrees; a bank of sand rests on it, and in a few miles the rock disappears entirely, and the sand bank, attaining an elevation of 80 or 90 feet, encloses the Montreal bay, at the bottom of which is Montreal river, twenty-one miles from Black river. We left the shore at the eastern cape of this bay, and made a traverse of twenty-one or twenty-two miles in a direction due west to the island of La Pointe; thus leaving Montreal river and Mauvaise river of the same bay very far to the left. Montreal river is one of the largest of the lake, but, from its numerous falls and rapids, its navigation is not practicable, excepting near its source; and the route of the traders of Lac du Flambeau, up this river, starts from its mouth; in a portage of near 50 miles, 120 pauses. Seven or eight hundred yards from its mouth it has a perpendicular fall of 14 feet, below which the Indians have a sturgeon weir, like that at the Ontonagon.

Twelve miles further round the bay is Mauvaise river, navigable for canoes 100 miles, which formed a part of Mr. Schoolcraft's route last year.

We reached La Pointe island at 10 o'clock at night, having travelled to-day a distance of 54 miles by the shore, but which was much shortened by our great traverse of Montreal bay.

June 21.—Mr. Schoolcraft having some business to transact with the Indians of this place, and those that followed us from the Ontonagon, we did not leave until the afternoon. The island of La Pointe, on which we encamped, is the first and largest of a group of about twenty others, which extend about thirty miles farther towards Pond du Lac, and nearly lock the coast for this distance, lying at distances between one and five miles from the main land. This island has some three or four names on the maps; as Montreal, St. Michael's, Middle island, &c., but is called the "Island of La Pointe" by all the traders and voyageurs, and any change from this name would only lead to confusion, and is improper; the name is taken from La Pointe Chegoimegon, a long point that runs out from the main land from the south to within about a mile of the island, the name of which is abbreviated, and called "La Pointe." Point Chegoimegon separates Chegoimegon bay from Montreal bay, which we crossed to reach the island; the former being a bay of 10 or 12 miles depth, and lying south of the island.

This island was in former times a place of rendezvous for the Chippewa tribe, where they held great councils on matters which concerned the whole nation. It was also the residence of a large and powerful band. But a change of national policy, by which the several bands act less in concert, and a general impoverishment of the country in their peculiar means of subsistence, has destroyed its importance as a place of general council, and reduced its particular band to about one hundred and eighty-four souls, who are dispersed about the bays and islands in the vicinity, and subsist almost entirely on fish, excepting at the time of their winter hunts, when their trader furnishes them with corn and flour. They take sturgeon from Montreal river, and small fish from this and Mauvaise river, and whitefish and trout from the lake, which latter they take in gill-nets. They have at present between thirty and forty warriors, and are *at peace*; the Sioux, their natural enemies, being too remote for their excursions. They are supplied with all the articles of Indian trade by American traders, who also get all their furs.

Their present trader is Mr. Warren, a gentleman of the American Fur Company, who makes this his residence, and the headquarters of an extensive department and district, embracing the extent of country southwest of La Pointe, between Snake and St. Croix rivers and Lac Courte Oseille and Chippewa river. The value of his trade annually is as follows: At the post of La Pointe, \$2,000, or 250 beaver skins, 500 martens, 50 bears, 1,000 to 1,500 rats, and 20 or 30 otters, all of excellent quality. At the posts on the St. Croix, \$4,000, principally rats, bears, and otters, with a few martens, raccoons, deer skins, foxes, fishers, and beaver. At Snake river post, \$1,000; same furs as at St. Croix river. At Lac Courte Oseille and Lac Chetac, \$1,500, principally bears, otter, martens, rats, fishers, and minks. At Chippewa river and Lac Vassale, \$2,500; same furs as the last, but more beaver. The furs of Chippewa river and Lac Courte Oseille are of a better quality than those further towards the Mississippi, as of the St. Croix and Snake rivers. The whole seven posts under Mr. Warren yield annually about eleven thousand dollars worth of furs; but each post requires a clerk and some men, and consequent expense, inasmuch that the trade is by no means as profitable as it would at first seem to be.

The Indians of this department, excepting those about Lake Superior, subsist chiefly on wild rice and game, such as deer, bears, &c., and generally also supply their particular trader with these articles of provisions.

Mr. Warren has lived for a number of years at his present residence on the island of La Pointe, and has given to this little spot an appearance of civilization. He has built a large, comfortable dwelling, a storehouse, and eight or ten outhouses, which, with the houses of a Mr. Cadotte and family, and those of the sub-agent, formerly at La Pointe, make almost a village. All the buildings are handsomely situated on a rise of ground about two hundred yards from the lake, and immediately back of them are cultivated and enclosed fields, in which oats, peas, beans, potatoes, &c., were growing finely. Wheat would grow here, but the want of means to make it into flour prevents its cultivation. The season is too short and the soil too light to grow corn with any success. The soil of the island is nearly as good as any that I have seen on the lake, but it is light and sandy, and would be thought poor land in Ohio or Indiana. It, however, produces a good luxuriant grass, (*genus alopecurus*,) which, I observed, Mr. Warren had appropriated in the raising of horses and cows. The timber is sugar-maple, birch, and pine.

There was a mission established on the island last summer by the Presbyterian Board of Foreign Missions, and Mr. Hall, the minister then sent out, was here now with his lady. The plan and object of this mission is to convert the Indians to the doctrines of Christianity, by preaching; and to teach a school for their children, at which the latter are to be clothed and subsisted and educated at the expense of the Mission Board and other charities. It is purposed to teach them the rudiments of the English language, and to read and write in their own.

Mr. Hall's progress, however, in the accomplishment of these benevolent ends has not hitherto been very flattering. The Indians have manifested rather an aversion for his doctrines, and a disposition not to listen to his advice. All that lived on the island left it soon after he arrived, and they had learned his motives; and a fear for their own peculiar institutions, or some other cause, still keeps them in a great measure aloof from him. They refuse to come to church or to attend divine worship, and the only direct means now left him of operating on their minds to his purpose is to visit them at their villages and in their lodges, where, by making their hospitality subservient, he is kindly received, and listened to with seeming attention, but still with little or no apparent effect; none of the Indians having as yet shown any willingness to embrace his doctrines, excepting one Indian man, who has been for some time laboring under a severe disease of the lungs. Mr. Hall is not, however, discouraged, but hopes, by means of his school and other efforts, to effect many beneficial results. His school at present contains twelve scholars, all quite young and mostly half-breeds; the Indians having shown also an unwillingness to give him their children to instruct.

This mission at La Pointe, and Mr. Bingham's at Saut de Ste. Marie, are the only missions that I know of in the Chippewa country. The former has been established several years. The means and efforts at each have been similar, and alike unproductive. And until more successful methods can be adopted by both to accomplish the benevolent designs of those contributing to their support, the propriety of sustaining them at such great expense may well be questioned.

These northern Indians are generally wild, untamed, and unsubdued; they have none of the arts, institutions, or manners of the whites; and their prejudices in favor of their own peculiar habits and institutions, which have descended to them from their forefathers, are engrained and rooted in their very nature, inasmuch that their removal, by the ordinary means of teaching, preaching, and advice, is rather a speculative theory than a result that experience teaches us to expect. The good and humane motives

of the missionaries to these Indians cannot be doubted, but the propriety and efficacy of their *method* of proceeding in their work of conversion may be fairly judged of and estimated by the effects actually produced; and these, so far as my observation and experience extend, are by no means proportionate to the expense and labor employed.

The present condition of most of the Chippewa Indians is deplorable. They are mostly very poor. Their country is becoming every day more exhausted of the means of subsistence hitherto used, and they are making no preparations to provide any others. Something seems necessary to be done by humanity, to prepare them for the approaching condition of their country, and to protect them from its threatened calamities. The first thing that a view of their actual condition suggests is to teach them to *cultivate the soil*, and obtain in this way a *subsistence*, which their impoverished woods and forests must very soon refuse to their increased population. This would lead them gradually from their wild pursuits and precarious mode of living, and lay the foundation for the adoption of other customs of civilized life, and among them perhaps Christianity. The Indians cannot be induced to make a change in their habits and manners unless the advantage be immediate and tangible, and is made evident to their senses. Their prejudices in favor of their own way of thinking and acting are too strong to be easily eradicated; and to expect to effect an entire change of their opinions and habits by appeals to their understanding, in the manner of preaching Christianity, is to expect more than a knowledge of Indian character will justify. And as long as the missionaries pursue their present method with the Chippewa Indians, so long will their exertions be, in a measure, useless; and until an entirely new system is adopted and pursued no extensive or permanent change in this people need be expected.

Near the present mission on the island of La Pointe are the traces of an old missionary establishment, occupied by the Jesuit missionaries at a very early period of the settlement of Canada. Very few vestiges of the principles there taught, however, are now to be discovered in the manners or characters of the Indians at present in the vicinity.

Mr. Hall has not yet constructed any buildings for his establishment, but at present occupies houses of Mr. Warren for a school and dwelling. Notwithstanding their remote situation, he and Mrs. Hall seem contented, cheerful, and happy; although, with regard to Mrs. Hall, there is not a single white woman or female that speaks her language within hundreds of miles of her. Mr. Boutwell, the reverend gentleman who is travelling with us, is to stop and remain with this mission on our return.

We left the island at 6 o'clock p. m. The channel between the island and the main land to the west is from three to five miles broad. Our course through it was due north to a point of the main land ten miles ahead, where the shore begins to bend off to the northwest. But seeing that I could not reach the main land before dark, I turned a little to the east of the proper course, and encamped on a small island about eight miles from La Pointe. Mr. Schoolcraft, with the other boat, crossed the channel, and encamped on the main land. The island of my encampment is called Spirit island, and is held in sacred veneration by the Indians, inasmuch that they never hunt or encamp on it. It is about two miles long; its banks rise steeply from the lake, and it is covered all over with a thick, heavy forest of yellow pine. Dr. Houghton, who had gone in the morning in Mr. Schoolcraft's canoe to vaccinate the Indians of a village at the bottom of Chegoimegon bay, overtook me about 11 o'clock at night, and went on to Mr. S.

June 22.—Left our encampment at 3 o'clock a. m., and in about six miles came up with Mr. Schoolcraft and party, encamped in a sandy bay that they had reached the night before. In a few miles more we passed all of the group of islands, called sometimes the Twelve Apostles. They are beautifully situated with respect to each other, are all high, and covered with a luxuriant growth of vegetation, and form the most interesting feature of this part of the lake. Twenty-five miles from La Pointe we passed a rocky bluff point of sandstone rock, called the Detour, from which the Great Fond du Lac bay may be considered as commencing. Our course here changed to south 80° west, and we could see distinctly the mountains on the opposite side of the bay and lake. Here we met a Mackinac boat, with Mr. Abbott, a trader from Leech lake, who said the returns from that quarter were principally bears this year; and that the Leech Lake Indians had lately gone on a war excursion against the Sioux. At 1 o'clock passed Birch Bark point, a flat, prominent point, that is midway between La Pointe and Fond du Lac river, and hence frequently called Middle point. It has steep, sandy banks, ten or fifteen feet high, resting on sand rock, and is covered with a small growth of birch, aspen, and some large dead timber. The whole shore to-day is much serrated, forming deep, sandy bays, with regularly curved shores and high banks of sand. The prominent points showed mostly an imperfect red sandstone, sometimes in perpendicular bluffs twenty or thirty feet high. High hills are seen to the left, but the forest does not present the rich verdure of the mountains round La Pointe, and of the lake generally. Our course from Birch Bark point was south 60° west, and we encamped at sunset, on a beach of dark sandstone gravel, having come to-day fifty-eight miles. Mr. Schoolcraft and party encamped ahead. We passed to-day Raspberry river, Cranberry creek, and Sandy river.

June 23.—Following a plain shore about three miles, I came to an Indian village at the mouth of Bois Brulé river, where Mr. Schoolcraft had encamped the previous evening. From this river the shore is sandy, very regular, and falls off to the south, but our course to Fond du Lac river was more to the west, and left the shore many miles. The beach and bank round the end of the bay are very low and flat, and the entrance to Fond du Lac river is not discernible a short distance from the shore. I was near missing the entrance by being in some degree guided by Farmer's map of Michigan, on which this bay and the entrance, like most of the coast, are very inaccurately delineated. I had approached very near and was sailing past it, when Mr. Schoolcraft, who was there waiting for me, attracted me to it by making signals with flags. We entered the river about 10 o'clock a. m., having come from our encampment of last night twenty-four miles; and, exposed as we have been on the lake for the last sixteen days, we were glad to leave it. My boat being slower than the other, and both slower than Mr. Schoolcraft's canoe, the whole party had seldom travelled together, and as in my boat I had no guide, or even a map of the coast that I could depend on, I was often, in the course of the trip, exposed to danger and inconvenience. The difficulties of travelling in the night, after I had once or twice experienced them, determined me to encamp alone rather than attempt to overtake Mr. Schoolcraft after dark; and I have accordingly been several nights separated from the rest of the party. There is very little danger in coasting the south of Lake Superior in boats if there is a person to guide who is well acquainted with the shore, and particularly the position and distances of the harbors. The harbors for boats are numerous and good, and notwithstanding the suddenness of the rising of storms on the lake, it is easy for a person acquainted with the coast to make a harbor before the lake gets too rough for a good boat. An accurate map or chart of the coast would also subserve an excellent purpose to avoid accidents and inconvenience, but none such has yet been made. The one I have with

me (Farmer's) is perhaps the most so of any yet published, but is far from being a proper guide, and it would be dangerous to depend on it for anything like an accurate delineation of the shore or the relative positions of the numerous bays, that must be known to enable one to travel in security and safety. The heavy fogs of the lake are great annoyances to the voyageur; they are frequently so thick and heavy as to obscure all objects at a distance of twenty or thirty yards, and in such cases compel the traveller to hug closely all the sinuosities of the shore, which are so numerous, deep, and irregular as to make the distance more than twice what it would be to cross from point to point. I have often, in a fog, run to all points of the compass in less than an hour, and have sometimes, on the clearing up, found myself so far in a deep bay, that I had twice as far to row to get out of it as the distance across it. The fogs, too, are often brought up by a wind so suddenly as to leave a boat in the traverse of a bay, far from land, and without any point to direct the steering. In such cases, if the boat has a compass, the proper direction may be preserved; but without one, there is danger of going out into the lake. The remedy, then, of the practised voyageur is to observe the direction of the wind that brings the fog with respect to the land, and to steer accordingly; and it is remarkable, that scarcely any of the traders' boats carry a compass, when the inconvenience and danger often resulting from such neglect must be experienced on every trip.

The mouth of the Fond du Lac river, or "The Entrance," as it is called by the traders and voyageurs, is about eighty feet broad, but is shallow, and would not admit a vessel of three or four feet draught. It expands immediately into two bays, to the right and left, separated from each other by a small island near and directly in front of the entrance. The mouth seems to be in the very end of the lake, and hence it is properly called *Fond du Lac river*. A river that enters the left bay The Entrance is also as aptly called "*La Rivière à Gauche*." The bays to the right and left lie in their length parallel to the shores of the lake, from which they are only separated by low sandy tongues of land, very much attenuated, and sustaining a few little scattering pines. The point to the right, entering, is near fifty yards broad near the end, but it afterwards narrows, and runs back for about two miles with a breadth of from twenty to forty yards. Our course was through the right hand bay, N. 60° W. for four miles, to a strait one hundred yards broad, by which, in a distance of two hundred yards, we entered another bay, long and narrow, and which contracted gradually to the very narrow, crooked channel of the river.

There was formerly a trading house near the entrance, but it has been abandoned and destroyed, and the present house for all the Fond du Lac country is twenty miles above.

The river for this distance is very crooked and winding, but its general course up is southwest; the channel is of variable breadth and generally deep; the shore is irregular, and presents alternately on either hand marshes, bluff sand banks, and hills, and is cut up by numerous channels or "pockets" from ten to one hundred yards broad, which run out straight and generally perpendicular to the river, frequently extending as far inland as we could see. These are separated by long tongues or promontories, of semi-cylindrical shape, rounded on either side up to the summit, fifty or sixty feet, and covered with a thick growth of small trees, aspen, birch, tamarack, (*pinus pendulus*), and other species of pine. Several of these singular promontories occur in many places in succession, parallel to each other, with channels between, and present a formation and appearance altogether peculiar.

We arrived at the trading house at 4 o'clock p. m. The river is here penetrating a chain of mountains, is more regular in its course, and has its channel more confined. The trading house is situated at the base of the mountain, on a narrow piece of bottom three or four hundred yards broad, which is rich, and excepting the gardens, where the trader raises abundance of potatoes, is covered with a very tall, green, luxuriant grass, principally *poa compressa*. We met here Mr. Aitkin, the chief of the department of the country beyond Fond du Lac, and all his clerks, to the number of fifteen or twenty, and their engagés, all just ready to start for Mackinac on their regular summer trip.

This is called the "Fond du Lac Post," and was formerly the headquarters of an extensive district, called "The Fond du Lac Department." The department is still the same, but Mr. Aitkin, of the American Fur Company, the principal of it, has removed his headquarters to the Mississippi, at Sandy lake, which is more central in respect to his several subordinate posts.—(See my map.) This is still, however, a place of rendezvous for all his clerks, preparatory to their embarking in boats with their annual stock of furs for Mackinac. Here, too, on their return in the fall, a partial distribution of the goods is made; the boats are left, and the navigation in all directions begins *in bark canoes*. The buildings here consist of a dwelling, three or four stores, a large house for the accommodation of the clerks, and some other buildings for the engagés or Frenchmen. They are handsomely situated on the bank of the river, and directly in front is an island, of about two miles circuit, of very rich soil, and a forest of large elms, and on which the Indians now assembled have their lodges.

Mr. Aitkin very politely gave me the following information in relation to his trade, the Indians, &c. His department embraces an extent of country from Fond du Lac north to the boundary line, west to Red river, and south to near the Falls of St. Anthony, on the Mississippi, and contains nine permanent posts, from which returns are made every year, viz: Fond du Lac, Lake Superior, on the north side; at Grand Portage; Rainy lake; Vermilion lake, at the head of Fond du Lac river; Red lake; Pembina settlement, on Red river; Red Cedar lake; Leech lake, and Sandy lake, Mr. Aitkin's residence. For facilities of the trade there are several other smaller posts, as at Lake Winnipeg, Lake Travers, mouth of Crow-Wing river, and others; but these are subordinate, severally, to some one of the larger posts named, which is considered as making the whole "return" for its particular district.

Mr. Aitkin's returns of this year are less than usual, and are as follows: from Fond du Lac post, \$2,000; Grand Portage, \$1,000; Rainy lake, \$4,000; Vermilion lake, \$2,000; Red lake, \$2,000; Pembina, \$2,500; Red Cedar lake, \$1,500; Leech lake, \$5,000, and Sandy lake, \$5,000. The furs from all the posts are of nearly the same kind, and principally martens, muskrats, beaver, otter, foxes, and bears; the proportion of bear skins this year being very great at most of the posts west of Fond du Lac. The whole value of his furs is \$25,000, and his expenses in procuring them have been \$31,000, leaving a balance against the trade of \$6,000.

The trade of this department is perhaps more precarious than that of any other district of the American Fur Company to the north. Here the country, and, consequently, the "hunts," are most affected by dry and wet seasons, and here the British trader comes in direct competition with the American. All along the lines—at Grand Portage, Rainy lake, Lake of the Woods, and Pembina—the British traders get the greater part of the furs of the American Indians; and it is represented that even in the interior as far as Leech lake, Winnipeg lake, Red lake, and Vermilion lake, they secure a great part of the trade by inducing the Indians to carry their furs to them across the line. This is done by paying more for them than American traders can afford to pay; by a free use of whiskey, which is a most potent article in Indian

trade, and which is prohibited to American traders, except in small quantities at a few frontier posts; and by a skilful fostering and management of a strong feeling of attachment which all the Indians of this district are represented to entertain for the British government and the Hudson Bay Company.

The Indians at Fond du Lac, Grand Portage, Vermilion lake, and Sandy lake are chiefly subsisted by the traders. At the other posts of this department they have abundance of fish and large animals of the forest, and live comfortably. At Red lake they sell great quantities of corn to their trader, which is sent off to other posts.

The population of the Fond du Lac band is 193, of whom about 45 are warriors. They are, however, at peace, as they are too far from the Sioux to go against them. Their country is very poor in all animals for food, and their particular trader furnishes most of their living; the rest they get from the fish of the lake—whitefish and trout—which they take in gill nets, and from the few furred animals they kill. Since the strppage of whisky in the trade they are increasing very rapidly, there being more children born and fewer deaths among them from neglect of drunken mothers. They are miserably poor; and although their country is in a measure exhausted, and must soon refuse a supply to their increasing wants, they have not reflection, or foresight, or providence enough to save themselves from starvation by cultivating the soil, which in many parts is rich, and would, with little labor, afford them abundance.

There are about 150 Indians encamped on the island here at present; some of them belong to Sandy lake, and some came with us from Bois Brulé river. Among the latter is an Indian of some distinction, *Yellow Head*, from Red Cedar lake, who was on his way to visit the agent at Fort Brady, but is now returning with us.

The Indians of other posts of Mr. Aitkin's department through which we are to pass will be more particularly spoken of when we reach them. This being Sunday, Mr. Bontwell preached to the Indians through the interpreter.

June 25.—The Indians assembled early in the morning, and regaled us with their usual dance, after which Mr. Schoolcraft held a council and talk with them, and distributed a few presents. Mr. Aitkin embarked all his furs in seven large Mackinac boats, all well manned, and each under the command of a clerk, and started them down the lake. Many of his Frenchmen have Indian wives and families, who are left here till they return.

Mr. Schoolcraft made an arrangement with Mr. Aitkin for bark canoes for the transportation of our whole party above, which we will receive at the head of the Portage, and, as my men are entirely ignorant of their management, he has employed three Indians to go with me to Sandy lake. We embarked in our boats and ascended the river over several rapids two miles further to the foot of the grand portage of Fond du Lac river, the head of boat navigation. From here Mr. S. sent his boat back to the Saut by Canadians, whom he had brought along for the purpose, and I employed an Indian to take mine back to the mouth of the Bois Brulé river, where we purpose to strike the lake again returning. Here a new scene commenced. Our baggage and provisions for sixty days were to be transported by carrying over a rough portage of nine miles. This was a familiar business with Mr. Schoolcraft's Canadians, but entirely new to the soldiers, the manner of the carrying being altogether different from anything they had ever experienced. For this purpose the pork had previously been put up in kegs, containing about 75 pounds each, and the flour in bags of about 80 pounds. The mode of carrying is by a leather strap called a "portage collar," composed of a broad piece that is applied to the forehead and two long tags which attach to the piece to be carried. "A load" for a Frenchman consists of two "pieces," when the pieces are of convenient shape, as a keg of pork and a bag of flour, (from 160 to 200 pounds.) The first to which the portage-collar is fastened, is adjusted to rest on the lumbar vertebrae, or small of the back; and the second, when practicable, as in case of the bag, is placed longitudinally, one end resting on the keg and the other along the back of the head, so that when the body is stooped, in the manner of carrying, the weight of the bag is between the shoulders, near the back of the neck; the second piece is also frequently placed transversely on the shoulders, but always, if practicable, in such a manner as to rest its weight very far up towards the neck; when the load is not so adjusted as to sustain the head against the force of the portage-collar to draw it back, it is supported by the hands clasped behind it.

The experience of traders, and observation of the manner of the Indians, have proved this to be the most convenient way of carrying in this country. It is accordingly practiced by all; and everything to be transported over portages is put up with a view to this method of the portage collar. All the portage roads, too, are selected with the same view.

The portage was commenced by ascending a hill 100 feet high, with an acclivity of about 45°. No pains have ever been bestowed to make a road up it; and the ascent is by means of little imperfect steps, just large enough for the toes, that wind up the hill without any regularity as to direction or relative position. The Frenchmen commenced with full loads, but the soldiers, excepting one or two, were permitted to carry only half loads, or one piece, and even this was found to be more than some of them were equal to. One of them, a very strong man, fell on the hill with a keg of pork, and was disabled.*

The portage road, after the hill, was rough, narrow, and crooked—a mere uncut path through bad woods, but we got over three pauses, or a mile and a half of it, and encamped on the bank of the river, at a place called the "Roche Galet," from the flat sandstone rock over which the river here runs. A number of Indians followed us from Fond du Lac house, and encamped with us.

June 26.—We commenced carrying at four o'clock in the morning, and continued it until near sunset, or eight o'clock in the afternoon, and passed over twelve pauses, of near half a mile each. The portage road continued a little, narrow, crooked path, with bushes crowding it on either side, winding round trees, through marshes, over ridges, and across ravines, and presenting all the irregularities and inconveniences of a rude trail through difficult woods. There has been little or no cutting to clear it out, and all the bridging consists of a few small poles, laid in the length of the path, which serve rather to annoy, than to assist the passenger. No idea can be formed of the difficulty of this portage without witnessing it. The men, with heavy loads, are sometimes forced to wade through a swamp of half a mile, full of roots and bushes, and over their knees in mire at every step. And where the road is dry, it is generally over a hill, or across a gully, the steep banks of which are worse to pass than the swamps.

When we stopped at night, my men, and even the Canadians, were literally fagged out. Two of the soldiers had snagged their feet, and were disabled, and all of them were galled in the back by the kegs in such a degree as to make their loads very painful; and yet they have carried only half loads all the

* This man, Beemis, was kept in hospital more than a year after his return, in consequence of this fall, and was subsequently discharged at Fort Dearborn on a surgeon's certificate of disability.

day; whereas the Frenchmen and some of the Indians have carried full loads each time. It requires an experience of years to habituate men to carrying in this way; and the life and habits of soldiers by no means fit them for such labor.

I had four or five Indian women and as many Indian men carrying for me, and without these I would not have made half the distance. The Indian women carry better than the men, being less indolent, and more accustomed to it. I saw a small young Indian woman, at the close of the day, carry a keg of one thousand musket ball-cartridges for a distance of one mile without resting, and most of the distance through swamp that was frequently over her knees; this, too, after having carried heavy loads all day, and when, with less exertion than she had made, my strongest men were exhausted.

We encamped on the portage near a creek, which enabled us to wash off a little of the mud of the swamps which we had carried with us all the day. Doctor Houghton had many cases of strains, bruises, and snagged feet this evening.

June 27.—Owing to the excessive fatigues of yesterday we did not recommence the carrying till six o'clock, though the sun rose at four. We had four regular pauses to make yet to the end of the portage, which, for greater ease, were divided into six; there was more mud and mire on the three first than on those of yesterday; the last only was dry and good. We accomplished the whole, and arrived at the end of the portage by twelve o'clock, where we encamped, and employed the rest of the day in getting out our canoes, and making arrangements to travel in them.

The general direction of this portage has been a little west of northwest; leaving the river in some parts four or five miles, and touching it but once, at La Roche Galet, from the commencement. It is on the north side of the river, and the land about it is rich, excepting the swamps. In some places we passed groves of sugar-maple, but the general growth is birch and pine; some of the latter being very large and beautiful, measuring eighteen feet in circumference at the base. The length of the portage is nine miles, which is divided into nineteen pauses; the term "pause" being applied to the distance between two resting-places, and hence the *pause* is the unit of measure for all portages. We have passed by in this distance many rapids and falls of the river, and a perpendicular fall, said to be thirty feet. The river is still rapid at the head of the portage, and shows in its banks and bed a coarse, hard, argillite rock, in place.

June 28.—The necessary arrangements for travelling in our *bark canoes* having been completed the previous evening, we embarked in them at seven in the morning. I have two canoes, in which I have distributed equally my men and their provisions and baggage, with two Indians in one, in the bow and stern, and one Indian in the other, in which I go myself.

The river for three miles, to Portage à Couteaux, is a series of difficult rapids; and my men, totally unaccustomed to canoes, had great difficulty in ascending them, being obliged for this purpose to wade in the rapids, and drag or push them along. The river, in this distance, runs over argillite rock, which rises on both sides of the channel, with strata nearly vertical, in high broken and precipitous banks, presenting a scenery altogether peculiar to this kind of rock. The Portage à Couteaux, or Knife Portage, commences on the west side of the river, at the foot of a rapid too strong to be ascended in canoes, and in which the channel of the river is divided by a small island of the argillite, rising abruptly to a height of about 100 feet from a base of but little greater diameter; which, piled up as it is in the utmost confusion and irregularity, with many small cedars and pines, that have taken feeble tenure between the vertical strata of the rock projecting from its rugged sides in all directions, is remarkable and picturesque.

The portage begins by a steep ascent of the argillite rock, which is seen bare along the greater part of the path, making it broken and difficult, but being dry nearly all the way it is much preferable to any part of the grand portage below. It is but three pauses, or a mile and a half, in length, and has been aptly called "Portage à Couteaux," from the knife-like effect of the slates on the shoes and moccasins of the voyageurs. It runs along a ridge, and the land on each side is low, swampy, and good for nothing.

The rapids were strong for two or three miles above the portage and filled with boulders of hornblende rock which made their ascent by the method of wading very difficult, the men frequently slipping from the rocks and plunging over their heads in the water, in great danger of drowning, but much to the amusement of my Indian guides. After the rapids was a broad, smooth river of gentle current and banks of the richest soil, supporting a fine growth of maple, elm, ash, poplar, &c., which denoted the rich character of the country. The Indians gave us to understand that this kind of land extended some distance back and was a bear hunting ground.

We encamped this night nine and a half miles from Portage à Couteaux at the foot of another series rapids, having travelled this day about thirteen miles.

June 29.—Started at half-past four in the morning and continued in rapids through argillite rock again for about four miles, which occupied us until eleven o'clock. Mr. Schoolcraft and party got ahead of me very fast, as they were always enabled to do in rapids, by the superior skill of their Canadian voyageurs, who could stand up in the canoes and pole them along, whereas I, for fear of upsetting, could not allow my men to attempt this method, but continued the comparatively slow and secure one that I at first adopted. My canoes, too, were frequently broken by the awkwardness of the men allowing them to drive against the rocks, and delay was thus occasioned in making repairs.

From the narrow rocky channel and steep broken banks of the rapids the river suddenly expanded to three or four hundred yards breadth, with a gentle current, the rocks entirely disappeared, the banks were twelve or fourteen feet high, and exhibited a character, as to soil and timber, similar to that of the smooth part of the river passed yesterday, and not unlike that of some of the western rivers with their extensive rich bottoms and heavy native forests. It is probable, however, that this land is swampy back, as indicated by the swarms of mosquitos that infested us.

Mr. Schoolcraft and party kept ahead and I encamped alone, having come about 35 miles.

June 30.—Passed several rapids and a country much the same as yesterday, (23 miles,) until we reached the mouth of East Savannah river, where our route left Fond du Lac river. Mr. Schoolcraft had encamped here the previous night, but had gone on without waiting for me.

The East Savannah river is a little, narrow, and very crooked stream, having its source in wet meadows and swamps about 30 miles from its mouth, and running in a general direction northeast, in a very direct line, from Fond du Lac river to Sault lake, on the Mississippi, where we are going; we accordingly ascended it twenty-four miles to the Savannah Portage. The country at first was low and rich, afterwards more elevated and some pine ridges, and the last ten or twelve miles was through a wet savanna, from a half to two and three miles broad, bordered by tamarack and cedar swamps. The river was from ten to thirty feet broad and very crooked all the way, but particularly so through the savanna,

where canoes might be a mile or more apart in the actual length of the river, and only a few yards in a direct line. The channel was generally seven or eight feet deep, and part of the savanna was so much overflowed that canoes could pass over it through the grass. About a mile below the portage the river forks, and the channel, though still deep, is so very narrow and crooked that canoes can scarcely turn the shorter bends. The meadow here is dry, and is grown over with a most beautiful, luxuriant, and heavy growth of grass—a species of *carex*, or sedge. I landed at the portage near the end of this meadow at 6 p. m., where I found, by a note left for me by Doctor Houghton, that Mr. Schoolcraft, having preceded me about six hours, had gone through four pauses of the portage to encamp. I got part of the baggage through the first pause, and encamped where we landed, in an atmosphere of mosquitos. Journey this day 47 miles.

July 1, (Sunday).—It rained constantly and in torrents, without a prospect of cessation, but the unpleasant situation of our encampment and my anxiety to overtake Mr. Schoolcraft, who I knew would not travel to-day, determined me to proceed. At the end of the first pause, which was a perfect mud hole throughout, the swamp had water enough to float our loaded canoes, and we accordingly embarked them in a little canal or channel which had been slightly worn through the swamp by the travelling of the traders, and in which the mud was thin enough to allow the canoes, loaded only with our baggage, to be dragged along without much difficulty, more than that of wading through the mire. But this was at every step over the knees, and in many places up to the waist. We worked our canoes and baggage in this way through two pauses, or about a mile, as far as we could, and carried the canoes and baggage one pause further, the greater part of which was a continuation of the swamp, to Mr. Schoolcraft's encampment, on a dry ridge. It rained on us all the way, and my men were much exhausted from the difficulty of transporting the baggage in the manner described.

July 2.—The ridge of high land on which we were encamped was but little elevated above the swamps, but was rich and dry, sustaining a heavy forest of sugar-maple, birch, and linn. It is the dividing ridge of the waters of Lake Superior and the Mississippi. We crossed it in a southwest direction, perpendicular to its general range, but it was not broad, and in less than half a mile from our encampment we met with deep, ugly swamps, almost as troublesome as that we had passed yesterday. We had four miles of the portage before us this morning, and Mr. Schoolcraft made great efforts to accomplish the whole of it this day; and my men, in emulation of his voyageurs to travel at the same rate, completely exhausted themselves long before night. The route was of the worst character, being mostly through swamp of tough, deep mud, which it was difficult to walk through unencumbered, and that could scarcely be deemed practicable with the loads that the men were obliged to carry. They frequently stuck fast in the mud until they abandoned their load, or were assisted out, and before night some of my best and strongest men fell down by the roadside unable to proceed further. I collected them and the baggage on a dry spot half a mile from the end of the portage, and encamped before sunset. Mr. Schoolcraft had his tents taken entirely through, and encamped on the bank of the West Savannah river; his men encamped back with mine. Our journey to-day was three and a half miles, and much the most fatiguing of all our journey since we left home.

July 3.—Although it was late in the morning when the men were required to resume the carrying, they still showed, by a tardy, sluggish manner, that they were poorly recovered from the great fatigues of yesterday. We, however, got through the remaining pause of this horrible portage by twelve o'clock, and embarked in the West Savannah river, near its source, where it was but a few feet broad, and with only water enough to float our canoes.

The Savannah portage that we had now crossed is six miles in length; the first two through a swamp such as I have described, and the remaining four over land more elevated, and some little hills and ridges, but with deep, ugly swamps intervening, making this much the most troublesome and difficult of any part of our route. The highest point crossed by the portage is about one hundred and fifty feet above the Savannah rivers.

From the place of our embarkation to Sandy lake was eighteen miles. The river in this distance has a devious course through narrow, low meadows, of a little valley between pine hills. Its direction is about 20° west of south, and about a mile from Sandy lake it receives a small river from the east, after which it is thirty yards broad. We passed through the length of Sandy lake, which is about five miles, and descended its outlet, or Sandy Lake river, a mile and a half, to its junction with the Mississippi, at Mr. Aitkin's trading post, where we arrived at 4 p. m. and encamped. The trading house is situated on a long, narrow tongue or point, which separates the two rivers just before their junction.

It was purposed to remain here a day or two to make some repairs and alterations in our canoes, to change our Indian guides, and make other necessary arrangements preparatory to our ascending the Mississippi. We found Mr. Boudoin, one of Mr. Aitkin's clerks, in charge, who received us with great kindness and hospitality, and proffered all the assistance and information in his power.

This situation has long been regarded as an important one for the Indian trade. It was occupied by the old Northwest Company, and subsequently by the American Fur Company to the present time. Mr. Aitkin, the present agent of the company, makes this his residence, and central depot for the great district over which he has charge, the posts and trade of which have been described in another part of this journal. His establishment at present consists of a large comfortable dwelling, several storehouses, and barns, stables, &c.; he raises corn and potatoes in fields near the house, and has a good stock of cattle. The soil about the lake and rivers is rich, but, with the exception of a small portion about the house, is subject to inundation during the early spring freshets, when Sandy lake overflows with the Mississippi, and the great flood covers the country for many miles around. The water was now, however, fifteen feet within the banks of the river and lake, the latter, in its confines, presenting the very irregular figure that I have drawn of it on the map. The lake is within less than half a mile of the Mississippi, and the length of its outlet, Sandy Lake river, is only a mile and a half. Just above the junction the latter is fifty yards broad, and the Mississippi seventy-five yards. Just below the Mississippi is one hundred and ten yards. Our journey to-day was twenty-five miles. The mosquitos at night were more numerous than I had ever seen them.

July 4.—We found but few Indians here, those belonging to the post being mostly at their hunting grounds and fisheries. Mr. Schoolcraft, however, held a council with those present, and distributed some goods, leaving word for the other Indians of the band to meet him at the mouth of Crow Wing river, three hundred miles below, where we expect to strike the Mississippi, after leaving Leech lake, on our return. I took the opportunity of Mr. Aitkin's workshop and workmen to have four oars put to each of my canoes, which, when the canoes and streams will admit of them, are much better than paddles, particularly for

soldiers, who can be much easier taught to use the former. In fact, my men continued very awkward in the use of the paddle, and had it not been for my Indian steersmen I could not have continued thus far with the expedition. I discharged here the three Indians who had come with me from Fond du Lac, and Mr. Schoolcraft procured me two others to go as far as Leech lake.

We embarked in the Mississippi at 6 p. m., and ascended it twenty miles, in which distance it winds deviously through a valley of low, rich, alluvial bottom, of the best quality of soil, and beautifully timbered, but all subject to inundation.

July 5.—The river this day was of the same character as the part ascended yesterday, crooking through a low, rich bottom, from one to two miles broad, bordered by pine hills and swamps, the shores covered with a rich vegetation of soft maple, elm, walnut, linn, ash, &c., and a luxuriant grass, which clothed the banks in rich verdure down to the water's edge. The river, though considered high, was generally eight or ten feet within its banks; the current was gentle, about two miles per hour, excepting round the points of bends, where it was frequently quite strong. We encamped on the east bank, above the mouth of Swan river. Journey fifty-six miles. General course a little east of north.

July 6.—The valley of the river was narrower than yesterday, but of the same character. In its turns the river frequently washed the bases of the pine hills, which there rose in high sand banks. The whole country back was pine, pitch, and yellow pine, but in many parts the growth had been killed and destroyed by fire, and scarcely any vegetation was to be seen. We encamped on a burnt pine plain, of apparently great extent, (on the east side,) and 100 feet above the river. Mr. Schoolcraft encamped ahead. Journey fifty-two miles.

July 7.—Started at half-past three a. m., and passing the mouths of Trout and Prairie rivers (see my map) reached the Falls of Pacagama at half-past 12 m., where we had to make a portage of 250 yards on the east side of the river. The Falls of Pacagama are the most considerable of the Mississippi, from the Falls of St. Anthony, 750 miles below. The whole fall is between twenty and thirty feet in a distance of a hundred yards, and is nowhere perpendicular, but the channel is much contracted, and in one place the whole water runs down the surface of a smooth, plain rock, for a distance of forty feet, with a pitch of about 12°. The river here breaks through a low ridge that traverses its course perpendicularly in a north-east and south-west direction; and the rock is granular quartz, and the first rock of any kind that we have seen in place on the river. About a mile above the falls Pacagama river, a small stream, comes in from the west, and from this commence the great swamps and savannas, or wet meadows, which border the Mississippi on one or both sides for a great distance above. We were wading through these until 10 o'clock at night, seeking vainly for a dry spot on which to encamp, when we overtook Mr. Schoolcraft and party, who had been separated from us all this day and yesterday, encamped on a little dry point of oak woods, a kind of island in the vast marshes that he had found before dark. We were detained to-day repairing canoes, but have travelled fifty miles.

July 8, (Sunday).—We remained encamped, washing, cooking, and repairing canoes.

July 9.—The whole party set off together as soon as it was light, and entered immediately a great grass savanna, of eight or ten miles breadth, such as I have represented on the map, through which the Mississippi wound, more crooked than any part we had passed.

Pointe an Chêne, a long, dry point of oak land, noted by traders and Indians as a place of encampment, runs prominently into the vast fields of grass, about two miles above our encampment. One Indian family were located on it, and subsisted on ducks, which are remarkably abundant along this part of the river. The channel of the river, through the savanna, was sometimes three hundred yards broad, and again branched into many smaller channels, which ran a short distance and expanded into little lakes, bordered only with grass growing in the water, and from which other little channels, through the tall grass, ran on to unite again with the main one. The whole country seemed covered with water from one to three feet deep, but the grass rose several feet above the surface in the deepest parts, growing very thick, and possessing a strength so great that in many places, as in short bends, the current washed against it with great velocity and force, it stood as erect, as green, and as healthy, as that remote from the river.

Having an Indian guide who knew the general course of the river, we were enabled to cut off many of its great bends, by running directly through the peninsulas of grass; but although the water was two or three times more than deep enough to float our canoes, such was the nature and growth of the grass that it required the united strength of the whole crew to force a canoe through it.

The grasses observed were several species of carex, or sedge, the bulrush, the joint rush, and the Indian reed, (*Cinna arundinacea*.) These occurred sometimes separately, in areas of great extent, and sometimes altogether. Where the Indian reed grew alone, it was so tall, and straight, and close, that, although in four feet water, we could not penetrate it with our canoes.

Its great deviation from straightness makes it very annoying to follow the course of the river through one of these savannas; for, after pulling near an hour against a strong current, and turning an abrupt point where it is stronger, the voyageur finds himself at once going directly back for the same length of time. After winding through the savanna in this way for several hours, we left the Mississippi on our left, to take a nearer route to Lake Winnipeg, known to our guide, which is laid down on the map, and runs through a long and narrow but very deep little lake, Lac La Cross, remarkable as affording large, fine whitefish in abundance. From this we ascended a very small river three or four miles, to another little lake, from which we made a portage of 800 yards, into Little Lake Winnipeg, through which the Mississippi runs. By this route we cut off a great bend of the river, where it receives Leech Lake river, and saved thirty or forty miles travelling. A few miles further brought us to Big Lake Winnipeg, and to the trading house, on the north side of it, where we encamped at 5 p. m., having come to-day fifty miles by our route, and by the Mississippi near ninety miles.

This trading house is occupied by a trader of Mr. Aitkin, Mr. Belanger, now present, who has lived here for several years, without once going below. His dwelling and store were situated four or five hundred yards from the lake, on a little rise of ground, where he had a fine large garden, in which were growing beautifully vines, potatoes, and other vegetables, and among them tobacco, which was particularly remarkable, this being the most northerly point of all the Mississippi. The plant was now small, but looked well, and Mr. Belanger said it grew large and fine before the time for cutting it. He had also a stock of cows, in the finest order, fattened on the grass which grew in luxuriant abundance all around him. The grass is of the *genus alopecurus*, which, the soil being very rich, grows tall and thick, affording, for the mere labor of cutting it, a plenty of the best of hay. Great herds of cattle might be raised about this lake on the grass alone. The forest here is light, and principally oak. A small river which runs

past the house and empties into the lake has its source in a little lake, not a mile above, in which an excellent quality of whitefish are taken. Lake Winnipeg also affords this fish, and a small fish resembling it, called *tullibee* by the French.

This post is of some importance to the Indian trade, eight packs having been made here last winter, but they were mostly bear skins, and on that account not so valuable as packs are generally. It is but a short portage from here to a river of Rainy lake, and this is the route of our traders to that place, which is distant five days' journey. We obtained from Mr. Belanger much valuable information of the country above, and of our proposed route through it. There were but few Indians here present, but about one hundred trade at this post.

July 10.—Started at 4 a. m., and crossing Lake Winnipeg in the direction of its length, which is about 15 miles, we again got into the Mississippi, from the southwest end of the lake. This lake is nearly round, is without islands, and is deep and clear, excepting near its shores, where, for a great part of its circumference, the grass is grown out one or two hundred yards into the water. Pine hills are seen all round the lake a short distance back.

From Lake Winnipeg to Cass lake, a distance of twenty miles, the Mississippi is very sensibly diminished in breadth and quantity of water, and runs all the way through a savanna of the same character as that described yesterday, but narrow, from one to three miles broad, and bounded on both sides by high pine ridges and plains, on which, in many places, the pine is large, forming thick heavy forests of yellow and pitch pine. At the entrance to Cass lake, by the site of an old village, we were met by a number of Indians, who fired their usual salute, and conducted us to their village, which is at present situated on the large island of the lake, Grand island, ten miles from the entrance. We encamped near the village, on a long, narrow point of the island, running out to the north, and elevated about 150 feet above the lake.

Grand island occupies a large part of the southwestern half of this lake; it is about eight miles in its greatest length, and has three long attenuated points, at nearly equal distances from each other, which give its contour a singular shape; that on which we encamped is the most elevated, and has the richest soil, and is, hence, appropriated for the village and gardens; the remainder of the island being mostly pine ridges and poor. The top of this point is three hundred yards broad, and is slightly undulated by little hills and valleys and sinkings, wherein, the soil being the richest, the gardens are planted. The whole quantity under cultivation is about eight acres, producing potatoes, corn, and vines, now growing beautifully; and the great extent and abundance of the crops, in proportion to the number of Indians, conveyed an idea of providence and comfort that had not been excited by like evidences of industry anywhere else among the Chippewas.

The prospect from this high point was beautiful. The lake is twenty miles in length and nearly round; and from our elevated situation, near the middle of it, we could see much the greater part of its circumference. The water was remarkably clear, deep, and beautiful; the shore was sandy and high, and showed thick heavy forests of pine on hills and plains, immediately back. The immediate shores of the island were boulders of primitive rock. Five or six miles southeast of this is a little high island called "Red Cedar island," from which the lake took its former name, "Red Cedar lake."

The Cass lake band of Indians numbers one hundred and forty-eight, of whom about twenty are warriors. Their country or hunting grounds is rich in large game, deer, and bears, which, with their garden vegetables and the fish of the lake, afford them a plentiful subsistence. Their trader is one of Mr. Aitkin's clerks, who was not now present, to whom they give annually a good quantity of furs, beaver, marten, otter, and bears; and he, in return, seems to supply them well with the usual Indian goods. They are not much at war in the field, but from their vicinity to their natural enemies, the Sioux, it can never be said of them that they are at peace. Some of the young men were now absent at Leech lake, where they had just returned from an excursion against the Sioux with the Leech lake Indians, under the Leech lake chiefs. Two or three that went from here had got home, bringing news of their success, and of the loss in battle of one of the Cass lake Indians, the only Chippewa killed in the excursion. They gave us also information of the whole proceeding of the war party, their battle, &c. The party was one hundred strong, consisting almost entirely of the Leech lake band, and was led by Flat Mouth, their principal chief, by whom it had been raised to chastise the Sioux for numerous aggressions on this band on their hunting grounds west of Crow Wing river. They met a war party of the Sioux of inferior strength on these grounds, near their western boundary, and defeated them, killing three and wounding two or three more, but lost one of their own men, as before stated. The Sioux fled and the Chippewas returned immediately, but so much elated with their success that one would have supposed, from their manner of relating the story, and the character of their rejoicing, that they had defeated the whole Sioux tribe and killed half of them. The party had been got up after the Indian manner, with so much pomp, preparation, and ceremony, that the whole country had been excited; and in their great anxiety and solicitude for the result of the campaign, a single victory and paltry success, as it was all they had done, was viewed as a monstrous achievement. The party had returned after the first little fight apparently satisfied, and without stopping to inquire what more they could do, or how much they had gained for all their trouble.

A portion of one of the Sioux scalps now taken had been brought to Cass lake, and the Indians here regaled us with a *scalp dance* soon after our arrival. They had two other scalps taken at former periods, and all were exhibited on this occasion, stretched by means of thongs in the centre of wooden hoops, a foot in diameter, profusely ornamented with feathers; staves or handles, four or five feet long, were attached to the hoops, and in the dance each was carried above her head by an Indian woman, who sang and danced incessantly. The other Indians around—men, women, and children—all engaged in the singing and kept time on the Indian drum, and by beating anything, but the dancing was done entirely by the women who carried the scalps. Two of them were young, but such was their excitement on this occasion, that they seemed to have forgotten the peculiar modesty of Indian women of their age; holding their heads erect, casting fierce and wild glances on all around, and showing an expression of countenance, at times, almost fiendish. A like enthusiasm seemed to animate the aged and the children; and an observer of these ceremonies, when he reflects on their frequent occurrence, will not be at a loss to account for the irreconcilable hatred which exists in the breasts of these Indians for their enemies. They had been dancing here for many days previous to our arrival, and they continued now, without the least cessation, until after twelve at night. They expect during this dance, when strangers are present, to receive presents for the benefit of the widows or families of their warriors who may have perished in battle, and our men and voyageurs were liberal in the observance of this custom.

We were busied, from our arrival till night, in making preparations to continue our journey to the

source of the Mississippi; and it was arranged to leave our large canoes and most of our men here, and proceed in small canoes borrowed from the Indians. Five of these were provided for the five gentlemen of our party, and the provisions and necessaries for the trip, each to carry a passenger, a share of baggage, and two voyageurs; this being a full load for canoes of their very diminutive size. But a *branch* of the river which we were to ascend was represented to be so very small as to be only navigated with canoes of this size. Yellow Head, an intelligent Indian, who belongs to this village, and who came with us from Lake Superior, continues as our guide.

July 11.—All proper arrangements for our further journey being completed the previous evening, we made an early start. I left my men and baggage in charge of my corporal, and took one of Mr. Schoolcraft's voyageurs and an Indian to conduct my canoe, as I could not intrust the management of so small and delicate a craft to any of my men. These very small canoes require a care and skill to conduct them safely only known to those long accustomed to the use of them. They are used by the Indians of this country because the streams are all small, and because, in many of their routes, there are numerous portages, where it is a great object to make the carrying as light as possible. These reasons have determined us to adopt them on this occasion; for we expect to ascend a small branch of the Mississippi, and to make a long portage from its head to the source of the larger branch.

We entered the Mississippi from a bay on the west side of Cass lake, and passed, in a short distance, through two small lakes and a savanna, above all which we still found a large river, forty or fifty yards broad, and from two to six feet deep, which wound its way through a narrow valley of low, alluvial bottom, confined by pine hills, up to Lac Travers, forty miles above Cass lake. In this distance there are many rapids running over boulders of primitive rock, but there is no fall, and no rock is seen in place.

Lac Travers may well be arranged among the sources of the Mississippi. It is a beautiful lake, about ten miles long from north to south, and about half as broad, surrounded by pine woods, which rise into high hills on the north and northwest, forming a part of the chain dividing the waters of the Mississippi from those of Red river. The western shore is much indented with bays, but the east and southeast is beautifully regular and plain, with a sandy bank, and beach of pure white sand. The river empties into the south end of the lake, and runs out at the east side, not far from its entrance, leaving the great body of the lake to the north of our passage through it. There is a trading house on the west bank, near the mouth of the river, which is occupied in winter by a clerk of Mr. Aitkin. From Lake Travers we passed by a broad channel, one hundred yards long, into another small lake, and half a mile above this came to the forks of the river. The branches are of nearly the same breadth, about forty feet, but the stronger current of the right hand branch denoted it much the larger. We ascended the left or east branch, as we had intended, which soon narrowed to twenty feet breadth, and, in a distance of ten or twelve miles, brought us to Lake Rabbalkanna, or Resting lake, a pretty little lake, four miles in diameter, and nearly round, with a low beach of smooth pebbles all round it. We encamped a few miles above this lake at 7 p. m., having come this day, by my estimate, fifty-five miles. Our course to Lac Travers was northwest; from the latter nearly south.

July 12.—This was a rainy, disagreeable day, and the mosquitos were numerous, hungry, and extremely annoying, but we travelled, notwithstanding, at our usual speedy rate. Our course has been south, and the valley of the river was savanna and tamarack and cedar swamp, but generally narrow, about half a mile broad, with low ridges and a miserable growth of pine bordering it on both sides. The river has become very small and somewhat rapid, and we have encamped after making a portage of two miles round a chain of rapids. One of our Indians killed a deer this morning, and we saw many more during the day. This country is so very remote and dreary that the Indians seldom visit it, and the deer are more abundant than about the river below; ducks are also very numerous in the savannas, where there is wild rice. Journey fifty-two miles.

July 13.—We ascended the river in our canoes ten miles further, to a little lake, (Usaw-way, or Perch lake,) about two miles long and half a mile broad; the river was very narrow and crooked, through a low, narrow meadow, and a little above this lake we left it, seeing that we had now traced this smaller branch of the Mississippi into the very swamps and meadows, from the drainage of which it takes its rise.

From here we set off, overland, in a southwest direction, to reach Lac La Biche, represented as the source of the larger branch. Our canoes and baggage being very light, all was transported at one load, one man carrying the canoe, and the other the baggage of each of the party. In this way we made a portage of six miles in four hours, and struck the lake, the object of our search, near the end of its southeastern bay. The first mile of the portage was through a tamarack swamp, and the remainder, excepting a little lake of 300 yards diameter, was over pine ridges of the poorest character imaginable. The soil was almost pure sand, and the pine was stunted and mostly of the scrub species, (*Pinus banksianus*,) which, hung as it was with lichens, and no other growth, not even a bush or shrub mixed with it, presented a picture of landscape more dismal and gloomy than any other part of this miserably poor country that we had seen. Not a bird or animal, scarce even a fly, was to be seen in the whole distance of this portage, and it would seem that no kind of animal life was adapted to so gloomy a region.

From these hills, which were seldom more than two or three hundred feet high, we came suddenly down to the lake, and we embarked and passed nearly through it to an island, near its west end, where we remained one or two hours.

We were now sure that we had reached the true source of the great river, and a feeling of great satisfaction was manifested by all the party. Mr. Schoolcraft hoisted a flag on a high staff on the island, and left it flying.

Lac La Biche is about seven miles long and from one to three broad, but is of an irregular shape, conforming to the bases of pine hills, which, for a great part of its circumference, rise abruptly from its shore. It is deep, and very clear and cold, and seemed to be well stocked with fish. Its shores show some boulders of primitive rock, but no rock in place, and are generally skirted near the water with bushes. The island, the only one of the lake, and which I have called Schoolcraft island, is one hundred and fifty yards long, fifty yards broad, and twenty or thirty feet elevated in its highest part; a little rocky in boulders and grown over with pine, spruce, wild cherry, and elm.

There can be no doubt but that this is the true source and fountain of the longest and largest branch of the Mississippi. All our information that we had been able to collect on the way, from traders and Indians, pointed to it as such, and our principal Indian guide, Yellow Head, who has proved to us his close intelligence of the country, represents the same. He has formerly hunted all around it, and says there is a little creek, too small for even our little canoes to ascend, emptying into the south bay of the lake, and having its source at the base of a chain of high hills, which we could see, not two miles off, and

that this is the only stream of any description running into it. In fact, the whole country showed that there was no stream beyond, for the lake was shut in on all sides by pine hills, and the only opening through them was that by which it discharged itself. To the west we could see distinctly a range of almost mountains, covered with pine, which was undoubtedly the chain dividing us from the waters of Red river.

It will be seen from my map, that Lac La Biche is but little west of *south* from Cass lake, and almost due south from Lac Travers, which is a different position from that assigned to it on published maps, where it is invariably represented north of Cass lake. There is, however, a little stream, Turtle river, entering Cass lake from the north, in the route of traders to Turtle lake and Red lake, but it is a very small and insignificant stream, and is only forty-five miles in length.

We left Lac La Biche from its northern boundary, having coasted nearly its whole circumference, and found the Mississippi at its very egress from the lake a respectable stream; its channel being twenty feet broad and two feet deep, and current two miles per hour. Its course was northwest, and soon ran through a chain of high pine hills, where the channel contracted very much, and numerous rapids occurred of very great fall over boulders of primitive rock; the river running for the distance in a deep ravine. We descended twenty-five miles and encamped.

July 14.—The course of the river was nearly north all day, passing several miles of rapids in the morning, in one of which my canoe was upset, and I lost my compass, and, with everything else, my notes were wet and much injured. Mr. Schoolcraft, however, furnished me with another compass, and I proceeded, securing my notes as well as I could until night, when I would have an opportunity to dry them. After the rapids the river was of gentle current, and ran mostly through savannas of wild rice and tamarack and cedar swamps, but the valley of the swamps and savannas was generally narrow and bounded by hills of inferior pine, and sometimes a small thick growth of aspen poplar where the pine had been destroyed by fire.

We travelled very rapidly all day, and when we stopped at night had made seventy-five miles. After supper Mr. Schoolcraft and the other gentlemen continued on, being anxious to reach Cass lake; but I remained encamped till morning that I might in daylight continue the tracing of the river and my observations of the country.

The mosquitos were thick and very troublesome all day, as has invariably been the case in our route through swamps and savannas.

July 15, (Sunday).—Left my lonely encampment as soon as I could see to trace the river, and ran down with a gentle current, most of the way through savannas and rice meadows, to Lac Travers, a distance of twenty miles. The junction with the branch we ascended is just above this lake, and the lake and river below are described in our route ascending, (July 11.) I travelled very rapidly in consequence of the numerous rapids below Lac Travers, and reached Cass lake and the encampment at 6 p. m., having travelled this day a distance of sixty-five miles. Mr. Schoolcraft and party had gone all night, and arrived at 9 a. m.

Thus the journey to the source of the Mississippi and back has been accomplished in five days, a distance of 290 miles, it being 125 miles to Lac La Biche by the route ascended, and 165 by that descended, or by the longer and larger branch which runs from Lac La Biche; this latter being the true length of the river above Cass lake. This makes the length of the Mississippi above the Falls of St. Anthony 1,029 miles, or 1,038 miles above the St. Peter's river and Fort Snelling. The true character of the river above Sandy lake is represented on my map, which is also in a measure descriptive of this part of the country.

My men, being left here during this trip, have had a very useful and necessary rest from the excessive fatigues of the former part of the journey, and, excepting the man who was hurt on the portage of Fond du Lac river, are well recovered. The Indians are represented to have danced the scalp dance every night of our absence, and they are still dancing.

July 16.—Mr. Schoolcraft held a council with the Indians of this band, and constituted the Indian Yellow Head a chief by presenting him with a large medal, the emblem of his authority. Yellow Head, who had travelled with us, and been our principal guide from Fond du Lac, had proved himself in the course of our journey to be industrious and intelligent; he had also character and influence with his band, and it is probable he will make a good chief. He seemed fully aware of the responsibility of the new relation in which this placed him to his band; and when he received the medal, and during the speech and advice of Mr. Schoolcraft to him, he manifested by his manner and countenance the strongest interest and concern.

The council and the distribution of the few presents Mr. Schoolcraft had to give, and the vaccination, kept us till 10 o'clock a. m., when we started for Leech lake, parting here with Mr. Dufour, the trader who had accompanied us from Fond du Lac, and who was going from here to Red lake, his post. Our direction to Leech lake was south, the route leading from a deep bay of the south of Cass lake over a short portage to a little lake, and thence over another portage of two miles on a pine plain to another little lake, from which by a very small river we entered a western bay of Leech lake, and got to the chief's village at 10 o'clock at night, having, notwithstanding the portages, travelled this day a distance of near forty miles.

July 17.—The village of our encampment was Flat Mouth's, (Aish-ka-bug-a-kosh), who is the principal chief of his band, and perhaps one of the most powerful and influential men of his whole nation. He is also their principal orator, and on all occasions like the present, when councils are held on their general interests, he is looked up to with great confidence and respect, and depended upon to say and do whatever is necessary for the benefit of the whole. He had heard of our coming by a message sent from Lake Winnipeg on our way up, and seemed to have prepared himself for the occasion. I visited his house, which is built of squared timber, and like the trader's house, early in the morning, and found it in a neat condition, and the walls hung round with his flags, war clubs, spears, pipes, medals, and wampum; all arranged with a peculiar taste. His medals, wampum, and flags were spotted with red paint, a circumstance which he afterwards explained in his speech in council. He invited Mr. Schoolcraft and the interpreter to breakfast with him, his assumed dignity on this occasion, as we understood it, not allowing him to invite any but the principal of the party.

The Indians of this band, who were living at different parts of the lake in several villages, began to assemble at the chief's village as soon as they heard of our arrival, and Doctor Houghton commenced vaccinating immediately. Flat Mouth dined with Mr. Schoolcraft by invitation, and in the afternoon the council was held, at which most of the band were present. The few presents which Mr. S. had to give them were soon distributed by two or three of the subordinate chiefs; after which Mr. S. held a "talk," wherein he advised the chiefs and warriors to endeavor to put a stop to their feuds with the Sioux; to

cultivate peace, and to take care of their women and children; to hunt their rich forests for game, cultivate the soil, raise corn, and endeavor to procure and enjoy some of the comforts of the whites, and to learn to live like them. He told them they ought not to *make* war with their neighbors, but it was not expected of them to sit still and be "struck;" that they might properly carry on a defensive war, but they should not *go to war* without cause; that the great father, the President, loved them, and was ever watchful of all their actions, and it was his wish that the Sioux and Chippewas should live happily and at peace with each other.

Flat Mouth spoke in reply. That he considered Mr. Schoolcraft as appointed and sent to listen to the Indians, and he wished him to listen attentively to what he had to say. He intended to speak fearlessly; his young men and warriors expected him to do so, and would think lightly of him if he did not. He had long listened to the admonitions of his great father to maintain peace with the Sioux; but his great father had not fulfilled the promises of protection made to the Chippewas at the treaties of Prairie du Chien and Fond du Lac; and the unchecked aggressions of the Sioux had now become so intolerable that it was necessary for the Chippewas to punish the Sioux themselves, and it was their fixed determination to do so. That it had been promised them, at these treaties, that the "long arm" of the President should be constantly extended over them to protect them, and if the Sioux made further aggressions upon their territory the arm of the President would reach them and draw them back and chastise them. This had not been done. The Sioux had, since that time, made frequent inroads, and had killed great numbers of their young men, and among them his own son; but the long arm of the President had not yet reached the aggressors to inflict the promised punishment. He had, therefore, resolved to listen no longer to advice to keep peace, but to revenge his numerous injuries by fighting and killing his enemies; too many of their warriors and relatives had been murdered for his people to think of any other course. [Here he gave a bunch of short reeds, about fifty, to represent the number of his young men killed by the Sioux, since the treaty of Prairie du Chien.] The blood of so many had stained everything around him, and must, in some way, be washed away; it covered everything he had received from the government, his medals, his flags, the letters of advice which had been sent to him from the agent through the traders; the wampum sent him by the President, and the very ribbons that now suspended the medals and wampum from his hand; all were dyed deep with the blood of his murdered young men. He wished the government of the United States to wash it off, and make his medals as bright as when he received them; and until this would be done he could not consent to remain at peace. If Mr. Schoolcraft could do this, he wished him to do it now and at once, for he regarded it as a stain upon the government and his tribe; and he now threw down his medals before Mr. Schoolcraft that he might make them again bright, [throwing them down at Mr. Schoolcraft's feet.] His warriors had but now returned from an excursion against the Sioux, in which they had killed three of their enemies, but they were by no means satisfied; and he had sent messages to different bands inviting to another campaign, and expected before the snow fell to be again in the field. He deplored the poverty and weakness of his tribe; the very trees of the forest were dropping tears of pity over them, and he thought it a duty of the government of the United States now to give them assistance to chastise their enemies, as had been promised them. If it did not, he would go beyond the Americans to men wearing hats, (meaning British) to seek help. He wished to say a great deal to Mr. Schoolcraft, and if he would wait till the next day he would be prepared to make a better speech and to say many things more.

During this speech he was surrounded by most of the warriors of his band, who, by their ready and general response, seemed to be well pleased with it. His manner was bold and vehement, particularly when he spoke of the Sioux, and from the glow of excitement in the eyes and countenances of his warriors I could see that they fully entered into his feelings.

Mr. Schoolcraft said a few words in reply to parts of the speech, and the council broke up a little before sunset, when we immediately embarked and went about three miles down one of the bays of the lake to encamp.

This was altogether the most interesting band that we had met with among all the Chippewas whom we had visited. Their lake is the largest of all the lakes which contribute to the waters of the Mississippi, being more than one hundred miles in circumference, and most curiously formed of deep and narrow bays, which afford abundance of wild rice, while their immediate shores are of a character of soil very rich, and suitable for their gardens. The Leech lake band is too large to live comfortably in one or two villages, and is therefore dispersed in little villages all around the lake and on two of its islands. The number of the band is put down, from the most accurate information we could obtain, at eight hundred and thirty-six, eight hundred and six of whom live about Leech lake and thirty on Pacagama river.

Their country abounds in furred animals and game, and the lake affords abundance of fish: whitefish, herring and tullibee, which they take in gill-nets at all seasons. Deer and bears are the principal animals of the forest which are hunted for their meat; and beavers, otters, martens, and muskrats are the chief furred animals, which are taken in such great numbers as to make this one of the most valuable posts of the north for the American trade. About seven thousand dollars' worth of furs are annually sold to American traders, and great quantities are taken from here across the lines to the British trader at Rainy lake, and sold there for whiskey and some British goods. These Indians have a partiality for the British, which they take no pains to conceal, and, as far as is in their power, they obtain their supplies from the British traders. Mr. Aitkin is of opinion that four or five thousand dollars' worth of furs are annually traded by this band across the lines to the Hudson Bay Company. From their remoteness from white settlements they still retain much of their native character. They have not been debased or enfeebled with whiskey, from the difficulty of obtaining it in great quantities; and, unlike most of their tribe, they are strong, athletic, muscular men, of large stature, and fine appearance, looking proud, haughty, and unsubdued, and carrying an independence and fearlessness with their manner that indicates a full estimate of their own strength. They have sometimes robbed their traders of a part of their goods, and have hence acquired the name of "The Pillagers," or "The Robbers," but of late years they have been less troublesome to their traders, and are not much complained of except for their impudence, and a total disregard of and disrespect for the power and government of the United States. They are undoubtedly inimical to our government and friendly to the British, and such is their ignorance and arrogance that they have threatened to drive away the American trader and bring a British one, whom they would maintain and protect among them.

The strength of the band in warriors may be estimated at about two hundred, which is much greater than that of any other single band of the nation; the Chippewas being, in consequence of the great poverty of their country, divided into numerous bands and villages, and scattered over their vast territory.

The Leech lake band, being nearest to the Sioux, are in a state of continual war with them; and their hatred for this enemy of their tribe is perhaps the strongest feeling of their nature, which has grown and strengthened with them from their very infancy. As Flat Mouth remarked to us, "it was decreed by the Great Spirit that hatred and war should ever exist between the Sioux and themselves; that this decree could never be changed; and the Chippewas must ever act accordingly." In the wars of this band with the Sioux, however, they associate with other bands, as those of Lake Winnipeg, Cass lake, and Red lake, as they had done on their recent excursion when they had sent out a hundred warriors.

The nature of their country protects them from inroads of their enemies to their villages, and they feel inaccessible and secure from any power whatever, even that of the United States. The traders have, in vain, to threaten with the power of the government to check their excesses; their reply is that they have not yet seen that power, and that it cannot reach them.

It is probable, however, that our visiting them with such apparent ease may have the effect of lowering their ideas of their inaccessible position.

They have several war chiefs who are much superior in appearance to Flat Mouth, and who have a much better character for warlike qualities. But the latter is the great chief in council where his oratory sustains his authority; and he is acknowledged by all their principal chief.

The excitement of their recent success against their enemies was still prevailing to a great extent, and it was one object of our leaving their village to escape from the noise of their dancing.

Mr. S. had engaged for me two guides and steersmen in place of the two from Sandy lake, who now left me to return home; but we started so soon after the council that they were displeased, and did not join us at night at our encampment as they were requested.

July 18.—We waited for our guides to join us until six in the morning, but they did not come, and we embarked without them. Our route was now to the head of Crow Wing river, which we were to descend to the Mississippi, and our only guide was a map or sketch of it drawn by a Leech lake Indian. We ran several miles down a deep bay to the south of the lake, and, after much coasting and searching, found the portage leading from it, which we crossed in a direction a little west of south over a pine ridge to a small lake; and passing through this and four other small lakes with sandy shores and clear, beautiful water, filled with fish, and connected together by very short and narrow channels as described on the map, we came to another portage of 700 yards, to another lake, which, with three more little lakes and as many more portages, brought us to *Long lake, the source of Crow Wing river*. These portages were all short and over pine ridges with pine forests of yellow and pitch pine; and the lakes were deep, clear, and beautiful, with the pine hills coming down to the water. This whole country is pine, and is filled with hundreds of these little lakes, all of the same character, and without outlet or inlet; three or four may be seen from a single point on an elevated hill. It was night when we got through the last portage, and we encamped at the end of it on the shores of Long lake, which, though also small, has an outlet, which is Crow Wing river, or the great western branch of the Upper Mississippi.

Flat Mouth and another chief had overtaken us, but no guides had yet come, and I felt apprehensive of danger in descending the river without other steersmen than the soldiers, with whom I had not yet dared to trust the management of my canoes in rapids; and who, in fact, were unpracticed and unskilled as steersmen, my having had Indians in that capacity all the way till now. In consequence of the portages we made but thirty miles to-day.

July 19.—We took leave of the old chief Flat Mouth and his companion, Major Gaw-bo-way, and starting early passed through Long lake in its length, which was about four miles. This is the first of a singular chain of eleven pretty little lakes, from two to five miles in length and near together, from which Crow Wing takes its rise. The channel or river connecting them is at first very narrow, shallow, and crooked, but increases a little in size in passing through each, until where it leaves the last of the series it is thirty yards broad, from two to five feet deep, and running three miles per hour. We had no other guide through these lakes than our rude Indian map; and in one of the last of the chain, being then three or four miles ahead of the other canoes, I was misled in my search for the outlet, and ran several miles in a wrong direction into a bay of the lake, where I found a small river coming into it, and in the mean time Mr. Schoolcraft's canoes passed me unobserved. When I had found the right way I did not know if Mr. Schoolcraft were in front or rear, and waited some time for him to come up, and then proceeded, still ignorant of his situation until late in the afternoon, when a tremendous storm and rain drove me to encamp at half-past four o'clock on a pine plain.

The country passed to-day has no other novelty than that of its total destitution of Indian habitations; being too near the borders of their respective territories to be used by either the Sioux or Chippewas, excepting as a route for their war parties and as an occasional hunting ground for some of the daring young men of the Leech lake band, who are sometimes led hither to hunt by a scarcity in their immediate grounds and by the abundance of this, the game here being abundant from its not being much hunted.

It is here that the Chippewas, and particularly the band at Leech lake, have lost so many of their braves, who in these daring hunts have been cut off by lurking Sioux. Hence the bitter complaints of the Chippewas against the Sioux, this land being properly a part of the territory of the former, and valuable for game and furs. Journey to-day fifty miles.

July 20.—Started from my encampment as soon as I could see, and in a short time passed the last lake of the eleven sources of the river, and to which the river is merely tangent, running only one or two hundred yards through the wild rice and grass of one end of it.

Ten miles below this lake I passed the mouth of Leaf river, which comes in from the northwest, and is almost as large at its mouth as Crow Wing river, and is navigable for canoes fifty miles to its source in Leaf lake. Ten miles below this river I passed Mr. Schoolcraft's encampment of the previous night, thirty miles from mine. Supposing me to be ahead of him, he had gone on till late at night to overtake me, and had consequently got this distance ahead of me. As we were in the hourly expectation of meeting on this river a war party of Sioux coming out against the Chippewas, I felt anxious to be up with Mr. Schoolcraft, and continued with all possible speed, which was now near ten miles per hour, assisted as we were by a strong current. Passing a willow swamp through which the river ran for a distance of twelve or fourteen miles, we came suddenly to a most interminable chain of strong rapids, twenty-four of which occurred in a distance of thirty miles, and some of them a mile or more in length. From the ignorance of my men in steering canoes the passage of these rapids was dangerous, but by directing the first canoe myself, and requiring the other to follow her closely and in the same track, we got down the whole with but slight injury. It is the method of Canadians and Indians in descending rapids in canoes to allow them to float, and to check them continually by poles at the bow and stern to avoid the rocks;

but as my men had not the skill for this, I caused them to row with all their might, and steered the canoes with paddles by means of their headway over the current. By this means my speed was so much increased over that of Mr. Schoolcraft's that I overtook him in the afternoon about two o'clock. Below the rapids the river attained a breadth of more than one hundred yards, and twenty miles below Shell river comes in from the west through an immense willow marsh and discharges itself in a mouth forty yards broad. This is called a large river by the traders, and is navigable for large canoes sixty miles to its source in Shell lake.

Below this river the Crow Wing has much of the character of the Upper Mississippi—broad, shallow, muddy, and sandy bottom, with long sand bars running out from the points; it runs through several willow swamps, but is generally confined by high banks, falling from pine hills and plains. We encamped on an elevated pine plain after sunset, my distance travelled to-day being 120 miles, and Mr. Schoolcraft's 90, both greater than usual in consequence of the rapidity of the general current and my increased exertion in the forepart of the day to overtake Mr. Schoolcraft.

July 21.—The river continued to increase in breadth to its mouth, where it divides into two channels, but just above which it is between two and three hundred yards broad, but shallow—not more than five or six feet deep. About twenty miles from the mouth it receives Long Prairie river from the west—navigable for canoes thirty miles to a lake, which is its source. We reached the Mississippi, forty miles from our encampment, at 12 o'clock.

The Crow Wing river is discharged by two mouths, nearly equal and near a mile apart, separated by Crow island, in one side of which the Mississippi makes its curve. The island is about three miles in circumference, of rich, alluvial, vegetable soil, supporting a rich heavy forest of elm, ash, linn, walnut, soft maple, &c.; but, like all the little alluvial bottoms of the Crow Wing and Upper Mississippi rivers, it is inundated every spring. The river has its mouth three hundred miles above the Falls of St. Anthony, and three hundred below Sandy lake,* and is the largest river that empties into the Mississippi above the Falls of St. Anthony. It is two hundred and ten miles in length to its source in Long lake, from which its general course is nearly south to the Mississippi. It is navigable for canoes all the way, and for boats, in low stages of water, to the rapids—about 80 miles. In very high stages the rapids may be passed by Mackinac boats, which might then ascend nearly to its source. It is by far the nearest route, by water, from Fort Snelling to Leech lake, and presents no greater difficulties to navigation than the Mississippi does above the Falls of St. Anthony. It runs, all its length, through a country of pine plains and gentle hills, so regular, smooth, and free from undergrowth that, as I was informed, a cart might be driven, near its banks, almost to Leech lake. If troops were to be sent against the upper bands of Chippewa Indians at any future time, this would be a proper route for them to take, whether in boats or marching; and, from the tone and manner of the Leech lake Indians, observed during our visits, and the unfriendly character given of them by their traders, it is probable that such a measure may become necessary.

The Crow Wing river country, and that of all its tributaries—Prairie, Shell, and Leaf rivers, and two or three little streams coming in from the east—is rich in furs and game, such as beaver, marten, rats, bears, &c., and deer; but much of it is not hunted, because of its border character to the Sioux territory.

The east bank of the Mississippi, opposite Crow island, is near one hundred feet high, and the country back is an immense rolling prairie, which is here poor, the soil being dry and sandy. Here we found the whole of the Sandy lake band of Indians encamped, awaiting our arrival, Mr. Schoolcraft having given notice, as we passed Sandy lake on our way up, that we would meet them here on our return. This band consists of about 280 souls, of whom sixty are warriors. Their principal chief is Gros Gueule, or Big Mouth, who, in his youth, was a man of energy and influence; but he is now old and imbecile, and his authority has declined with his vigor, until his band are not much prone to take his advice. His policy has been peace; and it is many years since his band have fought the Sioux. But he remarked to Mr. S. that he was fearful this state of things would not continue, as the excitement of the recent successful war excursion of their brethren, the Leech lake Indians, had spread to his band, and he might not be able to restrain his young men from taking part in any other expedition against the Sioux that might be got up. This band, however, is poor, and their country exhausted; and these circumstances will, undoubtedly, restrain them more than the influence and advice of their declining chief.

Their hunting grounds are about Sandy lake and along both banks of the Mississippi as far as this place; but the game of the country, deer and bears, is scarce, and does not, with the fish they get from Sandy lake and some other small lakes, afford them a sufficient subsistence; and much of their food, in winter, is supplied by Mr. Aitkin, their trader at Sandy lake. Since the prohibition of whiskey in the Indian trade, these Indians, like those of Fond du Lac, have increased more rapidly than the poor state of the country will admit of; and it is now only their trade in furs that saves many of them from starvation. They were, however, pretty well clothed, and looked healthy and comfortable.

Mr. Schoolcraft held a council with them, in which Gros Gueule complained much of the treachery of the Sioux, who, he said, had often, under the appearance and assurance of friendship, invited some of the Chippewas to their lands and villages to share the abundance of their forests, and, when the latter had gone with this prospect and to escape the poverty of their own hunting grounds, their entertainers had suddenly risen upon them and murdered them all. He hoped the government would interpose to check the Sioux and protect the Chippewas from their aggressions, as was promised at the treaties of Prairie du Chien and Fond du Lac.

After vaccinating them and giving them some presents and advice, we embarked and proceeded ten miles below to Mr. Baker's trading house, where we encamped.

July 22, (Sunday)—We remained at the house of Mr. Baker, who politely gave us much valuable information respecting the country, above and below. I am indebted to him for the topography of the country east and west of the Mississippi, from Sandy lake to St. Peter's, which I have given on my map in the character, course, and length of the streams which enter the Crow Wing and Mississippi rivers. The following is also derived from him: The prairie where he lives, east of the Mississippi, extends from about one hundred miles below Sandy lake down below Prairie du Chien, and back from the river to the pine country intervening the waters of the Mississippi and Lake Superior. Its soil is generally poor, but affords abundance of grass; and in some places where the prairie is low and level, as near rivers, it is rich. Timber occurs over it in numerous little groves and clusters and isolated trees, but it is generally an inferior species of the oak. Pine grows on some of the highest parts, and near some of the rivers—

* According to the estimate of the traders, which is probably too great.

mostly white pine, (*pinus strobus.*) Mr. Baker has driven a cart from Fort Snelling to his house in summer, and he says the prairie is practicable for carts as far as Sandy lake, excepting a few obstructions of narrow rivers. Beaver, otter, and rats are taken about the rivers; and deer and bears are tolerably abundant about Mr. Baker's and below, but above and more remote from the Sioux and Chippewa boundary line they have been so much hunted by the Sandy Lake Indians that they are now scarce.

On the west side, opposite Mr. Baker's, is a thick green forest of oak, poplar, sugar-maple, and pine, which extends up to the pine plains about Crow Wing river, down about a hundred and fifty miles, to where it terminates in prairie, and back from the river to what is called "The Plains," a part of the great prairie of the Sioux, where they hunt the buffalo.

The buffalo are frequently driven by severe winters to take refuge in this forest, and they sometimes penetrate it to the Mississippi in search of water in winter; but in summer they roam continually over their boundless prairies; and are nowhere seen near the Mississippi, and east of it they are not now to be found anywhere at any season of the year. The western side of the river abounds in deer, elk, and bears, much more at this place than the eastern.

Mr. Baker's house is prettily situated on a point in a bend of the river, at the foot of a moderate rapid, just above which the river expands, and three small islands, heavily wooded, of about equal size, lie parallel to each other in its breadth, separated from themselves and the main land by four equal and parallel channels, and presenting from the house a very pretty view. This is the commencement of the thousands of islands of the Mississippi, which occur from here to its mouth. Mr. Baker is a trader of Mr. Aitkin—he has been here only one year, and has made but little improvement; but the land about him being rich, it is his intention to raise cattle and hogs, and to make this a permanent trading post. Being near their lines, he will trade with both Sioux and Chippewas, though there is no village of either near him at present.

July 23.—I abandoned one of my canoes, which was worn out, and borrowed one of Mr. Baker, to take me to Fort Snelling. He also gave me two of his Canadians, whom he was sending to the fort for supplies, to act as steersmen and pilots over the numerous rapids below. I had now four oars and two paddles in each of my canoes, which being also light of baggage and my men fresh after the rest of yesterday, we were enabled to course the rapid current with incredible speed. At a distance of ten miles we passed the "Little Falls"—a chute where the river is contracted from three hundred yards to fifty yards, and falls about ten feet in sixty, through a formation of talcous slate rock—the first rock we had seen in place since leaving the Falls of Pacagama. A little further down we passed Pike's rapids and the site of Pike's blockhouse, where Lieutenant Pike wintered his command in 1805-'6, and a little further a chain of rapids called the "Grand Rapids," where the river runs over an extensive rock formation of granular quartz.

We also passed during the day another rapid at the mouth of Elk river, and the "Big Falls," at the mouth of Sac river; and a short distance above the latter, the mouth of Little Sac or Watah river, where the boundary line of the Sioux and Chippewas, established by the treaty of 1825, crosses the Mississippi; Watah river making in its whole length a part of the line, and entering the Mississippi about one hundred and twenty miles above the Falls of St. Anthony. We encamped at night near the last of six other rapids called the "Six Prairie Rapids," which occur at nearly equal distances apart, in a distance of fifteen miles, having travelled, during fourteen hours, a distance of 160 miles.

The river was broad, (three or four hundred yards,) excepting at the rapids, and islands occurred at the point of every bend. The fall in the rapids was nowhere so great as in the chute passed in the morning. The banks were high, sometimes coming down in a gentle slope, which was covered with luxuriant grass (*poa compressa*) to the edge of the water, and sometimes abrupt sand to a height of one hundred feet. Before night the forest had disappeared on our right, and beautiful green prairies were seen on both sides.

July 24.—A short distance below our encampment we passed the mouth of St. Francis or Parallel river, a considerable stream, running parallel to the Mississippi, and navigable for canoes one hundred miles. And further down, on the same side, the mouth of Rum river, which is sixty yards broad at its mouth, and is navigable for canoes one hundred and fifty miles to Mil Lac, a lake almost as large as Cass lake, where the American Fur Company have a trading house, and where there is a village of one hundred and twenty Indians. Another branch of Rum river, called Kettle river, has its source near Fond du Lac river, one hundred miles north of Mil Lac.

Several smaller tributaries of the Mississippi are delineated in their appropriate place on the map of this day's journey.

We arrived at the Falls of St. Anthony at 1 p. m., and at Fort Snelling at 3 p. m., a distance of ninety miles* from our encampment. The river and country passed to-day have the same character as yesterday, the country being uneven prairie on both sides and the river filled with islands, but becoming wider continually, from its numerous tributaries, until it has a breadth of four hundred yards. The falls have been described by Mr. Schoolcraft and other former travellers, who had more time to observe them than was allotted to me. I have only to correct an error in the height of the perpendicular fall. It was estimated by Lieutenant Pike, sixteen feet, and by Mr. Schoolcraft, forty feet. I was told by an officer at Fort Snelling that by actual measurement it was eighteen feet precisely. Below the falls there is a considerable rapid, and the whole descent at this place, including also the rapid above, may be estimated at eighty feet. Between the falls and Fort Snelling, a distance of nine miles, the channel is contracted in a deep ravine, between bluff rocky banks of great height, and the river runs in a torrent all the way. The house and mill belonging to the United States at the falls seemed to be in a good state of preservation, though not used.

On my arrival at Fort Snelling I reported to the commanding officer, Captain Jouett, and made requisition for provisions to take my detachment home, the provisions I had started with from Fort Brady being now nearly exhausted. We expected to hear at the fort something definitely of the Sac war, but did not, no news having come from it of any consequence.

July 25.—Was occupied at Fort Snelling in preparing the provisions for transportation in canoes and over portages, and in making necessary repairs to my tents, canoes, &c., for the remainder of the journey. Captain Jouett gave me every assistance in his power, but the kegs for my pork could not be completed this day, and although Mr. Schoolcraft had completed his business with the Indians here in the

* This diminishes the distance from Crow Wing river to the falls fifty miles beneath the estimate of the traders, who make it 300 miles. My estimate is 250.

afternoon, we were obliged to remain over night. I purchased a canoe to replace the one abandoned at Mr. Baker's, the best I could get, but it was a very bad one. I got another man here also, one who had deserted from Lieutenant Clary the preceding summer at La Pointe, and was taken by Mr. Warren, the trader at La Pointe, to Fort Snelling, and delivered to the commanding officer. This increased my party to eleven men.

July 26.—I completed the packing of my provisions this morning—the pork in kegs and the flour in bags—and embarked from Fort Snelling at half-past eight a. m. Mr. Schoolcraft started earlier, but was detained at a Sioux village, Little Crow's, below, and I overtook him at breakfast; after which we all proceeded together until one of my canoes was broken on a snag, and I had to put ashore at a Sioux village to repair, which detained me half an hour, and in the meantime Mr. Schoolcraft's canoes got so far ahead that I could not overtake them. This occasioned me some trouble and perplexity, for our route was to leave the Mississippi at the St. Croix river, forty or fifty miles below Fort Snelling, and I had neither guide, map, nor directions to enable me to distinguish the mouth of the St. Croix from the hundreds of channels into which the Mississippi is divided by its numerous islands. I was misled by two or three of these channels, which came in with every appearance of separate rivers, and was, consequently, detained; but at five o'clock I got really into the St. Croix, which I soon recognized after I had entered it, by the long lake near its mouth. I proceeded up this lake fifteen miles, and encamped alone, Mr. Schoolcraft and party being somewhere ahead.

The country about the Mississippi below the falls is the same as that above, but the river itself is broader and its banks are higher, the country having preserved its general level, whilst the river has dropped eighty feet at the falls. The valley is from a half to two miles broad, of a low bottom land or vegetable deposit, and is cut up by channels into numerous little islands covered with fine rich land-timber, but all subject to inundation.

The St. Croix enters the Mississippi by a mouth seventy-five yards broad, opposite an island of the latter, and fifty miles below Fort Snelling. Its right bank, at the mouth, is a perpendicular rock eight or ten feet high, (calcareous sand rock,) and the left is a low, acute point. A few hundred yards from the mouth it opens into a long, narrow lake, Lake St. Croix, which seems to fill or lie in a valley, the hills rising to form its banks, on each side, in green, gentle slopes. Journey to-day sixty-five miles.

July 27.—The Lake St. Croix continued twenty-one miles beyond our encampment, making its whole length thirty-six miles in a north and south direction. It is clear and deep, and seldom more than three or four miles in breadth. The country on each side is the same prairie that borders the Mississippi. The lake gradually contracts at its upper end to the breadth of the river, and is filled at this part with low, little willow islands, above which the river has a uniform breadth of about seventy yards, and current of two miles per hour. The immediate shores of the river are skirted with a low, narrow, rich bottom, like the Mississippi, but the land about it is higher, poorer, and more hilly as we ascend. The canoe I got at Fort Snelling proved to be bad and troublesome, and has detained me much in repairing it; in consequence, I have made but forty miles. I have seen nothing of Mr. Schoolcraft, though his encampment of last night was but seven or eight miles above mine.

My encampment to-night is a few miles above a cedar bluff on the east side of the St. Croix, called by the Indians the Standing Cedars, where the Sioux and Chippewa boundary line crosses the river.

July 28.—At my encampment last night I met a trader, Mr. Brown, of the American Fur Company, who had been trading a year or two on the St. Croix, a few miles above, at a post which he had now abandoned to establish another at the mouth of the river. He represented the rapids above to be so numerous and so frightfully bad that I was almost determined to turn about and go home by the way of Prairie du Chien and Green Bay. But I learned that Mr. Schoolcraft was only seven or eight miles ahead, and I supposed he would wait at the rapids for me to come up, to render me whatever assistance circumstances might require; and after purchasing a canoe from Mr. Brown, the best he had of three, I abandoned the one I had got at Fort Snelling, now almost a wreck, and proceeded.

A few miles above where I encamped the river is traversed by a primitive rock, which, for a distance of one or two hundred yards, confines the channel within perpendicular walls fifty feet high, and rises in a high, abrupt little island in the middle of the stream, but occasions no rapid. Above this the banks are high and steep, but not rocky, till within a mile of the falls, when the channel becomes suddenly contracted to from fifteen to thirty yards, by rocks forming mural precipices on each side fifty and one hundred feet high, between which the river, though very deep, is urged with great velocity. This rock and the narrow channel continues, with a few interruptions of coves and fissures, one mile up, to the falls, where the river is but forty feet broad, and rushes with great force and violence down a fall of fifty feet in three hundred yards. The whole of this rock is greenstone trap, and its surface presented to the river in high cliffs is exceedingly rugged and broken, prismatic fragments being continually detached from it and tumbled down.

It had not been possible to teach my men the whole science of canoe management, and I had the greatest difficulty in getting through this rocky, rapid, and difficult pass to the foot of the falls and portage, my canoes being frequently in the most imminent peril of being driven on the rocks and dashed to pieces by the force of the current. These falls are twenty-four miles above Lake St. Croix. The portage round them is six hundred yards, which we made, and embarked from the head of it at 3 p. m., having been occupied from early morning till this time, steadily and laboriously, in getting eight miles from our encampment.

Above the falls the river is a continued rapid for five miles; running for this distance in a broad channel over an entire bed of boulders and fragments of rock. But being generally shallow, it was not so difficult or dangerous to ascend as the rapids below; and my men, by wading by the side of the canoes, could push them along, and in some measure protect them from the rocks. It, however, required five hours to get over this rapid, and we encamped at the head of it at 8 p. m., on the west bank of the river, near the site of Mr. Brown's late trading house, having, with the utmost exertion, made this day but thirteen miles. The land about our encampment is level and very rich, supporting a heavy luxuriant forest of ash, oak, walnut, sugar-maple, &c., but it is the first really good land that we have seen on the river, and does not appear to be extensive. Mr. Schoolcraft encamped last night at the foot of the falls, but did not wait for me this morning as I had expected he would, and I have not seen him since we left the Mississippi.

July 29, (Sunday.)—Mr. Schoolcraft had made it a rule not to travel with his party on this expedition on Sunday, and supposing he would observe the same on this day, I confidently expected to overtake him before night. I was particularly anxious to do so, inasmuch as I had now no gum* for the repair of

* A resinous exudation from pine, used in the construction and repair of bark canoes to close the seams and holes in the birch bark.

my canoes, and I knew he had an abundance; and I wished, moreover, to get, through his means, at the first Indian village, two Indians to steer my canoes; by which my men could be saved from much of the wading and consequent hardship and exposure of the method of ascending rapids that the want of competent steersmen had forced me to adopt, and by which they are now so much exhausted, and bruised in their feet and legs, as scarce to be equal to the exertions still necessary and required of them. I accordingly urged forward as much as possible, and got to the site of Mr. Schoolcraft's encampment in the afternoon, where I learned, by a note left for me by Dr. Houghton, that the whole party had left two and a half hours before, with an intention on the part of Mr. Schoolcraft, not to wait for me anywhere on the route, but to proceed home with all possible speed, giving as a reason for this measure, that the river was falling, and any delay but increased the difficulty of ascending it. I was dissatisfied with this proceeding of Mr. Schoolcraft, and deemed it unwarrantable by the official relations in which we stood to each other, inasmuch as I was thereby deprived of the services of the surgeon and interpreter, to which I considered myself rightfully entitled within the intention of the department, so far as such services might be necessary for the safety of the detachment, and to enable me to execute my instructions. These gentlemen had been employed for the purposes of the expedition, and as the execution of certain of those purposes had been separately assigned to me, I had a right to expect that the means provided for their execution should not be withheld from me by the power to whom they were intrusted by the department to control; but by this sudden and unadvised withdrawal of those means out of my reach, I was not only embarrassed in the performance of an appropriate duty, but placed in a situation of extreme inconvenience, and even danger, which could not have been anticipated or intended by the department in the project of the expedition. It is not to be supposed that the department would require soldiers to travel through such a country as this, and encounter the extraordinary exposure and danger incident to their transporting themselves without some provision of medical aid; and still less could it be deemed practicable for a detachment of troops to effect a journey through an unknown, wild, inhospitable Indian country, without guides of any kind to direct, or an interpreter, through whose means to obtain guides or necessary geographical information. But such was my situation now; I had this route to travel, of which I neither knew the length or direction, the quantity or character of its difficulties, or the time and means that would be required to overcome them. For supposing that I was to travel it with Mr. Schoolcraft, who had guides, I had not made any useful inquiries respecting it. In this embarrassment I would have turned back and sought another route home; but, from the number of rapids which I had already ascended, I supposed there could not be many more to the summit of the river; and that, consequently, it was as easy to go forward as back, and particularly as, with my present means, it was less difficult to ascend than descend rapids. Moreover, by the route of Prairie du Chien, I could not now hope to reach Fort Brady for a long time, in which apprehensions with the commanding officer there for my safety, as he could not hear of me after the return of Mr. Schoolcraft, might, I supposed, lead to measures which a more speedy return by this route might avert. And again, Dr. Houghton informed me in his note that he would wait for me at La Pointe, in Lake Superior, that we might pursue a previous arrangement, by which he was to travel home with me, that we might make some further examinations along the lake; and unless I called there for him he could not probably get home this fall. These considerations induced me to continue the route, bad as the prospect was of finding it.

But of Mr. Schoolcraft, it is a subject of just complaint that he has separated himself from me at a time when I most depended on him, and when knowing, as he did, the unfitness of my men for the sole management of canoes on this difficult route, he must have been fully aware of the great exposure and fatigue which I must encounter in the accomplishment of this journey without *his assistance*, which he had now withdrawn, but which it was in his power and was his duty to afford.

Had Mr. Schoolcraft told me at Fort Snelling that it would be for me to perform the remainder of the trip alone and on my own resources, I might there have secured sufficient resources, or, being relieved from the escort duty of protection to his party, I might have returned home by another and less difficult route, which I probably would have done. But by a strange interpretation or disregard of his official relation to the escort, he has led it, ignorant of such a contingency, into a situation of difficulty not compatible with its separate means of resistance, and there left it to encounter the difficulty as it best might.*

I continued a few miles above Mr. Schoolcraft's encampment, and stopping for the night, having given up all hope and prospect of overtaking him. My men having been in the rapids most of this day also, were much worn out and discouraged, and my canoes leaked badly, and could not be repaired for want of gum.

The country passed to-day is hilly and poor, with a scattered growth of pine and scrub oak.

July 30.—The rapids to-day were numerous and bad, and, with the exhausted condition of my men, I made but little progress, not more than fourteen or fifteen miles, and stopped at night at an Indian village at the mouth of Snake river, thirty-seven miles above the falls.

About three miles below the village I met three Indians in a very small canoe, with a note for me from Mr. Schoolcraft, by which it appeared that they were sent to "guide and assist me up the rapids," for which service I was to pay them in provisions. They returned with me to this, their village, and signified that they would go no further, this being as far as their father (Mr. Schoolcraft) had asked or employed them to go. I gave them to understand, by signs or whatever means I could, that I wished two of them, at least, to guide me to the source of the river, and that I would reward them liberally with provisions for such service, but none of the village would consent to go, excepting one young Indian, the chief's son, who, taking a fancy for a calico shirt I was wearing, agreed to go two days' journey with me on condition of my adding to this my former liberal offer of provisions. But I could offer nothing to induce any of the others to accompany me, even for two days, because, perhaps, they were not in need of provisions, and I had little else to give them. Undoubtedly, if I had had some articles of Indian goods, I could have succeeded better.

This village is of the Snake river band, the chief of which is Po-ghee-koo, who had been to Washington, as appeared by a paper he showed me, signed by Mr. Calhoun. There were sixty or seventy Indians present, ten or twelve of whom were men. Their trader is Mr. Warren, who sends goods to them every

*The uniform and obliging politeness which I experienced with Mr. Schoolcraft during the whole previous journey on this expedition makes me regret to have to record this exception.

It is also due to him to remark in this place, that he did send three Chippewa Indians from the mouth of Snake river "to guide and assist me up the rapids," but they met me only three miles below their village, and would not accompany me above that point, giving me to understand that this was all Mr. Schoolcraft had required of them. They were consequently of no use to me. He also subsequently, when he had reached Lake Superior, sent me two Indians in a canoe, who met me on the Bois Brul' river, (which I was descending,) about forty-five miles from its mouth, and were of much service to me from there down to the lake.

winter from his establishment at La Pointe. Their country affords abundance of deer, bears, and fish, and they seemed to be comfortably clothed. They seldom war with the Sioux, being too near the post of Fort Snelling, and they look skulking and mean, and are thieving, as I experienced.

July 31.—It was 9 o'clock this morning when I had completed the repairing of my canoes. I purchased all the gum I could get of these Indians, for which I paid enormously, but could not procure near so much as I wanted, my canoes consuming much of it for the frequent repairs required on this river. We passed rapids again nearly all day, and made but seventeen or eighteen miles. The river, losing its tributaries as we ascend, is getting lower continually, making the rapids, where the water is shoal, more destructive to the canoes. The country to-day and yesterday is poor, and pine; none of it fit for cultivation. All the way from the falls the bed of the river is filled with boulders of primitive rock.

August 1.—The river was less rapid to-day, is filled in this part with sand-bars and skirted with low lands and swamps, with pine hills back. We reached the mouth of Yellow river at 4 p. m., a distance of thirty miles. Here is a large Indian village and a trading house, which Mr. Warren occupies in winter, by one of his clerks. Most of the Indians and their chief, however, were absent.

Yellow river comes into the St. Croix from the southeast, and is one of its principal tributaries; it is navigable for canoes sixty miles to its source, near Ottawa lake, and runs through several little rice lakes. My Indian guide from Snake river refused to go further, and I could not induce any of the Indians here to take his place, but I succeeded in making one of them understand that I wished him to sketch me a map of the river above, which he did, though very badly. We encamped a few miles above the village, where some of the Indians followed us unperceived, and with a most daring theft, stole the bread which was baking at the fire, before which the men were sleeping.

August 2.—Ten miles above Yellow river we passed the mouth of the Namakwagon river, another large branch of the St. Croix, coming in from the east, where we found an Indian encampment of two lodges, and I was again unsuccessful in an application, as well as I could make it, for a guide, but they sold me some gum and birch bark for provisions. The St. Croix above was very sensibly less, and its numerous rapids broke my canoes and detained me as usual; one of them was repaired in the bottom this afternoon with about six square feet of bark.

In the course of the day I met a hungry Indian and his wife descending the river in a good little canoe, which I purchased for an injured bag of flour of about eighty pounds weight. The canoe was worth about ten dollars, but the flour, according to traders' prices for it, was worth twenty dollars, and this would appear cheap to any one who should witness its transportation to this place. By means of this canoe I lightened the other two, and passed the rapids much easier. I met, also, the Indian chief of this country, Keppameppa, with a note from Mr. Johnston, the interpreter, enclosing a sketch of the Bois Brulé river, which I was to descend to Lake Superior. Journey to-day sixteen miles.

August 3.—The river has become so low that we have to wade over all the rapids, which seem to be *indefinable*. Many of them to-day were over shelving sandstone rock; the fragments of which, broken and strewn in the channel, have cut up my men's feet and the bottoms of the canoes horribly. Made about the same distance as yesterday.

August 4.—Passed a long expansion of the river, grown over with wild rice, on the east side of which is an Indian village of seven or eight lodges, with gardens of potatoes, squashes, and corn adjacent. This is Keppameppa's permanent village, but all the Indians were now absent, hunting or fishing. Twelve or fifteen miles above this village we came to another expansion or narrow rice lake, five or six miles long, the upper end of which receives Ox river; the St. Croix coming in below Ox river on the west side. From my ignorance of the route I was near getting lost at this place by following up the wrong river. A broad, plain channel, with a current all the way, leads up through the rice to the mouth of Ox river; but the St. Croix, which is here the smaller of the two rivers, comes in, as it were, on one side of the rice pond, and has its mouth, in a measure, concealed by the grass growing in it. Each canoe passed in succession to the mouth of the former river without noticing the latter; but I had remarked as I passed, an opening in the woods, as though a stream came in; and after entering the mouth of the wrong river, I went back to be satisfied as to this appearance, and found the stream, but from its being smaller than the other, I was still in doubt which to take till I had followed it up a short distance to a rapid, where I observed on a rock in the bottom a little red spot, which, on examination, proved to be red lead paint rubbed from Mr. S.'s canoe, which had touched the rock. This little circumstance determined this to be the proper route and saved me from the error of taking the other, which, if I had done, might have led to further error and been attended with serious consequences, for, if I had been lost for many days in this poor country till my provisions were exhausted, starvation would have been almost inevitable.

From here the St. Croix, now very small, crooked a few miles through a tamarack and cedar swamp and brought us to its source, in a beautiful, deep, clear lake, (Upper Lake St. Croix,) twelve miles long, and from one to three wide, with a pretty little island near its southern end, on which were two Indian lodges but no Indians.

We passed through the length of the lake which lies north and south, to the portage, leading from its northern extremity to the Bois Brulé river. It is surrounded by pine hills, at the base of which, on its western side, there is a little good land, where the Indians have gardens. The lake is forty-six miles above the Namakwagon river, and two hundred and one miles from the mouth of the St. Croix.

We have now been nearly ten days ascending this river, though, on leaving Fort Snelling we expected to reach Lake Superior in eight days; but this has been for me a most difficult route, and my progress has consequently been very slow.

Excepting twenty or thirty miles at its head, this river is filled with rapids from its source to the falls; and in a distance of one hundred and twenty miles its descent cannot be less than seven hundred feet. Our course up the river was, for the first sixty miles, north; afterwards northeast, to its source. Above Snake river the country is poor, showing cedar and pine hills next to the river, and pine hills back; mostly yellow and pitch pine.

The country bordering the St. Croix and its tributaries, is called the "Folle Avoine," or Wild Rice country, from its many rice ponds and lakes. I could not ascertain the number of Indians in this country, but they are not numerous. They subsist on wild rice, fish, and game, of which they have abundance, and to spare to their traders, who depend principally on these Indians for their meat. They furnish annually about five thousand dollars' worth of furs, composed of otter, martens, rats, bears, raccoons, and deer skins, with some beavers and foxes. They looked meaner and were more thieving than any of the Chippewas I had met with. They hate the Sioux, but seldom war with them.

The portage from St. Croix lake runs over a high pine ridge of six or seven hundred feet elevation

above the lake; from the summit of which, looking to the westward, across the valley of the Bois Brulé, high conical peaks and regular hills, closely covered with only pine, may be seen rising one above another as far as the eye can discern. The length of the portage is two miles.

About a mile from the head of the lake and west of the portage the Bois Brulé has its source in a large spring or little lake, twenty yards across, of clear cold water, from which the Bois Brulé runs on one side, and a small stream to the lake on the other: one to Lake Superior, and the other to the Mississippi. But in seasons of floods and high waters the Bois Brulé runs from the larger lake, and through the smaller. Where the portage struck the river the latter was very small, about eight feet broad, five or six inches deep, of very clear and cold water, running swiftly over a sandy bottom. I got part of the baggage through and encamped on the portage.

August 5.—The men's feet and legs were so very sore from the effects of their previous wading in the rapids of the St. Croix that the carrying on this portage distressed them much, and although the baggage was now comparatively light, it occupied them till twelve o'clock to get over what had been left the previous evening.

We embarked and descended the river eighteen miles to encamp. At first the stream was very narrow and shoal, barely floating the canoes without the men; but after winding through a wet meadow and a tamarack swamp, in which it received several little streams in a distance of ten or twelve miles, it had increased to a width of thirty feet and a depth of one or two feet, with a current of one mile per hour. Its shores were very much clustered with a species of alder, (*alnus serrulata*), which in narrow parts interlocked over the stream so thick and close that it was hard to force the canoes through it.

August 6.—Two or three miles from our encampment brought us to the "Little Falls," where the river, from being thirty yards broad above, is contracted to fifteen feet, and falls through a rocky channel fifteen feet in fifty yards. It may be passed in light canoes, skilfully managed, but I had mine carried over the portage one hundred and fifty yards, on the west side. Below the falls the river was mostly rapids, which were of so bad a character, from the shallowness of the water, the strength of the current, and the rocks with which they were filled, that, to pass them with any degree of safety, we were obliged again to wade by the side of the canoes and conduct them down, and even by this means we could not save the canoes from great injury. We had to stop frequently to repair, and before night had exhausted all our gum, after which it required one man to bail constantly in each canoe, to keep her free, and when we stopped at night they were all in a sinking condition. The muskets, boxes, all our baggage, excepting the flour, which was piled above everything else to save it, was wet thoroughly. But it is our greatest misfortune to be out of gum, for without it the canoes cannot be repaired, and without great repairs my canoes will not be in a condition to carry us much further. I have procured all the gum I could from all the Indians I have met with on the St. Croix, but my canoes have been so often broken as to have required it all. From the wreck of an old canoe found in the river this evening we have procured a little, with which we have repaired, as well as we could, for to-morrow.

We have come to-day twenty-two miles, in which distance the river is very crooked, winding through a low, narrow valley, which is bordered by cedar and pine hills of the most forbidding aspect.

I made an attempt to walk down the shore with three of the men; but from the numerous ridges, ravines, and swamps, we found it much easier to wade in the bed of the river.

The river is exceedingly cold and clear, and is filled with thousands of the real mountain brook trout.

August 7.—This has been a most disastrous day. For the whole distance that we have come, which is about twelve miles, there is scarcely a part of the river that is not rapid, and much of it is of the worst character that it is practicable to descend. On starting this morning, I required all the men, except one, disabled, to wade, and lead the canoes with the utmost care; but the rapids were so strong and the rocks so slippery that it was not possible for them to keep their feet, or to save the canoes from striking often, and before 8 o'clock in the morning all my canoes were leaking badly; they had been so often repaired that their bottoms were nearly gummed over, and every touch on a stone knocked some of it off and opened a leak. At 8 o'clock, however, I met two Indians in a very little canoe, whom Mr. Schoolcraft had sent from the mouth of the river to bring me gum and to pilot me down. The gum was of great service in enabling me to proceed with my canoes; but their little canoe was too small to carry anything of consequence, and neither of the Indians would consent to leave it to take charge of mine; and their piloting was of no use, for my men had not the skill to follow them, or to steer a canoe as they did, by means of poles. In the afternoon, after I had used up all the gum again in repairs, my largest canoe had her bottom literally torn off in a rapid, and sunk, and her baggage had to be taken by the others, already loaded too much. A little after I met two canoes, with two Indian families, going up; and after failing in an endeavor to purchase one of them with anything I could offer, I hired the two men to leave their families here, and with one of their canoes to take a portion of my baggage down to the lake, for which I gave them two soldiers' blankets, provisions, and some other articles. But they refused, for additional compensation, to allow a soldier to take the place of either in their canoes, that the other might steer one of mine; fearful, no doubt, from observing the condition of my canoes, that the skill of a soldier was not a good guarantee for the safety of theirs. After this arrangement we reached the first portage below the falls, where the baggage was carried, over a very ugly road, one mile, and the canoes, lighted, passed by the river, and I encamped at the lower end of it. But when my canoes were taken out, one of them proved to be a wreck, and irreparable, which reduced me to one small Indian canoe of my own and the two still smaller ones of the Indians. These were insufficient to transport my baggage and men, and there was no resource left but to walk, which, from the nature of the country, seemed to be impracticable without a guide who could lead by some route over the hills, and far back from the river. One of the Indians whom I had hired above seemed to know the country, and by offer of liberal compensation I induced him, though not without difficulty, to consent to allow a soldier to take his place in the canoe, while he would guide us through the country to the lake—a distance, as I understood him, of one day's journey. I made my arrangements accordingly; seven of the men and myself were to walk with the guide, and the remainder, including him who was lame, to go with the canoes.

August 8.—When we rose this morning, my guide and his companion had disappeared. I and my men had slept soundly, from the fatigues of the previous day, and the rascals had stolen away with their canoe in the night, unperceived, taking with them the articles they had received for their hire, and a quantity of bread that had been left to bake at the fire. I was not in a situation to pursue them, and, as they could ascend the river much faster than me, pursuit was useless. I had now but two little canoes left for all my baggage. The soldier who was lame and a few articles of loading—all it would safely

carry—were embarked in the lesser one of the Indians, and the remainder in the other, giving it in charge to two of my best men, with instructions, as it was overloaded, to wade wherever they could, and lead it down slowly. The remaining seven of the men and myself set out to make our way overland, taking with us provisions for two days, a few blankets, a musket, and a fowling piece. All set off at 6 a. m. I attempted at first to follow the valley of the river; but it was so thickly grown over with brushwood and cedar, and presented so much swamp, as to be utterly impracticable, and I was forced to leave it and take to the hills, which presented difficulties but little less forbidding, their ascent being six or seven hundred feet, steep, and covered all the way up with a growth of tamarack, cedar, and thick undergrowth, which appeared to be impenetrable. Their summits were generally covered with pine, but were irregular, and made a very bad route, which was often, too, intersected by deep ravines, running to the river, and presenting sides as steep and as closely covered with cedar, &c., as the valley itself. Swamps also occurred in the depth of the ravines, and had to be crossed. By means of a compass, I kept, as well as I could judge of it, the general direction of the river, and during the day descended quite to the river several times, to be sure of not getting lost. The men followed me very badly, their feet and legs being bruised and cut, and much swollen, from the effects of the rapids. Most of them found it troublesome to walk at all, and one was so far overcome by sprained and bruised ankles as to ask to be left in the woods; but as I had only two days' provisions, and knew neither the distance nor difficulty between me and the lake, I felt a strong necessity to urge them on as fast as they could bear. Towards sunset, however, after we had come about thirty miles, we ascended a high peak of a pine hill, where one of the men ascended a tree and got a view of the lake before us; and descending then to the valley of the river, a few miles more brought us to its mouth, and an Indian village. We had walked about 35 miles over an inconceivably bad route, and were all much fatigued; the distance by the river to the point we left this morning is 40 miles, and our route over the hills has been almost as devious. The Indian canoe which had started in the morning arrived about an hour after us; but the other did not, being too much loaded to keep up with the Indians.

August 9.—My canoe had not arrived at eight this morning, and fearing some accident had befallen it, I borrowed a canoe from Mongarid, the chief of the village, and taking one of my men in the bow, and a supply of gum, I set off to meet it. I had applied myself much, necessarily, to the conduct of my canoes, and could now steer one as well as any of my men. We proceeded up the river 18 miles, over very many rapids, and found the canoe and baggage on the shore; the men in charge of it having come thus far with great trouble, when their gum was exhausted, and the canoe so much injured as to be unfit to proceed further without repairs. We had met one of the men a few miles below, on his way to the mouth of the river for gum.

I repaired the canoe with nearly all the gum I had, and, taking half the loading into mine, I embarked again, but had proceeded only a little way when the broken canoe required further repair. It had been so much thumped on the rocks that its bottom was almost destroyed, and was so loose now, on the distending bars, that every knock it got jarred the whole bottom and cracked off the gum from every part of it. But I could not dispense with this canoe as the other would not carry the baggage, and had recourse to another and novel method to keep it afloat. Finding a tough, marly, red clay in the bank of the river, I took the canoe out and had its bottom rubbed all over with it, until it was forced into the seams and leaks, so as to stop them completely. I then embarked the canoe and urged her on as fast as possible, until the clay dissolved out and the leaks again opened, when a similar process, hastily repeated, was alike effectual. In this way, applying the clay about every half hour, I reached the mouth of the river with both canoes and all the baggage about ten o'clock at night.

The journey down the Bois Brûlé has thus required five days, and has been a scene of trouble, difficulty, and danger, nearly all the way. The river is ninety-four miles long, and from the Little Falls (twenty-two miles from its source) to its mouth, in a distance of about seventy miles, it has a descent of more than seven hundred feet, without a perpendicular fall of more than eighteen inches or two feet in the whole distance; hence some idea may be formed of the great quantity and strength of rapid which must necessarily occur in this short river.

From the falls the river winds through a deep ravine between high pine-topped hills, the sides of which, next to the river, were thickly grown over with cedar, pine, tamarack, and brushwood; near the mouth of the river the hills rose very steeply, and the growth was mostly cedar, (*cupressus thyoides*), and in some places the whole forest had slid off, exposing a bare bank of red clay of considerable height. Where rock occurs in the bed of the river, *in place*, it is sandstone; but in most of the rapids the bottom is sandstone fragments and primitive boulders. The channel in some of the rapids is broad and shallow; in others narrow, with a very powerful current or chute. The source and mouth of the river are nearly on the same meridian, but in its course it curves considerably to the east.

My men have suffered more on this river than on any other part of the expedition. Their fatigues and exposures have been greater than men ought to be subjected to without strong necessity; but, under the circumstances, such fatigue and exposure could not be avoided. For, at Port Snelling, I had only estimated for flour to take me to La Pointe, on Lake Superior, where I had a supply, estimating the probable time until I would reach the lake at seven or eight days; but I soon found that a much longer time would be required to accomplish the journey of the St. Croix and Bois Brûlé rivers, and that, although I had an excess beyond what was necessary for the computed time, I was still in danger of not having enough; and particularly as much of the flour was unavoidably injured by the constant sinking of my canoes. The greatest exertions were therefore necessary to avoid the inconvenience of *falling short of provisions*, and the men were required to do all they could from the time of our leaving the Mississippi. But, with all the diligence we could use, this is made the fifteenth instead of the seventh or eighth day that we have been on the way, and one day more would have exhausted our flour. Mr. Schoolcraft, anticipating such a contingency, has left a bag of flour here for me, which will take me to La Pointe.

The distance from the Mississippi to Lake Superior, by the route we have come, is two hundred and ninety-five miles, and is very direct, but very bad for canoe navigation; both of the rivers being very rapid, and at low stages of water, like the present, almost impracticable. In accomplishing it now my men have been, some of them, badly injured, and all so much exhausted and overworn that they could not have continued much further in the same way.

I might, however, have avoided many of the difficulties of this route if I had previously known its character; for, with a small supply of Indian goods, I might have purchased several small Indian canoes on the St. Croix river, where the river became too small for my larger ones; and by this arrangement

alone most of the trouble might have been saved. Two men only can work in a canoe to advantage in ascending rapids, and, consequently, the smaller the canoe is the more *effectual* will be their exertions; and, in descending, the small canoe is easier turned from the rocks; and when it does strike, it is with less force than the larger one; and it is, consequently, less injured and easier repaired. Very small canoes, however, are objectionable with awkward men, as they are then more liable to be upset than the larger ones.

But the management of bark canoes, of *any* size, in rapid rivers, is an art which it takes years to acquire; and, in this country, it is only possessed by Canadians and Indians, whose habits of life have taught them but little else. The common soldiers of the army have no experience of this kind, and consequently are not generally competent to transport themselves in this way; and whenever it is required to transport troops by means of bark canoes, two Canadian voyageurs ought to be assigned to each canoe, one in the bow and another in the stern; it will then be the safest and most expeditious method that can be adopted in this country.

Mongarid, the chief of this village, has brought my boat here from Fond du Lac river, where I gave it to him in charge on my way up, and has kept it safely; he has also shown more willingness to oblige me on this occasion than any Indian I have met with, though he is aware that I have nothing wherewith to compensate him.

Mr. Schoolcraft had left the mouth of the Bois Brulé on the morning of the 6th; he was, therefore, four days ahead of me.

August 10 and 11.—Embarked again in my boat on the lake early on the morning of the 10th, and reached La Pointe in the afternoon of the second day. Here I found Dr. Houghton waiting for me, agreeably to promise, and our arrangement for a better examination of some parts of the lake shore; and Mr. Boutwell, the missionary gentleman, who had made the route of the expedition with us, and was now to remain with the mission here, to pursue his pious efforts for christianizing the Indians. The country along the lake is described in a former part of this journal, and need not be spoken of again.

August 12 and 13.—Leaving La Pointe on the 12th, with Dr. Houghton, we reached the mouth of Ontonagon river on the 13th at three p. m., where we were much disappointed in not finding Indians, expecting, as we did, to get some of them to conduct us to the "Copper Rock," on this river, which it was our purpose to visit. The village which we found here on our way up had been broken up, and the Indians dispersed to their gardens and hunting grounds in the country back. After some search, however, we found a little Indian canoe laid away in the bushes, and Dr. Houghton and myself, with two of my men, set off in it, after I had drawn out my boat and set the men to repairing her in my absence, the doctor, who had made a hasty visit to the Copper the previous summer, undertaking the office of guide.

August 14.—We reached the forks of the Ontonagon, 38 miles from the mouth, at 1 p. m. Here the river branches into two equal streams, both of which being too rapid to ascend further, we left our canoe and followed the ravine of the right branch two and a half miles, when we ascended a bare bank of red clay five hundred feet high, which, although very steep, was of easier ascent than any other part, from its being free of timber. From the summit of this our course was west, corresponding with that of the river, and led for seven or eight miles through a tall, heavy forest, and over the best land by far that I had anywhere seen on the lake or near it, it being elevated, rolling in parts, well watered with beautiful springs, and very rich in soil and timber—large sugar-maple, birch, hemlock, oak, &c.; and in several places I saw little patches of leatherwood, (*dirca*), which grows only on the richest of land. On a little hill here we found trap rock in place, from which it may be inferred that this rock forms a part of the Porcupine mountains, which are seen from the lake between La Pointe and the Ontonagon, and which have heretofore been thought to be entirely granite. We finally (to-day) lost the proper route and got lost, and struck the river six or eight miles above the Copper, where it was broad and deep, with but little current, and abrupt high cedar hills rising immediately from the water on both sides, and, turning back from this point, we encamped on a high hill, in a forest of heavy pine timber.

August 15.—From the great elevation of our encampment, we followed down a deep ravine to the river, and, after a few hours of troublesome search, found the "Copper Rock," the object of this annoying and difficult journey. It lies in the edge of the river, resting on small boulders of primitive rock, and near the foot of a red clay bank twenty or thirty feet high. It is bright on the surface, from the washing and abrasion of sand during freshets, which makes it very conspicuous, and easily distinguished from the numerous boulders of primitive and sand rock which form the bed of the river in this part. But it is also much disfigured by the cutting with cold chisels by travellers, at different times, for specimens; and in one place is mixed with particles of serpentine rock, which seem to affect the solidity of the mass. The copper, however, is continuous throughout, and a specimen cut from any part of the mass will contain twice as much native copper as rock. The mass rings, when struck with a hammer, as though it were solid metal, and it is probable that the imperfection of solidity observed on its surface does not extend far into it.

Its early visitors (among whom is Henry) have estimated its weight at about *five tons*; subsequently it has been stated at *one ton*. My estimate is: of its mass or solid content, *twenty cubic feet*; and of its weight, consequently, *between four and five tons*. It is probable there are four tons of pure metal in it, after deducting foreign matter, and this, I believe, makes it *the largest mass of native copper ever found*.

We made an attempt to cut through a part of it four inches thick, to get off a specimen of about thirty pounds weight; but when we had cut in about one inch and a half, further effort only broke our chisels, and we did not succeed. Large specimens might be taken from it by means of saws, but its edges and thinner parts, where chisels were effectual, have already been taken away. We, however, cut off about twelve pounds, in little pieces, from different parts of the mass, and left it at 2 p. m.

It was one of the objects of our visit to ascertain if there were any other native copper, or ores of copper, in the vicinity of this extraordinary mass, and, after careful search, we did not discover a particle or trace of either.

Returning, we followed down the bed of the river, which was filled with large and small boulders, and the water being low and rapid, we could wade it without difficulty. About two miles below the Copper, we came to the falls, where the river is contracted between mural precipices of sandstone rock from fifty to two hundred feet high, and falls about two hundred feet in two miles. The first and greatest perpendicular fall is fifteen feet, after which the river tumbles over successive strata of the rock, and has several perpendicular descents of from one to three or four feet. We could not pass this part without ascending to the top of the precipice, and the rock on top was covered with soil and a growth of timber.

The strata of the sandstone dip to the south, rising northerly towards the Porcupine mountains. It is six miles from the Copper to the forks of the river, and, excepting at the falls, we found the chamel practicable for walking all the way, and much the best route in low stages of water, but not practicable when the river is high. We encamped fifteen miles below the falls.

August 16.—We reached the lake at 10 a. m., and continued our way home.

August 17.—Met Mr. Aitkin, Mr. Warren, and Mr. Oakes, all with their clerks, voyageurs, boats, and goods, on their way back from Mackinac to their several trading posts.

August 18 to 25.—The observations on the coast of Lake Superior made on my return are embodied in the journal of the route up the lake.

We were detained by head winds at several points—one whole day at Grand island and another at Shelldrake river, thirty miles from Saut de Ste. Marie.

A severe northwest wind overtook us off the Pictured Rocks on the morning of the 23d, which soon increased to a gale, and made such a sea by the time we reached (the first harbor) the Grand Marais that we could not enter it. For the same reason we could not safely run the boat ashore or beach her, and were forced to run on, with the most tremendous seas of this lake, till we found a lee behind Whitefish Point a little before sunset. We could only keep up a light foresail from the morning, but ran, notwithstanding, a distance of ninety miles before night. But ours being a *small* Mackinac boat, we were in great danger in the afternoon of being overwhelmed by the seas.

We reached Fort Brady safely on the 25th of August, in the afternoon, having been absent eighty days, and travelled in that time a distance of two thousand eight hundred miles.

J. ALLEN, *Lieutenant 5th Infantry.*

23D CONGRESS.]

No. 580.

[1ST SESSION.]

ON THE PRINTING OF TACTICS FOR THE INSTRUCTION OF THE CAVALRY, ARTILLERY,
AND INFANTRY OF THE ARMY AND MILITIA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 19, 1834.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, having had under consideration the subject relative to the publication of the several systems of tactics for the instruction of the cavalry, artillery, and infantry, reported:

That they received from the general-in-chief of the army, in reply to certain inquiries touching the publication referred to, a letter which states that a board composed of officers of the army and militia, of which Major General Scott was president, assembled at Washington in 1829 for the purpose of preparing systems of instruction for the militia infantry and artillery; and also for the cavalry; that these systems were prepared and communicated to Congress, and, after duly considering them, they were approved, and an act passed on the 2d of March, 1829, directing the Secretary of War to cause the instructions for the artillery and infantry to be printed and distributed amongst the several States and Territories and in the District of Columbia for the use of the militia; but that, in consequence of a discussion which arose in the Senate relative to certain manœuvres, and in order to save time, the cavalry system was not then ordered to be printed. At that time five thousand of the artillery and sixty thousand of the infantry instructions were ordered and distributed.

The printing of the cavalry system has now been rendered indispensable by the formation of the regiment of dragoons, and it has accordingly been executed since the organization of that corps, under the direction of the War Department.

The two hundred and fifty copies required to supply the order of the department will render it necessary to provide for the payment of all the expenses of the undertaking, of which the principal, as will be seen by the estimate connected herewith, is the execution of the plates; these, the committee understand, are executed in the best manner. And as the five thousand additional copies proposed by the reported bill for the use of the militia will cost the government merely the additional price of presswork, paper, and binding, it seems to the committee that it would be well for the government to avail itself of the opportunity of extending the edition, when the effect will be that the cost of five thousand copies will be little more than that of two hundred and fifty.

The committee are of opinion that it would be useful to distribute among the States a system of cavalry instruction drawn from the most improved European works, and adapted to our own condition and military regulations. The distribution of cavalry arms and accoutrements among the States by the general government furnishes little advantage, unless instructions to teach their use, and calculated to introduce a uniform system, are sent with them. Productive as our country is in fine horses, and skilled as the people of the interior are in horsemanship, nothing is wanting to give the greatest efficiency to that portion of military strength in which the Union is capable of exerting its greatest power but a proper system of cavalry tactics. The committee refer to the letter of the general-in-chief, and estimate of printing, as a part of this report; and they report a bill.

HEADQUARTERS OF THE ARMY, *Washington, April 7, 1834.*

Sir: In reply to your inquiries whether any books containing instructions for the militia in reference to the tactics of infantry, artillery, and cavalry, have been adopted by the United States, I have to state that a board of officers, of whom General Scott was president, assembled in Washington in 1829 for the purpose of preparing a system of instruction for the militia infantry, a system of instruction for the militia

artillery, and also a system for the cavalry. These several systems were prepared, and communicated to Congress by the Secretary of War, and after duly considering them, they were approved, and an act was passed March 2, 1829, directing the Secretary of War to cause the instructions for the infantry and artillery to be printed and distributed among the several States and Territories and in the District of Columbia for the use of the militia. The cavalry system was not ordered to be printed, owing to some discussion which took place in the Senate in reference to certain manœuvres; when, to save time, it was proposed to leave out the cavalry for the present, and to print the infantry and artillery instructions. Congress ordered sixty thousand of the infantry instructions and five thousand of the artillery to be printed and distributed. The cavalry system is now printing for the use of the regiment of dragoons; and as it has been adopted, I would suggest the advantage of a number of copies being printed for the use of the militia—say five thousand copies, the same number as has been printed of the artillery instructions.

I have the honor to be, very respectfully, sir, your most obedient servant,

ALEX. MACOMB, *Major General*

HON. RICHARD M. JOHNSON, *Chairman of the Military Committee.*

Estimate for printing and binding 5,000 copies Cavalry and Light Infantry Tactics, 236 printed pages and 89 plates in each volume—to be printed on folio post paper, worth \$7 per ream.

B. Chambers, for engraving 89 steel plates, at \$20 each.....	\$1,780 00
For paper for and printing 445,000 impressions, at one cent each.....	4,450 00
Composition of 236 pages, 1,710 ems in a page, at \$1 13 each, (Congress prices).....	266 68
Presswork 1,180,000 pages, at 87½ cents for every 600, (Congress prices).....	1,293 41
171 reams folio post paper, at \$7 per ream.....	1,197 00
Binding 5,000 copies, at 40 cents—(low, it being very difficult on account of the unusual number of plates).....	2,000 00
	10,987 09

or \$2 20 per copy.

It will be perceived that \$8,427 of the \$10,987 has to be paid out for the plates and paper for printing the work—\$1 68 per volume; therefore the printer cannot make a great profit. He will make about the same profit that a printer for Congress would make on a bill of \$2,500 for printing done for that body.

JOHN C. RIVES.

[1ST SESSION.

ON GRANTING TO A RAILROAD COMPANY THE RIGHT OF WAY OVER THE GROUNDS OF THE ARMORY AT HARPER'S FERRY, VIRGINIA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES APRIL 30, 1834.

Mr. R. M. JOHNSON, from the Committee on Military Affairs, to whom the letters of Mr. Bruce, president, and Mr. Morell, engineer of the Winchester and Potomac Railroad Company, were referred by the Secretary of War, at the instance of the President of the United States, asking for the right of way through the property of the United States at or near Harper's Ferry, reported :

That the Winchester and Potomac railroad, in order to effect a suitable junction with the Baltimore and Ohio railroad at Harper's Ferry, must pass through property belonging to the United States at said place; and that such a work, penetrating a region among the richest in the Union in agricultural and mineral resources, and offering a route for its ready extension, will greatly promote the interests of the national armory by furnishing materials for its manufacture and supplies for workmen and others there employed; and, in the event of foreign invasion, might tend to strengthen the national arm by providing a rapid medium of transporting men and munitions of war from the interior of the country to the seaboard. But, independent of the reasons here advanced, the committee are of opinion, as this is a great public work which ought to have a fair encouragement, and as the right of way through the property of the United States at Harper's Ferry, which the company ask, can do no manner of injury to said property, but, on the contrary, greatly increase the value thereof, as also benefit the public in general, the committee therefore report a joint resolution granting to the Winchester and Potomac Company the right of way as asked for.

WAR DEPARTMENT, *April 18, 1834.*

SIR: I have the honor to transmit copies of letters received from Mr. Morell, the engineer, and Mr. Bruce, the president of the Winchester and Potomac Railroad Company, by which it will be seen that that company is desirous of running their road through the public grounds at Harper's Ferry. I am instructed by the President to inform the Committee on Military Affairs that, not feeling authorized to accede to the proposition made on this subject, the matter is referred to the consideration of the committee.

Very respectfully, your most obedient servant,

LEW. CASS.

HON. R. M. JOHNSON, *Chairman of the Committee on Military Affairs, House of Representatives.*

WINCHESTER, April 14, 1834.

SIR: A copy of a letter from Colonel Bomford, of the 29th ultimo, to General Rust, containing the decision of the Secretary of War upon the application of the Winchester and Potomac Railroad Company, made through General Rust, has been furnished me as agent of that company. From the terms of the decision I infer that the request of the company has not been presented to the War Department in a manner to make its nature fully understood.

By an act of the general assembly of Virginia, incorporating the Winchester and Potomac Railroad Company, they are authorized "to enter upon all lands and tenements through which they may judge it necessary to make the said railroad, and to lay out the same according to their pleasure, so that neither the dwelling-house, yard, garden, or castillage of any person be invaded *without his consent.*"

The Winchester and Potomac railroad cannot reach the Potomac at Harper's Ferry without passing through the yards, &c., of the occupants of the land held by the government at that place, and the request of the company is not that the War Department shall dispose of the public land, but that it shall not obstruct a great public improvement by withholding its consent to the passage of the road through the yards, &c., of the individuals occupying that ground.

It is contemplated to carry the road in the rear of the dwelling-houses, and to elevate it upon trusses to a height sufficient to admit at all places ready access from the front to the rear of all the lots either by men or horses; and it is believed, by adopting this mode of construction, that there is not a single occupant who would refuse his assent to the passage of the road through his grounds.

If, under this view of the subject, the Secretary of War shall feel authorized to give the consent required, he will please cause me to be notified of the same at as early a period as his convenience will permit.

I am, with great respect, your obedient servant,

WM. H. MORELL.

Hon. LEWIS CASS, *Secretary of War.*

WINCHESTER, APRIL 14, 1834.

SIR: It is, I believe, known to you that one of the contemplated routes for the Winchester railroad passes down the left bank of the Shenandoah, near Harper's Ferry, and partly through the United States property at that place. A sketch of the localities of the public property, likely to be affected by our undertaking, was forwarded through General Rust, I think, to Colonel Bomford, that the department might be possessed of such materials as would enable it to determine what facilities could be extended to a work which, no doubt, will be of great benefit to the army, and enhance the value of property belonging to the government in its vicinity. It has been stated to me, though unofficially, that, as head of the War Department, where I supposed the power to reside, you were disinclined to act on the subject of our request, and, supposing that it arose from an apprehension that our expectations might be greater than they really are, I have taken the liberty thus personally to address you.

Although the location of our road passes through several private yards and gardens, yet the holders of property, save one, have gratuitously conveyed us the right of way. A similar right we solicit of the federal government; and, in addition, the use of a portion of the public ground near the arsenal as a place of deposit for our trade, now occupied, in part, as a wood and lumber yard, out of the region of the workshops, and embracing no improvement of any value whatever. The spot referred to, near the arsenal, is particularly desirable to give efficiency to our operations, as it at once would accommodate the trade of the armory and village, give us easy access to the Chesapeake and Ohio canal, and promises a ready junction with the Baltimore and Ohio railroad. Penetrating the richest valley in Virginia, leading to inexhaustible beds of fine iron ore, from which some of the best metal used at the armory has been obtained, the commencement of a line of improvement, likely to be excelled by few in the accommodation of national trade and travel, I cannot doubt that the general government will extend encouragement to the work commensurate with its importance.

Would it be asking too much of the department to direct a personal examination into the localities and objects above alluded to? The engineer of the company will cheerfully communicate its views, and (excuse me if I should appear importunate) it would give me much pleasure to meet such agent next week, on the ground; Mr. Thomas, of the Baltimore company, having solicited an interview with me upon business of the two companies, on the 23d instant, at Harper's Ferry.

Should you feel indisposed to act decisively in this matter, and advise its reference to the slow action of Congress, I beg you will be kind enough to inform me early, as our desire is to have the subject settled as soon as possible, as well as to put the anxiety of the inhabitants of Harper's Ferry to rest about the final location of the work as to enable the company to decide, however reluctantly, upon occupying the right bank of the Shenandoah, by means of a bridge about a mile above its junction with the Potomac.

Allow me to hope that a work, fostered at its commencement by the general government, and stamped with the testimony of its national importance by the able engineer then employed, will receive the same liberality now advancing towards its completion.

I have the honor to be your most obedient servant,

JOHN BRUCE,

President of Winchester and Potomac Railroad Company.

Hon. SECRETARY OF WAR.

23D CONGRESS.]

No. 582.

[1ST SESSION.]

STATEMENT OF THE HISTORY AND IMPORTANCE OF THE MILITARY ACADEMY AT WEST POINT, NEW YORK, AND REASONS WHY IT SHOULD NOT BE ABOLISHED.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MAY 17, 1834.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred the subject of the Military Academy at West Point, reported:

The objections to the Military Academy at West Point which have been urged in Congress and in the public prints have recently assumed a more imposing character. The legislatures of two of the States of this confederacy have embodied them in formal resolutions, and transmitted them for the consideration and action of the national assembly. These resolutions question the expediency and the constitutionality of this institution, assert that "it has been wholly perverted from the designs of its founders, and that the best interests of the nation require that it should be abolished." The occasion and the circumstances seem to demand of the committee a deliberate investigation of the origin and history of the Military Academy, of its system of instruction and discipline, and of its effects upon the character of the army and of the nation. This investigation has been made, and the committee now present its results.

The general subject of military education appears to have engaged the thoughts of statesmen and legislators at an early day. They perceived that, although the ordinary, subordinate, and mechanical duties of a soldier and officer might be performed without especial training, the higher class of duties, and the capacity for command, could be understood and exercised only by those whose intellectual faculties had been carefully cultivated. They felt that the common interpretation of the axiom that "knowledge is power," significant and important as it is, was not its noblest and worthiest interpretation. Power over matter and over the minds of others is not the choicest gift of knowledge, enviable and glorious though it be; it is, in truth, a dangerous gift. But power over the mind of its possessor, purifying and elevating it, subduing all that is low or selfish to the authority of duty and virtue, this is the distinguishing, the kingly gift of knowledge. They felt, therefore, that the moral as well as the intellectual nature should be sedulously nurtured. They were convinced, also, that in a free State it was most impolitic and unsafe for the army to be separated in habits, interests, and feelings from the other orders of society; and they recognized in knowledge, which is in a great measure the result of mutual interchange of thoughts, the true principle of amalgamation. Many of them had been observers or partakers of the moral dangers of a military life; they were aware of the impoverished means of the members of the army, and of the probable inability of the country for a long period to provide more for them than a mere support; and they were, consequently, solicitous to impart to them knowledge, "in itself an economical possession," whose pursuits are inconsistent with and destroy the desire for indulgence in idle or vicious amusements. To these general considerations were added others growing out of our peculiar form of government and the sentiments and prepossessions of the people.

As an almost necessary consequence of the national experience during the war of the revolution, the subject of military education first presented itself in connexion with the organization and improvement of the militia. While they bore grateful testimony to the services and valor of those of their countrymen who upheld the standard of the United Colonies in the hours of darkest gloom, they could not be insensible that the struggle for independence would have been sooner triumphantly closed if those gallant men had been disciplined or had been led on by officers accomplished in the various branches of the art of war. They accorded a cordial tribute to the few brave spirits who devoted all the skill and science they had acquired in the "seven years war," which commenced in 1754, to the formation of military habits in the new levies which were raised in rapid succession during the whole progress of the contest. But they had before them the admissions of these officers and of their beloved commander that the difficulties of their perilous undertaking would have been greatly diminished if a knowledge of the theory and science of war had been more generally diffused through the army. A striking illustration of the justness of these views is contained in an official report made by General Knox, then Secretary of War, to the President, January 21, 1790. In this report the position is laid down that "all discussions on the subject of a powerful militia will result in one or other of the following principles:*

"1st. Either efficient institutions must be established for the military education of youth, and the knowledge acquired therein be diffused throughout the country by the means of rotation, or, 2d, the militia must be formed of substitutes, after the manner of the militia of Great Britain."

"If the United States possess the vigor of mind," says the Secretary, "to establish the first institution, it may reasonably be expected to produce the most unequivocal advantages; a glorious national spirit will be introduced, with its extensive train of political consequences."

It is not material to the purpose of the committee to give in detail the whole plan sketched in this State paper. The only provision immediately applicable to the present inquiry is that which required the young men from the age of eighteen to twenty years to be disciplined for thirty days successively in each year in camps of instruction, where, in addition to their military tuition, they were to receive lectures from the chaplains explanatory of the value of free governments, and of their dependence upon the knowledge and virtue of the youth of the country. A proposition similar to this, with the exception that the term of instruction was limited to six days instead of thirty, was submitted to the House of Representatives in 1821 by a member from Tennessee. And it may induce those who are inclined to adopt this course now to hesitate to be thus reminded how soon it was abandoned by its first projectors. The obvious objections arising from the expenditure of time and money, from the loss occasioned by the periodical abstraction of labor, and from the but too probable formation of licentious or indolent habits, seem to have been justly regarded as decisive.

In 1793 the establishment of a Military Academy is known to have been a favorite object of the Executive. In the annual message, dated the 3d of December of that year, General Washington suggests

* Penn. Daily Advertiser, February 3, 1790.

the inquiry,* "whether a material feature in the improvement" of the system of military defence "ought not to be to afford an opportunity for the study of those branches of the art which can scarcely ever be attained by practice alone."

Mr. Jefferson has informed us that when the preparation of this message was discussed in the Cabinet, the President mentioned a Military Academy as one of the topics which should be introduced, and that he himself raised the objection that there was no clause in the Constitution which warranted such an establishment; that the above sentence was nevertheless incorporated in the message, and was again the subject of special deliberation. The reply of Washington was, that he would not recommend anything prohibited by the Constitution; "but if it was doubtful, he was so impressed with the necessity of the measure, that he would refer it to Congress, and let them decide for themselves whether the Constitution authorized it or not." An authentic exposition of the views of Congress is contained in the act of the 7th of May, 1794, which provided for a corps of artilleryists and engineers, to consist of four battalions, to each of which eight cadets were to be attached; and made it the duty of the Secretary of War to procure, at the public expense, the necessary books, instruments, and apparatus, for the use and benefit of said corps. The result of his subsequent reflection upon the opinions of Washington himself, whose attachment to the national charter was too pure and firm to be perverted by any prepossessions for a particular object, is manifested by his declaration in December, 1796,† that "the desirableness of this institution had constantly increased with every new view he had taken of the subject." "The institution of a Military Academy," he observes in this annual communication to Congress, "is also recommended by cogent reasons. However pacific the general policy of a nation may be, it ought never to be without an adequate stock of military knowledge for emergencies. The first would impair the energy of its character, and both would hazard its safety, or expose it to greater evils when war could not be avoided. Besides that, war might not often depend upon its own choice. In proportion as the observance of pacific maxims might exempt a nation from the necessity of practicing the rules of the military art, it ought to be its care in preserving and transmitting, by proper establishments, the knowledge of that art. Whatever argument may be drawn from particular examples, superficially viewed, a thorough examination of the subject will evince that the art of war is extensive and complicated; that it demands much previous study; and that the possession of it in its most improved and perfect state is always of great moment to the security of a nation. This therefore ought to be a serious care of every government; and for this purpose an academy, where a regular course of instruction is given, is an obvious expedient, which different nations have successfully employed."

In 1798 Congress authorized the raising of an additional regiment of artilleryists and engineers, and increased the number of cadets to fifty-six. In July of the same year the President was empowered by another act to appoint four teachers of the arts and sciences necessary for the instruction of this corps.

Thus far the legislative proceedings had been in accordance with Executive recommendation, except that they did not provide for the collection of the regiments of artilleryists and engineers at one point, and the erection of buildings adapted to the purposes of education. But the principle upon which the institution as at present organized rests was fully sanctioned; a new grade was created in the army, to which young men were exclusively entitled to be admitted, and means were appropriated for their education in the science of war, that they might be fitted for stations of command. It was soon apparent, however, that something more was required to afford a fair opportunity for imparting systematic instruction. The subject seems to have been carefully investigated in 1800 by Mr. McHenry, then the head of the War Department, and his report was communicated to Congress by President Adams, on the 13th of January, with a special message, in which it was characterized as containing "matter in which the honor and safety of the country are deeply interested."‡

The committee invite the attention of the House to some extracts of this report, and of a supplemental one of the 31st of January, which are equally illustrative of the comprehensive and discriminating talent of their author, and of the beneficial consequences to be anticipated from the establishment of a Military Academy:

"No sentiment can be more just than this: that in proportion as the circumstances and policy of a people are opposed to the maintenance of a large military force, it is important that as much perfection as possible be given to that which may at any time exist.

"It is not, however, enough that the troops it may be deemed proper to maintain be rendered as perfect as possible in form, organization, and discipline; the dignity, the character to be supported, and the safety of the country further require that it should have military institutions capable of perpetuating the art of war, and of furnishing the means for forming a new and enlarged army fit for service in the shortest time possible, and at the least practicable expense to the State."

"Since, however, it seems to be agreed that we are not to keep on foot numerous forces, and it would be impossible on a sudden to extend to every essential point our fortifications, military science in its various branches ought to be cultivated with peculiar care in proper nurseries, so that a sufficient stock may always exist ready to be imparted and diffused to any extent, and a competent number of persons be prepared and qualified to act as engineers, and others as instructors to additional troops, which events may successively require to be raised. This will be to substitute the elements of an army to the thing itself, and will greatly tend to enable the government to dispense with a large body of standing forces, from the facility which it will give of procuring officers and forming soldiers promptly in all emergencies."

"To avoid great evils we must either have a respectable force always ready for service, or the means of preparing such a force with certainty and expedition. The latter, as most agreeable to the genius of our government and nation, is the object of the following propositions."

The laws which have been framed having proved inadequate, he adds, "to afford the requisite instruction to officers and others in the principles of war, the exercises it requires, and the sciences upon which they are founded," it is proposed "that the academy shall include four schools; one to be called the fundamental school, another the school of engineers and artilleryists, a third the school of cavalry and infantry, and a fourth the school of the navy. The fundamental school, it is supposed, will be the only one required for the first two years. It is designed to form in this engineers, (including geographical engineers,) miners, and officers for the artillery, cavalry, infantry, and navy; consequently, in this school are to be taught all the sciences necessary to a perfect knowledge of the different branches of the

† House Journal, 3d and 4th Congress, p. 610.

‡ State Papers, 1800, v. 1, pp. 229, 485.

military art." "These schools to be provided with the proper apparatus and instruments for philosophical and chemical experiments, for astronomical and nautical observations, and chemical experiments, for surveying, and such other processes as are requisite to the several branches of instruction." "Barracks and other proper buildings must be erected for the accommodation of the directors, professors, and students, and for the laboratories and other works to be carried on at the respective schools." These selections demonstrate that the conception the Secretary of War had formed of the true character of a national institution for military education was in very near accordance with the character of the one which has been long sustained by the beneficent and wise legislation of Congress. The whole report, he observes, "contemplates certain military schools as an essential mean, in conjunction with a small military establishment, to prepare for and perpetuate to the United States, at a very moderate expense, a body of scientific officers and engineers, adequate to any future emergency, qualified to discipline for the field in the shortest time the most extended armies, and to give the most decisive and useful effects to their operations."

These reports were referred to a committee of seven in the House of Representatives, who submitted a bill* creating a military academy, which, in the absence of the chairman, was postponed to a day beyond the close of the session, one member only of the committee voting for the postponement. The subject was revived at the next meeting of Congress. The Secretary of War was called upon by a resolution, dated December 22, 1801,† to lay before the House a statement of the existing military establishment, which was furnished accordingly on the 24th. Out of these proceedings grew the act of the 16th of March, 1802, by which the military peace establishment was determined. By this act the artilleryists and engineers were made to constitute two distinct corps. To one regiment of artillery forty cadets were attached, and to the corps of engineers ten cadets. The 27th section provided that the said corps, when organized, shall be stationed at West Point, in the State of New York, and shall constitute a military academy. It also provides that the senior engineer officer present shall be superintendent of the academy, and authorized the Secretary of War to procure, at the public expense, the necessary books, implements, and apparatus for the use and benefit of the institution. In the following year another act, dated 28th of February, 1803, empowered the President to appoint one teacher of the French language, and one teacher of drawing.

These acts afforded some of the desired facilities for developing the tendencies of the principle, which had been sanctioned by the previous acts of 1794 and 1798. At the expiration of six years, however, further legislation was considered necessary. And the attention of Congress was called to the subject by Mr. Jefferson in the following message, which evinces not only his deep interest in the institution, but that he no longer entertained the opinion of its unconstitutionality, which he expressed while a member of General Washington's cabinet in 1793.

"The scale on which the Military Academy at West Point was originally established is become too limited to furnish the number of well-instructed subjects in the different branches of artillery and engineering, which the public service calls for. The want of such characters is already sensibly felt, and will be increased with the enlargement of our plans of military preparation. The chief engineer having been instructed to consider the subject, and to propose an augmentation, which might render the establishment commensurate with the present circumstances of the country, has made his report, which I now transmit for the consideration of Congress. The plan, suggested by him, of removing the institution to this place is also worthy of attention. Besides the advantage of placing it under the immediate eye of the government, it may render its benefits common to the naval department, and will furnish opportunities of selecting, on better information, the characters most qualified to fulfil the duties which the public service may call for."‡

This message was referred to Messrs. Nicholas, of Virginia, Troup, of Georgia, Desha, of Kentucky, Upham, of Massachusetts, and Milner, of Pennsylvania. The names of some of these gentlemen are identified with republican principles, and they will not be suspected of having lost sight of or disregarded the strict requirements of the constitution. This committee reported a bill on the 12th of April, which added one hundred and fifty-six members to the corps of cadets, and which passed in the House by a vote of 95 to 16. It may be useful to note the fact, in this connexion, that propositions for removing the Military Academy to this city have been made at several different periods, since the date of this message of Mr. Jefferson, and have been uniformly and promptly negatived.

Under the succeeding administration, the welfare and interests of the institution were repeatedly recommended to the favorable consideration of Congress by the Executive. In his annual communication, dated December 5, 1810, Mr. Madison maintains its usefulness with great earnestness and power, and combats successfully a popular impression that such establishments were only suited to nations whose policy was, to a considerable extent, and by the necessity of their position, warlike.

"The corps of engineers, with the Military Academy, are entitled to the early attention of Congress." "But a revision of the law is recommended, principally with a view to a more enlarged cultivation and diffusion of the advantages of such institutions, by providing professorships for all the necessary branches of military instruction, and by the establishment of an additional academy at the seat of government or elsewhere. The means by which wars, as well for defence as offence, are now carried on, render these schools of the more scientific operations an indispensable part of every adequate system. Even among nations whose large standing armies and frequent wars afford every other opportunity of instruction, these establishments are found to be indispensable for the due attainment of the branches of military science, which require a regular course of study and experiment. In a country, happily without the other opportunities, seminaries where the elementary principles of the art of war can be taught without actual war, and without the expense of extensive and standing armies, have the precious advantage of uniting an essential preparation against external dangers, with a scrupulous regard to internal safety. In no other way, probably, can a provision of equal efficacy for the public defence be made at so little expense, or more consistently with the public liberty."§ It seems almost superfluous to remark that the recommendation for creating a new academy, as well as the whole tenor of this extract, is conclusive evidence that the constitutionality of these institutions was considered by Mr. Madison to be unquestionable. The maintenance of an unconstitutional establishment could not, with any propriety, be said to be consistent "with a scrupulous regard to internal safety," and "with public liberty." In 1811 Congress was again

* House Journal, 5th and 6th Congress, p. 634.

‡ House Journal, 1st session, 7th Congress, p. 56.

§ House Journal, 11th Congress, page 436.

reminded by the President "of the importance of these military seminaries, which, in every event, will form a valuable and frugal part of our military establishment."* Before the close of this session, the act of 29th of April, 1812, was passed, which declares that the Military Academy shall consist of the corps of engineers and the following professors and assistants, in addition to the teachers of French and of drawing already provided for, viz: a professor of experimental and natural philosophy, a professor of mathematics, a professor of the art of engineering, with an assistant for each. A chaplain was also to be appointed, and required to officiate as professor of geography, ethics, and history. The number of cadets was limited to 200; the prerequisites for admission, the term of study and service, and the rate of pay and emoluments were prescribed.

By the act of 3d March, 1815, the army was reduced to ten thousand men, a number deemed to be sufficiently large, in view of the segregation of this country from Europe, and the diminished strength of the Indian tribes. In his last message, dated 5th of December, 1815, Mr. Madison urged "an enlargement of the Military Academy, and the establishment of others in other sections of the Union. If experience has shown, in the recent splendid achievements of the militia, the value of this resource for public defence, it has shown also the importance of that skill in the use of arms, and that familiarity with the essential rules of discipline which cannot be expected from the regulations now in force."

During the sessions of Congress in 1815 and 1817, bills were introduced in the House of Representatives for creating additional military academies, which were not definitively acted upon. In 1821 the army was further reduced to six thousand men. The act of this year, and that of 1815, authorized the retaining of the corps of engineers, as then organized.

In the judgment of the committee these legislative enactments, in relation to the academy, considered in connexion with those in relation to the army, clearly indicate it to have been the settled policy of that day not to rely upon the rank and file of the army, who were enlisted for short periods, and could never therefore be thoroughly disciplined, but to educate officers, so that instructors would be always ready, competent to teach new levies, whenever changes in the political condition of the country might require them to be raised.

The committee will copy but one more of the complimentary notices of the Military Academy, which may be found in the annual communications to Congress of the distinguished statesmen who have since filled the executive department of the government. They will briefly advert to the proceedings of this House in 1821, as the result of them demonstrates most conclusively that the public sentiment, as expressed by the representatives of the people, was strongly and almost unanimously in its favor.

February 6, 1821, a resolution was introduced proposing an inquiry into the constitutionality of the Military Academy.

February 16, 1821, a motion was made to discontinue the pay and rations of the cadets, and discharge them from the academy and the service of the United States; a motion the certain effect of which would have been the abolition of the institution.

The opinion of the House upon the general subject, and upon these propositions, was distinctly pronounced in the vote upon the last, which was decided in the negative by a majority of eighty-nine.

It was subsequent to these proceedings in the popular branch of the government that Mr. Monroe, in his annual message in 1822, pronounced this strong eulogy upon the discipline and management of the academy: "Good order is preserved in it, and the youth are well instructed in every science connected with the great objects of the institution. They are also well trained and disciplined in the practical parts of the profession. It has always been found difficult to control the ardor inseparable from that early age, in such a manner as to give it a proper direction. The rights of manhood are too often claimed prematurely, in pressing which too far, the respect due to age, and the obedience necessary to a course of study and instruction in every such institution are lost sight of. The great object to be accomplished is, the restraint of that ardor by such wise regulation and government, as, by directing all the energies of the youthful mind to the attainment of useful knowledge, will keep it within a just subordination, and, at the same time, elevate it to the highest purposes. This object seems to be essentially obtained in this institution, and with great advantage to the Union.

"The Military Academy forms the basis, in regard to science, on which the military establishment rests. It furnishes annually, after due examination, and on the report of the academic staff, many well-informed youths, to fill the vacancies which occur in the several corps of the army, while others who retire to private life carry with them such attainments as, under the right reserved to the several States, to appoint the officers and to train the militia, will enable them, by affording a wider field for selection, to promote the great object of the power vested in Congress, of providing for the organizing, arming, and disciplining the militia."

The committee have now completed what may be termed the history of the opinions and action of the executive and legislative departments in relation to the academy. They have shown the correctly balanced mind of Washington passing from doubt to assured conviction, upon the question of its constitutionality; the philosophic mind of Jefferson, whose biases were ever against free constructions, relinquishing the confident opinion he had expressed in the negative upon the same question, and proposing an enlargement of the institution; the clearly discriminating mind of Madison, exerting its great powers to perpetuate the existing, and create new establishments, unshackled by a doubt of the constitutional authority of the government, and his example imitated by his friend and successor. They have shown the recognition by Congress of the soundness of the principle upon which these institutions are based, in the acts of 1794 and 1798; the distinct and not to be mistaken expression of the conviction of the same body, of their power, and of the expediency of exercising their power to establish a Military Academy, in the act of 1802; and this, too, after the project of such an institution had been fully developed in all its extent in the official report of 1800, and had been two years open for their consideration, and the consideration of their constituents; and lastly, they have shown an unbroken series of legislative enactments for the support and extension of the academy, running through a period of nearly twenty years, and the failure of the attempts which have been made to induce an opposite course of legislation. In the apprehension of the committee, it will be difficult to find, in the recorded history of the country, a question upon which public sentiment has been more fully and fairly tested, and has been more unanimous.

They proceed to give a brief sketch of the system of instruction and discipline. Under the existing regulations, the cadets are encamped in the months of July and August, during which period the instruc-

tion is exclusively military. As the candidates annually admitted are required to join the academy in June, they become, immediately upon their entrance, acquainted with the manual and drill of the soldier. The remaining ten months are passed at the institution, where not less than nine nor more than ten hours are daily devoted to study. The cadets are divided into four classes; the oldest is designated as No. 1, the youngest as No. 4. In accordance with the prescribed military course, the cadets of the 4th class are taught the school of the soldier; those of the 3d, the school of the company; those of the 2d, the school of the battalion; those of the 1st, the evolutions of the line. In the scientific course are included French, drawing, rhetoric, moral and political science, mathematics, natural philosophy, chemistry, mineralogy, geology; to these are added a course of artillery, engineering, and the science of war. A few words will illustrate the advantages to be derived from acquisitions in these different branches.

The French language and, next to that, the German are the great repositories of military learning; and he who would become an accomplished officer must be able to read intelligently and with profit the text books in at least the first of these languages. Drawing has been aptly denominated the only language by which visible objects can be described. The practice of this art not only improves the faculty for observation by rendering it more keen and exact, but is specially necessary in military surveys to obtain correct plans of ground for the purposes of war, on which shall be correctly designated the roads, rivers, woods, and ravines, with the prominent points of defence and command. Elementary mathematics comprises algebra, geometry, and trigonometry, which are the foundation of military surveying, and, with descriptive mensuration, constitute the basis of the art of fortification, and also of engineering in its various branches—in the construction of roads, bridges, and canals—and of a knowledge of machines and machinery. The higher branches of mathematics embrace analytical geometry, its application to the investigation of the conic sections, which is indispensable to a comprehensive understanding of the course of astronomy, and the differential and integral calculus, the agents by whose aid the obscure laws in every department of natural philosophy are made manifest. Chemical philosophy, mineralogy, and geology are means to afford a knowledge of the materials to be employed in civil or military engineering, of the places where they are to be found, and of the spots adapted for mining, sapping, or draining. The course of artillery is designed to make the pupils acquainted with the construction, machinery, and materials of pieces of ordnance, and their use in the field. The branches of rhetoric, of moral and political science, have been superinduced because, without some knowledge of them, the education of the cadets would be imperfect, and their association with intelligent men in society would be upon unequal terms.

In imparting this varied instruction, twenty-eight teachers are constantly and sedulously employed; and the facilities for its acquisition are a library, a philosophical and chemical apparatus, and a military laboratory, all of which it is desirable should be enlarged and improved.

During the first six months the studies are confined to the French language and the mathematics. At their expiration the members of the new class are examined. It is estimated that about one-quarter fail to pass this examination. The others are arranged in classes and sections, according to merit. There is thenceforth a free competition, and each must achieve for himself the success which may claim the bestowment of reward. An annual examination takes place in June before a board of visitors invited to attend by the Secretary of War. They who are found deficient, and whose deficiency is attributable to idleness or incapacity, are dismissed. Each cadet obtains rank in each branch of study according to his proficiency in that branch, ascertained from the weekly class reports and the results of the examinations before the academic board in January and the board of visitors in June. A strong stimulus is thus supplied for exertion in that department of study for which a cadet may have a peculiar aptitude; and this stimulus is not weakened by the consciousness that excellence in that department will be neutralized by imperfection in another. An additional incentive for intellectual effort is furnished in the regulation that the relative rank in the army shall be determined by the rank acquired at the academy.

The discipline to which the cadets are subject is a judicious combination of military and paternal rule. No unreasonable restraints or burdens are imposed. Weekly opportunities for explanation and defence are afforded, and two hundred marks of censure must be recorded and remain unexplained before a sentence of suspension can be pronounced.

The implied contract with parents to provide moral instruction for their children is fulfilled; and the obligation of the government is recognized to make the cadet, when in the field, a faithful representative of his countrymen, "by making him a good citizen and an honest man."

There are two provisions in the police of the academy which are worthy of especial notice. Their necessary tendency is to the formation of those habits of thought and of action which constitute distinctive features in a manly character. The first is that which limits the allowance of money by parents and guardians, and places the specified sum in the custody of the superintendent; and at the same time leaves the amount the cadet shall receive monthly in money dependent upon the system and economy of his expenditures. The second is that which imposes upon all the cadets, in succession, the duties of keeping their apartments in a state of perfect cleanliness and order, and of daily inspecting and reporting their condition. The wisdom of the first provision is attested by the collegiate axiom "that the stock of knowledge acquired is in the inverse ratio with the money spent." The wisdom of the second will be apparent, upon a moment's reflection upon the value of a habit of attention to the observance of neatness and regularity to those whom the various fortunes of their profession may place in circumstances in which their personal comfort and health will depend materially, if not entirely, upon themselves. The adoption of these regulations is strongly indicative of the desire of their framers to introduce an equality in dress and expenditure, and to foster a feeling of self-reliance and independence destructive of false pride and of all exclusive or aristocratic pretensions. This feeling of self-reliance enables the mind, free from unworthy external influences, to exert its energies and develop all its capacities, and to secure for its efforts their appropriate and legitimate reward.

After a careful and impartial consideration of the tendencies and operation of this system of instruction and discipline, the committee express their deliberate conviction that it would be difficult to devise one better adapted to form an able and accomplished officer, or combining more encouragements for intellectual and moral effort, in the adequate and enduring honors it promises, with stronger dissuaves from indolence and vice, in the certainty it holds out of immediate humiliation and punishment.

The committee enter now upon an examination of a part of the general subject referred to them, which has given occasion for much of the popular prejudice existing against the Military Academy—the rules by which the selection of candidates for admission is determined, connected with the prescribed qualifications. These qualifications, consisting in a knowledge of reading, writing, and arithmetic, (the acquisitions of pupils of ordinary capacity in the schools of lowest grade in our country,) cannot, in the

judgment of any, be deemed to be too high. On the contrary, they who have considered them in connexion with the positive advantages to be derived from the institution have regarded them as too low. And, at various periods, propositions have been made by different boards of visitors that there should be required, in addition, some acquaintance with the Latin language, and with some of the higher branches of mathematics. But these propositions have not induced a change, as both justice and policy equally demanded that the academy should be accessible to all grades of society. A yet stronger reason against innovation was found in the fact, familiar to those who are conversant with mental philosophy, or who have been observant of the mental habits of youth, that the capacity for successful effort may exist in a dormant state, from the absence of the incentives and the means of preparation for exertion, and be awakened to vigorous action by being brought in continued contact with these incentives and means.

Prior to 1817, various circumstances connected with the condition of the country and of the academy contributed to render admission to it far less an object of ambition than it has since become. The openings for the aspiring, before the commencement of the second war for independence, were indicated by the pacific policy of the country. The talents of the young were exerted in achieving pre-eminence in the legislative or judicial halls, or in acquiring the wealth to be gained in commercial intercourse with foreign lands. Undoubtedly military science and skill assumed more important aspects in the public mind during the progress of that war. But the sure means of obtaining this science and skill were not as perceptible in the then imperfect organization and instruction of the Military Academy as they have been since the year 1817, when a gentleman and a soldier of rare endowments, and of peculiar fitness for the station, was placed at its head and entrusted with its direction and superintendence. From that period the increasing reputation of the institution attracted towards it the public attention, and young men of ardent minds and strong powers sought a participation in its privileges and advantages. This general emulation imposed on the department, by which the selection of candidates was to be made, the necessity of adopting some general rule which should exclude the imputation of favoritism, and be equitable for all. One principle was admitted to be fundamental—that the doors of an institution which was sustained by the munificence of the country should be first opened to receive the sons of those who had bravely perilled, or who had nobly lost, their lives in its defence. Another principle which naturally suggested itself to the minds of those who wished that the army should be deservedly honored was, that uncommon intellectual ability should be a guarantee of success to an applicant. In the application of these principles, however, even upon the supposition that selections were limited to these two classes, there might often occur a serious practical difficulty. The very word *selection* implies a balancing of claims, and it is not to be supposed that any individual, however extensive his intercourse with society might have been, would be able, from his personal knowledge of candidates, to frame, in all cases, a just award. This difficulty increased as the number of admissions to be granted increased, and as the classes from which a selection was to be made were multiplied. To rely entirely upon the representations of individuals residing at a distance, and equally unknown with those whom they recommended, would be obviously most unsafe. It would be reposing confidence under circumstances which would not justify trust in ordinary matters of mere pecuniary interest. The representative branch of the government, including under this denomination the Senate and the House, afforded a means of obtaining the information prerequisite to a decision which promised an effectual security for the rights of all. No inference could be more legitimate than this, that they who were entrusted with the higher concerns of the people, and who were directly responsible to the people, would be safe counsellors in the administration of this interest.

From these and similar views originated, probably, the rule of selecting one cadet from each congressional district, and of allowing great weight to the recommendations of the representatives of the respective districts. This rule, while it afforded to the appointing power the means of judging correctly, or rather of avoiding error, was acceptable to the representatives and to their constituents. To the former, as it gave them opportunities of extending their personal influence, or of gratifying their feelings of personal regard. To the latter, who could thus present their claims with the more freedom and confidence through the medium which the Constitution and their own choice had provided. It is true that, in some instances, a representative might feel himself bound to present the names of several candidates, and that then the final decision must be made by the head of the department. But such instances are of rare occurrence, and it is believed the fact is susceptible of positive proof that, in a vast majority of cases, the selections have been determined by the representative of the district, or by the joint action of all the members of a delegation from the State. The necessary operation of this rule leaves but little patronage with the appointing power, and the danger of an abuse of the privilege allowed them by the representatives is guarded against, not only by their responsibility to their constituents, but by the sense of honor which will forbid them to mislead the judgment of him who relies upon them for the means of deciding rightly. It has been alleged, however, that under the influence of the motives which have been alluded to, (the extension of their personal interest and the gratification of personal regard,) the representatives have exerted themselves for the success of the wealthy or powerful. A complete vindication of a majority of those who have had an agency in the appointments which have been made for a long series of years is furnished in the facts that not more than one-fifteenth of any one class could have received, without this aid, more than a common English school education, and that a still smaller number of the officers of the army possess any income or means of support beyond their regular pay and emoluments. It seems to the committee that this objection underrates the intelligence and moral feeling of both representatives and people. The sentiments of gratitude and veneration for the worthies of the revolution have not so far subsided, nor the appreciation of uncommon mental power become so rare in any community that the overlooking, by a representative or an officer of the government, of a son of the former, or the possessor of the latter, in favor of one whose only recommendations were wealth or influence with a party, would not draw upon him their distrust and contempt. The committee have given this answer to the imputation that undue preference has been shown for the wealthy, because the truth warranted them in so doing. But they by no means admit that where there are natural endowments and capacities of a high order, the possession of wealth would be a proper ground of exclusion from the academy. It should be open to all.

The committee will admit for the moment that the objections of exclusiveness, favoritism, and aristocracy are well founded. The question immediately occurs, will these objections be removed by abolishing the Military Academy? While the academy exists the rank of cadet is the lowest grade in the army; if it be discontinued, the rank of second lieutenant will be the lowest. The change is simple and apparently unimportant, the consequences are worthy of grave consideration.

The average number of vacancies in the army for the last ten years is 25. The average number of admissions to the academy for the same period is 119. The opportunities for entering the army, therefore,

will be diminished in the ratio of 119 to 25. This certainly will not render it less exclusive. But it is said it will be more popular, because the vacancies will be filled by selections from the community at large. Do not the wealthy and those possessing political influence constitute a part of the community? and will not the appointing power have the same inducements for preferring their applications for lieutenants' commissions that he now has for preferring their applications for cadets' warrants? Will not these applications be made through the representatives, and will there not be the same reasons for relying upon their recommendations? How, then, will the opportunities for favoritism be lessened? On the other hand, the vacancies which annually occur are now supplied by those graduates of the academy who have acquired distinction by their conduct and attainments, and are prepared to undertake the higher duties of their profession. If these vacancies are to be filled from the mass of our citizens, there will be added to the army each year twenty-five lieutenants, to whom every branch of duty and service will be new, and who, after four years, instead of being familiar with the theory, science, and practice of war, will be very slightly and imperfectly acquainted with the two first, and only tolerably proficient in the last. And, to accomplish this result, a considerable pecuniary expenditure must be made. The pay of the twenty-five lieutenants for the four years will be \$75,800; that of the twenty-five cadets for the same time, including everything for their education, will be \$46,200. The difference (\$29,600) is the amount the nation will be required to pay for a change in the military establishment, which will deprive it of its great ornaments of talent, learning, and skill, and effect a general deterioration in the character of the officers and the army. The military and scientific information diffused throughout the country by those who pass two or three years at the academy, but do not complete the course, or who complete the course, but do not enter the army, is considered, in this estimate, to be a fair equivalent for the expense of their education, as this information is, or may be, applied to perfecting the discipline of the militia and the construction of works of improvement.

The result to which the committee have arrived is, that the imputation of favoritism is one which is incident to all governmental appointments; that it will not be avoided by making the grade of second lieutenant the grade of admission in place of that of cadet; and that it is as carefully guarded against by the existing rules for selection as it can well be; that it is equally unwise and impolitic to dispense with that system of previous trial to which candidates for the army are now subjected, by which the incompetent are excluded. If it be dispensed with, persons will be advanced to important posts who can never be distinguished, and who will outrank others of far more capacity to be useful and eminent. The military profession will soon cease to excite the ambition of the aspiring and gifted, the moral force of the army will be diminished, and its physical force may then prove too feeble for its defence against internal or foreign foes.

It is natural to remark, in this connexion, that the same system, in all its essential features, exists in the Navy Department with regard to the admission and education of midshipmen. The regulations of that service prescribe that these young men, who are selected by the Secretary of the Navy, shall spend five years on shipboard, during which period of probation they shall be instructed by the chaplains or schoolmasters; and that they shall pass an examination by a board of officers before they can be candidates for the rank of lieutenants. Here, then, is a body of young men, who are selected by an individual, educated at the public expense, liable to be dismissed if they fail at an examination through incapacity or idleness, and who alone can be advanced to the posts of lieutenants. Is there not obviously the same reason for the charges of exclusiveness and favoritism as there is in the case of cadets? The only difference is, that a ship is the school for the one; the academy at West Point for the other. The consequence of this difference is that the former are less thoroughly and extensively taught than the latter. It cannot surely be that the very perfection of the military institution, and the many advantages it combines and holds out, occasion the objections to it and the efforts that are made to render it unpopular in the country. The impulse of true patriotism would be to extend to the navy similar means of improvement with those enjoyed by the army; to substitute for the mere theoretical teaching in navigation young midshipmen derive from their schoolmasters, and the practical acquaintance with nautical instruments they are obliged to seek from the lieutenants or older midshipmen, a naval school—a school in which they may acquire a "competent knowledge even of the art of ship-building, the higher mathematics, and astronomy; the literature which can place our officers on a level of polished education with the officers of other maritime nations; the knowledge of the laws, municipal and national; the acquaintance with the principles of honor and justice" which constitute the distinction of "the warrior patriot."

The committee are inclined to believe that not a small part of the unfriendly feeling which has been manifested towards the Military Academy is attributable to a vague impression that it is maintained at a heavy and unreasonably expenditure. In refutation of this impression they submit a statement of the expenses of this institution for successive periods:

From 1802 to 1821 the annual cost to the country for each cadet was	\$555 50
From 1817 to 1821 it was	525 25
From 1823 to 1833 it was	421 55

These sums include all the expenditures of every kind; and the statement exhibits the singular fact that the expenditures have sensibly diminished, while the means and advantages for education have increased—a fact which demonstrates the strict observance of a system of rigid economy and supervision. The monthly pay of the cadets, which forms a part of the above amounts, is \$28 20; from this deductions are made, in conformity with the regulations, for boarding, clothing, books, &c.; the balance, which the cadet may receive in cash, seldom exceeds \$4 50 per month. This matter was carefully scrutinized by a sub-committee of the board of visitors in 1824, of which the late Mr. Johnston, of Louisiana, was chairman. And few, probably, will dissent from their conclusion "that while care and prudence will enable a cadet, by the provision made for him, to meet his necessary expenses, nothing but great exactness will produce this result; and the pay and emoluments could not be reduced without very serious injury to the institution."

Remote as is our native land from the military governments of Europe, and distinct as has ever been its policy, it is evident, from the extract which has been copied from the annual message of Washington, in 1796, that these circumstances did not, in his view, justify remissness in preparing for war. The new governments which have sprung up in this hemisphere since that date render this duty of preparation far more obligatory. It is our interest as well as duty to be equally ready with any other nation for active warfare; and we may learn wherein they are superior, and at the same time discover the fallacy of a very common impression that the emergencies of war can be always met by brave men, although undisciplined,

by a brief and rapid notice of the establishments existing in other countries for the education of soldiers and officers.

In 1812 the Duke of York issued a general order for the formation of regimental schools, to be conducted upon military principles, and designed for the instruction of non-commissioned officers. In 1801 a government was appointed for the Royal Military College, which had been then two years in existence, and which was intended for youths upon their entrance into the service, and for officers who had attained to manhood and desired to qualify themselves for staff appointments.*

The first department was to be filled by selections from the following classes:

1. The sons of officers of all ranks, whether of the land or sea service, who had died in the service, leaving their families in pecuniary distress.

2. Sons of all officers of the army above the rank of subalterns, upon payment of annual stipends varying in amount from £30 to £70.

3. Orphan sons of officers who had not left their families in pecuniary distress, upon an annual payment of £125.

The qualifications exacted of those who had been classically educated were, a knowledge of the four elementary rules of arithmetic, with a power of translating Virgil, Cæsar, &c.; and of others was required a knowledge of grammar, orthography, and arithmetic as far as vulgar and decimal fractions. The rank of the members of this department, on leaving the college, was to be regulated by the result of the examination and the merit-rolls of conduct. The course of study prescribed for them in mathematics rose from simple arithmetic, through algebra, geometry, &c., to the conic sections; in fortification, it comprehended the three systems of Vauban, the construction of field-works, and the science of attack and defence; in military drawing, it included the art of copying plans and of delineating the military survey of a country; and in the languages, it embraced the French, German, and Latin. To these were added a miscellaneous course of geography, ancient and modern history, and of natural and experimental philosophy. A commission could be obtained either by proficiency in the whole course of mathematics, fortification, and military drawing, with a tolerable acquaintance with the languages, or by public examination in any three of the branches of Latin, German, French, and general history, supported by certain designated attainments in geometry, drawing, and fortification.

The members of the senior department in this college were required to be twenty-one years of age, to have served three years abroad or four years at home, and to pay for their instruction thirty guineas per annum. Their studies were distinguished from those of the junior department only by being more extensive. The annual charge to the country for the maintenance of this college is \$115,200.

Of the practical school for engineers at Chatham, and the Royal Academy for artillery and engineers at Woolwich, only this cursory mention can be made.

In France the polytechnic school, which has taken the place of the first school for engineers, established at Mézières in 1746, is designed to communicate such theoretical knowledge as is necessary in common to the civil and military engineers, the officers of artillery, the constructors of ships, the engineers of mines, and the topographical engineers. All candidates are admitted who pass a public examination in arithmetic, geometry, algebra, trigonometry, and statics,* who have been members of the third Latin class in one of the Lycées, and are able to draw, and to speak and write their native language with purity and correctness. At the expiration of two years the pupils choose the branch of the public service to which they will be attached; they then repair to the school in which the appropriate studies for that branch are pursued, called a school of application.

The schools of application for civil engineers, for the topographical corps, and the engineers of mines, are at Paris. The students in the first witness the construction of public works during the spring and summer. In the winter they make projets of roads, canals, &c., estimates of their cost, and memoirs on the progress of their construction. The students in the second are provided with a large cabinet of minerals, and those in the third with a collection of maps and topographical memoirs. The schools for the military engineers and the students of artillery are at Metz, where they have constantly before them fortifications of great strength and framed with great skill; an arsenal of construction, a foundry, manufactory of powder, and parks of artillery. The term of instruction in each of these schools is two years, at the close of which the pupils are detailed to fill vacancies in the corps for which they have been educated. The number of dismissals within the four years is in the proportion of 37 to 100.

In Hanover, Sweden, Prussia, and Russia, similar establishments for military education exist, and are conducted upon a larger or less extended scale.

If nations, warlike in their temperament and habits, surrounded with fortifications and well furnished repositories of all the implements of war, incur the expense of these primary schools for their soldiers and officers, does not the conviction strike every mind irresistibly that they must be much more essential in a republic like this, whose policy and the pursuits of whose people are pacific; where there are but few fortifications, and where the armories and arsenals contain only the most common instruments of warfare, and where the expense of maintaining these institutions is comparatively unimportant? Who does not perceive, who has not learned from the history of his country, how unequal must be the contest with an enemy led on by officers who have been thus carefully formed for command if the nation have no other defenders than its undisciplined militia? Who would not prefer to sustain a military academy in each State of the Union rather than witness the blood of his brave countrymen fruitlessly shed? The praise of heroic valor will not compensate for the loss of the dead, or the sorrows of their friends who survive, or the humiliation of defeat. It would be legislative cruelty to break up an institution in which officers can be formed who will guide triumphantly our brave citizens to combat upon equal terms with the well-trained troops of a foreign power. And if we would be secure from insult and invasion, we shall cherish this institution as the surest means of being always in such a state of preparation as will deter an enemy from both by requiring him to maintain an army and apparatus too vast and expensive to be long supported.

Our whole army possesses now far more of the public respect and confidence than it did not many years since. It is the great distinction of the academy at West Point that it has contributed largely and effectually to this elevation of the character of the military establishment. And it has accomplished a nobler service by sending forth numbers annually competent to superintend the construction of those chains of internal improvement which are to be the eternal bonds of our national Union. The railroads which connect the capital of Massachusetts with the "heart" of the State and with important harbors in

* Dupin's Military View, vol. 1, p. 52.

Rhode Island and Connecticut; the improved facilities of communication afforded to the whole country by the Susquehanna and Baltimore and Baltimore and Ohio railroads, and the similar construction between Charleston and Hamburg; the new roads which have augmented the wealth of the Territories of Michigan and Arkansas by opening new channels of transportation, and the securities extended to the internal and foreign commerce of the nation by important harbor improvements upon the shores of the lakes and upon the sea-coast—these are some of the enduring memorials of the usefulness of the Military Academy, and of the returns it has made for the care and time, and money which have been bestowed upon it. Other testimonials and other rewards have been accorded to it by the literary institutions of our land which have invited its graduates to fill important professorships. The president and one of the professors in the College of Louisiana; the president of Hamilton College, and the vice-president and the professor of mathematics in Kenyon College, in Ohio; the professors of mathematics in the College of Geneva and in the University of Nashville; the professors of chemistry in the Universities of Pennsylvania and Virginia have all been members of the academy, and have resigned their commissions in the army upon receiving these honorable appointments; and very recently two second lieutenants have accepted vacant chairs in the University of New York. No words can demonstrate with one-half the force and impressiveness the beneficial influences of the Military Academy upon the characters of its members and upon the national reputation. Within the short period of thirty years this institution, whose own high reputation is now sustained by professors all of whom, with but one exception, have been educated within its walls, has not only furnished to the army gallant and accomplished officers and to the country skilful engineers, but has sent forth principals and professors to ornament and sustain colleges and literary seminaries. To this list of those who have been thus distinguished might be added the name of Ritner, who graduated with a highly respectable rank, in possession of his comrades' affection and confidence, and became the professor of civil and topographical engineering in Washington College, in Pennsylvania, and died at the moment when the prospect of serving his native State dawned upon him, and when his native State began to rejoice in the anticipation of his usefulness and success.

The committee beg leave to remark, in concluding their report, that if to owe its origin to Washington, the father of his country; to have been sustained and fostered by the countenance and support of other framers of our Constitution and their associates in the public service; if to have redeemed and elevated the character of the army and increased the national renown; if to have multiplied and cemented the bonds of union; if to have proved itself clear of having afforded just cause for the imputations of exclusiveness and favoritism; if these circumstances can entitle any institution to the continued liberal aid of the national legislature, the Military Academy at West Point will not be deemed to have perverted the designs of its founders, nor will it be thought that the public interest requires that it should be abolished. The national legislature will still cherish it by a parental and judicious legislation, adapted to render it more perfect and to increase its capacity and facilities for accomplishing in their fullest extent the purposes of its creation.

Resolved, That the committee be discharged from the further consideration of this subject.

ON GRANTING SUITABLE TESTIMONIALS TO MAJOR GEORGE CROGHAN, AND THE OFFICERS AND SOLDIERS UNDER HIS COMMAND, FOR THEIR GALLANTRY IN DEFENDING FORT SANDUSKY IN 1813.

COMMUNICATED TO THE SENATE JUNE 18, 1834.

Mr. PRESTON, from the Committee on Military Affairs, to whom was referred a resolution "that the Committee on Military Affairs be instructed to inquire into the expediency of giving suitable testimonials to Major George Croghan, (now a colonel in the army of the United States,) and to the officers and soldiers under his command, for their gallantry and good conduct in defending Fort Sandusky against the attack by the combined forces of British and Indians during the last war," reported:

That few events during the late war are entitled to more honorable mention than the defence of Fort Stephenson on the 1st and 2d of August, 1813, whether we consider the boldness of the design, the gallantry of the execution, or the important consequences which resulted from its success. The course of the campaign on the northwestern frontier up to that period had thrown the main body of the American army under the immediate command of General Harrison in the rear of Fort Stephenson, and rendered a still further retreat into the interior not improbable. The commanding general, upon assuming his position at Seneca town, left Fort Stephenson under the command of Major Croghan, with orders that if the enemy approached with cannon he should relinquish the post, and fall back upon the main army at Seneca town, where the general had established his headquarters. Fort Stephenson was at that time in a perfectly defenceless state. It was a slight stockade, planked with block-houses, without a ditch or any other exterior defence, to be defended by between 130 and 140 effective men, provided with one six-pounder, having seven charges of powder and a keg of lead, and the ammunition amounting to forty rounds of musket cartridges. Upon receiving the command, Colonel Croghan addressed himself with great assiduity to such preparations as would enable him to withstand an attack; with an insufficient and accidental supply of tools and implements, he surrounded the fort by a ditch, cut down and removed the forest to musket-shot distance from the fort, and made such repairs as were absolutely necessary upon the stockade.

These improvements, pushed on with unceasing diligence and labor, were just completed when intelligence was received at headquarters that the enemy had raised the siege of Fort Meigs, and that General Proctor, at the head of his British and Indian forces, and provided with cannon and howitzers, was approaching the American stations on Sandusky. This state of things seemed to make the contingency upon which Fort Stephenson was to be abandoned, and accordingly an order from the commander-in-chief was sent to Colonel Croghan directing him to fall back upon Seneca town. Upon consultation with his officers, Colonel Croghan came to the conclusion that the fort could be held out, and that it was proper to make the effort, notwithstanding the orders. Whereupon the commanding general superseded him, and ordered him to headquarters; while there the commanding general became satisfied of the propriety of Colonel Croghan's course so far that he was permitted to resume his command at the fort. Soon after his return the enemy assembled, and made the usual formal summons to surrender, and the flag-officer received the usual defiance. This conference being finished, the British forthwith commenced the attack. A cannonade was opened from the gunboats and from some pieces stationed on the shore, and the firing was continued with but little cessation for nearly forty hours. The smallness of the force in the fort rendered a sortie impracticable, and the scarceness of ammunition prevented a return of the enemy's fire during this period. There is perhaps no higher test of gallantry than this sustained inactivity under an attack. At length, about six o'clock on the evening of the 2d of August, the welcome sound of a bugle gave notice to the besieged that the British were preparing for the assault, and they were seen advancing in several columns under cover of a fire from their artillery. The first attempt was made upon the north-east front of the fort defended by Lieutenant Johnston, to whose assistance Ensign Duncan promptly hastened, and by their united efforts the enemy's column, led on by Lieutenant Colonel Short, was repulsed with loss. He, however, with great gallantry, recovered the assault on the northwestern angle defended by Lieutenant Meek and Ensign Ship. These officers, in obedience to the earnest injunctions of Colonel Croghan, reserved their fire until the enemy approached within thirty feet, and then poured it upon him with deadly aim; for a moment he recoiled, but recovering himself with a gallant effort, he threw himself into the ditch. The six-pounder had been placed in a position to rake the ditch, masked, and heavily charged with slugs beaten out of the pig of lead. It was under the command of Sergeant Weaver, and manned by five or six Pittsburg and Petersburg volunteers. At the instant that the ditch was filled with the enemy this piece was discharged upon them, and, raking its whole extent with leaden slugs, effected the most fatal slaughter; a second discharge of this piece, accompanied with a fire of musketry, crowded the ditch with killed and wounded, and rendered further contest hopeless. In the meantime, Lieutenant Colonel Warburton, who, at the head of a large party of the enemy, had made a circuit around the fort, attacked it with great spirit on the southeast front. He was repelled by the gallantry of Lieutenant Baylor, assisted by Ensign Duncan, to whom had been assigned the duty, most gallantly discharged by him, of affording relief at every point which might be hard pressed. Their united efforts drove back Colonel Warburton and his two hundred troops in confusion at the moment that the second discharge of the six-pounder had so fatally terminated the assault on the other side of the fort. Any further attempt upon it was manifestly hopeless, and the British general drew off his forces, leaving behind him near one hundred white men killed and wounded. Amongst the killed was Lieutenant Colonel Short, and six other officers. The number of regular troops brought to the attack of Fort Stephenson was about five hundred. It is more difficult to estimate the Indian force, the British and American accounts varying their number from two hundred to several thousand. That their numbers must have been very considerable appears from the fact that the enterprise was undertaken in obedience to their wishes, General Proctor having been compelled, contrary to his own judgment, to indulge their desire of taking the scalps and plunder at Sandusky; and, during the conference, the British flag-officer assured Ensign Ship that the Indian force was so large that, in the event of the capture of the fort, they would be beyond the control of the British regulars. It appears, therefore, that about one hundred and thirty effective men, under Colonel Croghan, successfully defended a slight stockade fort, badly provided with ammunition, against more than three times the number of British regulars, with a multitude of Indians amply provided with all the materiel of an army. In such an achievement it is obvious that all to whom the defence of the fort was intrusted were called upon for their utmost exertions; and accordingly, with a single exception, both officers and men displayed throughout the highest gallantry. The conduct of Lieutenants Johnston, Meeks, Baylor, Ensigns Duncan and Ship, was such as to elicit the warmest encomiums from their gallant commander. By the successful defence of Fort Stephenson the plan and purposes of the British campaign were wholly frustrated. General Proctor, with a reinforcement of all the effective strength of the 41st regiment, and a vast accession of Indian force, had left Sandwich, on the 20th July, with high and not unreasonable hopes of destroying the American establishments and stores upon the lake, so as to obtain complete command of it. His main objects were the possession of the supplies at Cleveland and the destruction of the naval preparations at Erie, the successful accomplishment of which would have lost to our country the glory and advantage of Perry's victory. The Baron de Rothenburg, writing to General Proctor, says, in reference to the affair at Sandusky, "I sincerely lament that you have been compelled by your Indian force to undertake an expedition contrary to your own judgment, and, ultimately, with inadequate numbers, the result of which has been so disastrous." The possession, too, by the enemy, of the southern shore of the lake would have exposed our northwestern frontier to the usual calamities of Indian excursions.

Nor is it at all improbable that, in the event of the fall of Sandusky, the army under General Harrison would have been under the necessity of falling back upon the interior, pressed by superior numbers, and compelled to maintain a defensive position, instead of being able to push on in that brilliant career which was terminated by the battle of the Thames. These results, to be sure, are but conjectural; they are, however, certainly not improbable.

The committee, upon a view of the whole matter, have come to the conclusion that, whether we consider the bold and hazardous responsibility assumed in the defence of the fort, the courage and good conduct which rendered that defence successful, or its important results, either in evil avoided or good attained, those who participated in it deserve the gratitude of their country and some testimonial from Congress.

23d CONGRESS.]

No. 584.

[1st SESSION.]

ON AN APPLICATION FOR THE ERECTION OF A MONUMENT TO THE MEMORY OF CAPTAIN NATHAN HALE, OF THE REVOLUTION.

COMMUNICATED TO THE SENATE JUNE 27, 1834.

Mr. BENTON, from the Committee on Military Affairs, to whom was referred the memorial of sundry inhabitants of Coventry, in the county of Tolland, in the State of Connecticut, praying that a monument may be erected to the memory of Captain Nathan Hale, reported:

That they have duly examined and considered the memorial referred to them, and from the facts therein set forth, aided by historical records and traditionary details, they are fully and clearly of opinion that Captain Hale is justly entitled to the grateful recollection of his country, and to any reward or memorial which has ever been conferred under the like circumstances.

The perilous service in which Captain Hale risked and lost his life was one which he accepted from patriotic motives alone, and in compliance with the wish and request of General Washington. No mercenary consideration mingled with or alloyed in the slightest degree the generous and noble feeling by which he was actuated. If, after having so successfully accomplished the object of his enterprise, he had escaped the personal danger to himself, and returned in safety to the camp of the American army, there can be no doubt but that he would have received the high reward most acceptable to his feelings and principles, that of public approbation and promotion in the line of his profession. If now alive, he would be entitled to a place on the list of revolutionary pensioners; but death—a death more painful to the feelings of a gallant soldier, from its manner, than mere loss of life could ever be—cut him off from all these advantages at the very moment of the successful completion of his enterprise; and, in the long course of half a century which has since elapsed, no evidence of national gratitude or of national recollection has been extended to his memory.

The committee fully appreciate the laudable motives and feelings which have impelled the memorialists to ask of Congress the erection of a monument in honor of Captain Hale; but they are not aware that a mark of national respect, of that kind, has been heretofore conferred under the like circumstances, and, for the present, forbear to recommend it, and submit the following resolution:

Resolved, That the memorial aforesaid, and this report, be printed, and that the committee be discharged from the further consideration thereof.

MEMORIAL OF SUNDRY INHABITANTS OF COVENTRY, TOLLAND COUNTY, CONNECTICUT, PRAYING THAT A MONUMENT MAY BE ERECTED TO THE MEMORY OF CAPTAIN NATHAN HALE.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

The memorial of sundry inhabitants of the town of Coventry, in Tolland county, State of Connecticut, respectfully sheweth: That Captain Nathan Hale, an inhabitant of said town of Coventry, at the age of twenty, was among the first to rally around the standard of his country in the year 1775. With the troops from Connecticut he marched to Boston, and soon received a captain's commission in the regiment commanded by Colonel Webb. After the American army retreated from Long Island in the following year, General Washington, being desirous of obtaining accurate information as to the situation and designs of the British force, designated Captain Hale for that service. It was a field in which no laurels could be won, but it was a post of danger, and Hale readily accepted it.

He left Harlem heights, and had to proceed to Norwalk before he could procure a passage across the sound. There he left his only companion and his uniform, assumed the garb of a private citizen, and the character of a schoolmaster. On his arrival on Long island he found that the British army had gone to New York. He followed them, and had almost completed his mission, and had nearly reached his quarters, when he was stopped by the picket guard of the enemy between the lines of the two armies. He was soon recognized by one of his former friends and relations, who basely betrayed him. He was immediately hung as a spy, and a flag was sent to our lines to proclaim the fact.

Thus fell Captain Nathan Hale at the age of twenty-one years, lamenting that he had but one life to lose for his country.

We cannot but compare his character and fate with that of Major Andre. Both were young, both well educated and highly accomplished, both enjoying the confidence of their commander, both selected for a most important but dangerous expedition, although Hale was not to contaminate himself with a traitor; both had executed their missions, and had nearly arrived at their respective quarters, both were executed as spies, and both died like heroes.

But here the parallel ends. The one was tried by a court-martial composed of men as brave as himself; their sentence was carefully reviewed and solemnly sanctioned by the commander-in-chief. The other was executed almost instantaneously by an order from the British general. The one was surrounded by sympathizing foes, who did all that duty would permit to alleviate the sufferings of the unhappy prisoner, and bore a willing testimony to the courage with which he met his doom. The other was not permitted to inform his friends of his fate, and communicate to them his last requests. It is said his keepers were not willing it should be known how bravely a rebel could die; and even the consolations of religion were denied him, and he was refused the attendance of the chaplain. And since their deaths, how different is the space they occupy in public view! The name of Andre has been celebrated by the poet and the historian on both sides of the ocean. Locks of his hair are preserved as relics even in our own country. Pilgrimages have been made to his grave, and, at last, his bones have been transported across the Atlantic to his native land, where, it is said, a proud monument has been erected to his memory, and his family have received pensions from their government. But the name of Hale is almost as unknown as the place of

his interment; and when a few remaining friends have passed away, it is to be feared that his services, as well as his name, will be forgotten.

His immediate connexions, who best knew his worth and most mourned his loss, believing that he died a Christian patriot, have not called upon his country to notice his loss, nor do they now. They content themselves with the assurance that his reward is in heaven, and his record is on high. But his neighbors and fellow-citizens, seeing the bounty of the country so liberally bestowed upon the survivors of the revolutionary army, can no longer forbear to present these facts to the consideration of the representatives of the people, with the hope that the services and sufferings of this youthful martyr to liberty may be thought worthy the attention of the legislature.

And they would respectfully suggest whether a plain monument, erected near the sepulchre of his father, in the place of his nativity, commemorative of his services and of his country's gratitude, would not be a tribute due to his memory. This they ask, or that your honorable body would, in some other way, show that this republic is not insensible to the value of the sacrifice made by this devoted youth.

All which is respectfully submitted.

COVENTRY, *December 17, 1833.*

23^D CONGRESS.]

No. 585.

[2^D SESSION.]

ANNUAL REPORT OF THE SECRETARY OF WAR, SHOWING THE CONDITION OF THAT DEPARTMENT IN 1834.

COMMUNICATED TO CONGRESS, WITH THE PRESIDENT'S ANNUAL MESSAGE, DECEMBER 2, 1834.

WAR DEPARTMENT, *November 27, 1834.*

SIR: The annual period for submitting to you a statement of the proceedings of this department having arrived, I have the honor, in conformity with your instructions, to lay before you an abstract of its operations, together with the reports and estimates from the various bureaus, exhibiting the condition of those branches of the public service connected with its administration.

Since my last annual report no military movement of any importance, with the exception of the expedition of the regiment of dragoons, has been rendered necessary. The reports and information which have reached the department respecting the situation of the army are highly gratifying. In its discipline, its moral character, and the general performance of its duties, the government and the country have every reason to be satisfied with its condition and prospects. As a safeguard for the frontiers, as a school of practical instruction, as a depository of military information, and as the means of preparing and providing in peace for the exigencies of war, the present military establishment has fully answered the objects of its organization and support. And it is but an act of justice to state that in all the essential requisites of capacity and conduct the officers of the American army do honor to themselves and their country.

It is known to you that some of the western tribes of Indians, roaming through the extensive prairies west of Arkansas and Missouri, particularly the Comanches and Kiowas, have, for some years, interrupted the peace of that quarter by predatory attacks upon our citizens, and upon the indigenous and emigrant Indians, whom we are under obligations to protect. Their war parties have annoyed our citizens in their intercourse with the Mexican States, and have rendered the communication difficult and hazardous. It became necessary to put a stop to this state of things, either by amicable representations or by force. Those remote tribes have little knowledge of the strength of the United States, or of their own relative weakness; and it was hoped that the display of a respectable military force, for the first time in their country, would satisfy them that further hostilities would lead to their destruction. The dragoons, being peculiarly adapted to this service, were ordered to penetrate into that region, and to endeavor by peaceable remonstrances to establish permanent tranquillity; and, if these should fail, to repel any hostile demonstrations which might be made. Fortunately the efforts to introduce amicable relations were successful, and the object of the expedition was obtained without a single act of hostility. Colonel Dodge, who led the expedition, and his whole command appear to have performed their duties in the most satisfactory manner, and they encountered with firmness the privations incident to the harassing service upon which they were ordered. It is to be regretted that the prevalence of sickness prevented the whole regiment from joining in this duty, as the same zeal for the public interest pervaded the whole. That sickness deprived the country of some valuable lives, and among others of Brigadier General Leavenworth. Impelled by his anxiety to forward the views of the government, he exposed himself, while yet weak, to the hardships of a border campaign, and sunk under the malady which these induced. His high personal character, his services during the late war, and his exemplary official conduct since, are too well known to you to require from me anything more than this brief allusion to his worth and fate.

Among the accompanying documents will be found a full statement of the proceedings of Colonel Dodge, and of the satisfactory result of his expedition.

The report of the chief engineer contains a summary of the various objects intrusted to his supervision, and of their progress and condition. It will be seen that the Cumberland road, east of Wheeling, will be soon completed in the manner required by an act of last session, and for the amount allowed by law. No further appropriations will be asked for. As much progress has been made in the other works as the advanced state of the season when the appropriations were made would permit.

I beg leave to ask your particular attention to that part of the report of the chief engineer which recommends an addition to the number of officers of his corps. I believe the public service requires this measure. New duties have recently been imposed upon the engineer corps by express acts of Congress, while in other cases it has been found necessary, by Executive regulation, to require from the officers services not originally contemplated in the organization of the department. The erection of

fortifications, the construction of roads, the establishment of fixed points by astronomical observations in boundary lines, and the improvement of harbors and rivers, are among the objects committed to the engineer officers. And I feel bound to report to you that, as far as my observation or information has extended, their duties have been performed in the most satisfactory and exemplary manner. In scientific acquirements and in their practical application these officers are deserving of high commendation, and it is very desirable that their numbers should be so far augmented as to insure their personal attention to all the objects within the control of the Engineer department. This cannot now be done, and the public service suffers in consequence of it.

Similar reasons call for a reorganization of the topographical corps, and the officer at the head of it has submitted a *projet* for this purpose, which, while it will render that corps more efficient, will not increase the public expense. I ask for it your favorable consideration. The duties connected with this branch of the service require peculiar attainments and great practical experience. They can best be performed by officers devoting their whole time and attention to the subject. A system of detail requiring periodical changes, however proper it may be with relation to a just routine of military duties, so long as temporary assistants are selected from, and continued in, the line of the army, it is still not calculated to insure the best execution of the functions appropriately belonging to the topographical engineers. The remedy would be to remodel the corps, and permanently to attach to it as many officers as may be necessary; and, by consolidating with it the civil engineers, the general operations would be simplified, and the duties of the corps might embrace all the objects connected with surveys for civil or military purposes. There is in this corps a fund of experience and information which cannot but be useful to the country.

It will be seen, by adverting to the report of the officer in charge of the Topographical bureau, that difficulties have occurred in the execution of the joint resolution of Congress, passed at the last session, and providing for the construction of a railroad through the public grounds at Harper's Ferry. Some modification will be necessary before the object of Congress and of the company can be attained, and this may probably be effected by requiring the latter to pay the value of any improvements injured by the road, or by giving authority to replace them in other positions, should they be deemed of sufficient importance to require being paid for or removed.

The present condition of the work at the Delaware breakwater is shown in the report of the quartermaster general, and in that of the commission lately instituted by your orders to examine it. It has been known for some time that gradual depositions were making in the vicinity of this work by which the depth of water was somewhat reduced; but until this season the process was so slow and uncertain that no anxiety was felt with respect to its final effect upon this great national improvement. Recently, however, the accumulation of sand in the artificial harbor has been much more rapid, and indicated the necessity of a thorough examination by scientific persons in order to ascertain, if possible, the causes of this occurrence and to check or obviate them. The views of the officers selected for this purpose will be found in their report, and, agreeably to your directions, they have been adopted by the department. An estimate for one hundred thousand dollars, to be applied to this work, is among the annual estimates of the department, and, if approved by Congress, that sum will be appropriated in the manner pointed out by the report, to the completion of that part of the work already begun, and yet unfinished. In the meantime, by a series of observations frequently and carefully taken, the probable operation of the tides and currents may be ascertained and the best remedy to counteract them pointed out.

The act of March 2, 1829, "to continue the present mode of supplying the army of the United States," expires by its own limitation on the 2d of March next. The Subsistence department, which was continued by this act, has been found highly useful to the army and beneficial to the public by the efficiency and economy of its administration. From my own knowledge of its officers and operations, as well as from what I have otherwise learned of these, I feel called upon to present this subject particularly to your attention, satisfied that the continuance of the department is demanded by the best interest of the service.

The reports of the major general and of the other heads of bureaus will communicate all the necessary information in relation to subjects respectively committed to them. I am not aware that there is any particular matter requiring your special attention. These reports are satisfactory in the views they exhibit of the course of administration, and of the reduced expenditures which are required for the service of the coming year.

At the last session of Congress so much of the laws as authorizes the conferring of brevets for ten years' service in one grade was repealed, and the nominations of all officers who had completed that term prior to the repeal was confirmed. This change seems to bear with some severity upon those who had served during the greater portion, but not the whole of such term. The existing laws and the practice under them held out to all officers as an inducement to good conduct the prospect of promotion after ten years' faithful services in one grade. In military life the hope of professional distinction is essential to a high and honorable discharge of the duties to which its members are devoted. If this is destroyed or neglected, little more than a mechanical execution of these duties can be expected. In our army this sentiment is as dear and as much cherished as in any other, and if not the cause, it is certainly the accompaniment of zealous devotion to the public interest. All the officers who, before the repeal of this law, had entered upon what may be termed their probation, expected, and had a right to expect, that if, at its termination, they should have complied with the condition by faithful service, the reward held out would be granted to them. I venture respectfully to suggest whether justice does not require such a modification of this law as to authorize the granting of brevets to every one whose term of ten years had commenced before its repeal at the end of such term, if the conditions of the law shall be fulfilled. This would insure the ultimate abolition of the practice which Congress had in view, while it would seem to be giving due weight to claims founded, if not in right, certainly in strong considerations connected with the services and situation of the officers. This valuable class of the community is exposed to every vicissitude incident to climate and situation, and the pecuniary consideration they receive is barely sufficient to enable them to meet the demands to which they are liable.

Disclosures have been made during the past season showing the necessity of a thorough investigation into the operation of the laws granting pensions and gratuities for military services. It is ascertained that many frauds have been committed—some in the application for pensions, and others in the continuance of these payments. As these disclosures have been the result of accident, it is impossible to judge to what extent frauds may have been committed; but enough has occurred to satisfy me that some new mode of proceeding is essentially necessary to detect and check these abuses.

In the administration of the laws on this subject, the parties are required to make certain declarations before the judicial tribunals, and the opinions of these tribunals are requested in order to determine the

validity of the application. In the administrative examination of the papers submitted in support of a claim, if the name of the applicant is found upon the recorded muster-rolls, and his identity is established by his own declaration and the proper certificates, the pension is granted as a matter of course. In far the greater number of cases, however, no muster-rolls of the corps exist, and frequently where they do exist they are defective, and a resort to other testimony in the examination of the claim becomes, therefore, necessary. Here a more detailed statement of services is required from the party, combining the various circumstances connected with such duty, best calculated to enable the proper examining officers to compare the statement with the records of the office, and with other facts known to them, and thus to assist in detecting frauds, if any exist. In addition to this, a certificate of two respectable persons, acquainted with the party, is made necessary, stating his age, and the opinion in the neighborhood where he resides that he is a soldier of the revolution, and their concurrence therein; and to this must be added the certificate and opinion of the proper court upon the whole matter.

Besides this course of proceeding, which is applicable more particularly to the militia claimants, very few muster-rolls of which remain, the testimony of two persons actually acquainted with the services of the applicant is necessary, wherever he served in the regular army, and his name is not to be found on a muster-roll, as, in that case, evidence is necessary to rebut the presumption against him.

This system was adopted upon great consideration, and it is difficult to see how the law can be administered if further requisites are demanded. But experience has shown that the prescribed certificates are sometimes granted without due caution, and that persons desirous of converting the provisions of the law to their own benefit have been enabled to procure official attestations, and even the seal of the court, under circumstances calculated to weaken, if not to destroy, the public confidence in these safeguards. Seals have likewise been taken from useless attestations and affixed to others, and direct forgeries have been committed in the preparation of the whole papers. And these proceedings have been resorted to not only to establish the original claim by placing the applicant upon the roll, but also to establish his right to each semi-annual payment by proving his identity. It is obvious that a system depending for its correctness upon the conduct of such a variety of persons and officers not responsible to the general government, and where, frequently, a natural sympathy for the claims for the time and war-worn veterans would lead to much practical relaxation, must be liable to abuse; although till very recently the extent to which such abuses may have gone was not suspected. Some plan is now necessary by which a re-examination may be made—a plan which, while it insures to the honest and gallant survivors of the revolution all that they expect, and all that the country has provided, shall at the same time lay open the frauds which have been committed, and prevent their occurrence hereafter.

In the report of the Commissioner of Pensions his views upon the subject are given, which appear to me practical and judicious, and, as such, I ask for them your favorable recommendation to Congress. An examination at the residence, or in the neighborhood of each person now drawing a pension, into the circumstances of his case, appears to me to present the only effectual means of accomplishing the desired object. Undertaken by proper persons and conducted with proper discretion, it could scarcely fail to confirm the grants made to honest applicants, and to detect those which have been fraudulently obtained by dishonest ones. It appears to me that the expense of such a measure ought not to delay its immediate adoption. It is impossible even to conjecture the amount of surreptitious claims; it may be far greater than the data now before the office enable us to estimate. And possibly conjecture and recent disclosures may have led to the suspicion that the ramifications of the system have been more extended and the abuses greater than a rigid inquiry may confirm. In the one case the beneficial result would be the relief of the treasury from fraudulent payments and the punishment of those concerned in them; and, in the other, it would be satisfactory to know that, while the bounty of the government has been justly appropriated, it has not been improperly applied.

The provision of law for the establishment of a pension office as a branch of this department expires by its own limitation at the end of the present session of Congress. It is essential to a due execution of the duties connected with the system of pensions and gratuities for military services that this arrangement should be renewed and continued. The applicants and grantees are so numerous, the aggregate amount disbursed so great, equalling at least three million two hundred thousand dollars annually, and the doubtful questions, both of fact and principle, so frequent and complicated, that unless a branch of administration, carefully superintended, is devoted exclusively to this service, the public interest must materially suffer.

The Commissioner of Indian Affairs has exhibited, in detail, the transactions in the important branch of the public service confided to his superintendance. It is only necessary that I should advert to the more prominent subjects which have received, or which require the action of the government.

The commission for the adjustment of unsettled relations with the Indians west of the Mississippi terminated, by the provisions of the act instituting it, in July last. Important benefits have resulted from the labors of the commissioners in the adjustment of difficult questions connected with the Indians of that region, and in the treaty arrangements which have been entered into by them. The country assigned for the permanent residence of the eastern Indians has been so apportioned among them that little difficulty is anticipated from conflicting claims or from doubtful boundaries, and both in quality and extent there can be no doubt but that the region allotted to them will be amply sufficient for their comfortable subsistence during an indefinite period of time.

An important council has been held at Fort Gibson by Colonel Dodge and by Major Armstrong, the superintendent of Indian affairs, with the chiefs of several of the tribes of that quarter, including some of the wandering bands, whose predatory operations have heretofore kept the frontier in alarm. At this council the situation of the Indians was fully discussed and amicable relations established. It is to be hoped that the feelings with which they separated will be permanent, and their intercourse hereafter uninterrupted.

The united tribe of Pottawatomies, Ottawas, and Chippewas, possessing the country in the vicinity of Chicago, have conditionally acceded to the alteration proposed in the boundaries of the tract assigned for them west of the Mississippi, by the treaty concluded in 1833. Should their proposition be accepted, an extensive and valuable region will be opened for settlement, and they will be removed to a district whose climate is suitable to their habits, and whose other advantages cannot fail to offer them strong inducements for moral and physical improvements.

An arrangement has been made with the Miamies for the cession of a part of their reservation in the State of Indiana. The tracts held by them are far more extensive than they require; and as they appear to be not yet prepared for removal, this relinquishment, without injuring them, will relieve the State, in

some measure, from the embarrassment caused by such large reservations as they possess, embracing a most valuable part of the country, and interrupting the settlements and communication.

Instructions were given, immediately after the last session of Congress, for purchasing from the Wyandots in Ohio, if they were disposed to sell, the reservation secured to them in that State, and for their removal to the west. The commissioner, Governor Lucas, conducted the negotiation with great fairness and propriety, fully explaining to the Indians their own position, the wishes of the government, and the course of circumstances urging their removal. The matter is not yet terminated, the Indians having requested time for further consideration.

The necessary appropriations will be asked for the removal of the Seminoles, agreeably to the treaty formed with them; and arrangements have been made for the emigration of the Creeks as fast as they are prepared for a change of residence. There has not yet been sufficient time to ascertain the result of these measures.

I am not able to submit to you any more favorable views of the condition of the Cherokees than were embraced in my last annual report. While every dictate of prudence, and, in fact, of self-preservation, urges their removal, unhappy councils and internal divisions prevent the adoption of that course. Where they are, they are declining, and must decline, while that portion of the tribe which is established in the west is realizing the benefits which were expected to result from a change of position. The system of removal, however, by enrolment, is going on, and during this season about one thousand persons have passed to the west.

The treaty concluded the 24th of May last with the Chickasaws has altered the relations in which they were placed with the United States. The proceeds derivable from a portion of their present possessions have been assigned to them, and reservations have also been provided for such as choose to become citizens of the United States. Their future condition now depends upon their own views and experience, as they have a right to remain or remove, in conformity with their own judgment. The means placed at their disposal are fully adequate to their permanent comfortable establishment, and it is to be sincerely hoped that they will apply them wisely.

The acts of the last session of Congress on the subject of Indian affairs have introduced important changes into those relations. Many of the provisions of former laws had become inappropriate or inadequate, and not suited to the changes which time and circumstances had made. In the act regulating the intercourse with the various tribes, the principles of intercommunication with them are laid down, and the necessary details provided. In that for the reorganization of the department, the number of officers employed has been much reduced, and the current expenses diminished.

Any changes which experience may show to be necessary in these acts can from time to time be provided, until they shall become fully adapted to the situation and condition of the Indians, and to the intercourse, both commercial and political, which ought to exist between them and our government and citizens. The system of removal has changed essentially the prospects of the emigrants, and has imposed new obligations upon the United States. A vast tract of country, containing much more than one hundred millions of acres, has been set apart for the permanent residence of these Indians, and already about thirty thousand have been removed to it. The government is under treaty stipulations to remove nearly fifty thousand others to the same region, including the Illinois and Lake Michigan Indians, with whom a conditional arrangement has been made. This extensive district, embracing a great variety of soil and climate, has been divided among the several tribes, and definite boundaries assigned to each. They will there be brought into juxtaposition with one another, and also into contact, and possibly into collision, with the native tribes of that country; and it seems highly desirable that some plan should be adopted for the regulation of the intercourse among these divided communities, and for the exercise of a general power of supervision over them, so far as these objects can be effected consistently with the power of Congress, and with the various treaty stipulations existing with them. It is difficult, indeed, to conceive how peace can be preserved, and the guarantee of protection held out to the eastern Indians fulfilled without some legislative provision upon this subject.

It will be seen, by adverting to the estimates, that the ordinary expenditures of the Indian department have been reduced to the sum of fifty-nine thousand eight hundred dollars, a material diminution, which the provisions of the law of the last session, organizing that department, has rendered practicable, and which brings down its expenditures to a sum less by one-half than the average annual amount for some years past. The appropriations for annuities, being fixed and depending upon treaty stipulations, cannot be reduced by administration.

The resolution of the Senate of December 23, 1833, requiring the correspondence of the Indian department, together with a detailed statement of expenditures for some years past, has been complied with. These documents will enable Congress to judge of the operations of this branch of the public service, both in its administrative and fiscal concerns.

I have the honor to be, with great respect, your obedient servant,

LEWIS CASS.

The PRESIDENT of the United States.

No. 1.—REPORT OF THE MAJOR GENERAL OF THE ARMY.

HEADQUARTERS OF THE ARMY, *Washington, November 28, 1834.*

SIR: In compliance with the instructions contained in your letter of the 15th August, I have the honor to submit herewith the under-mentioned statements and returns:

1. A statement showing the organization of the army, marked A.
2. A return of the actual state of the army, marked B.
3. A return exhibiting the strength of the eastern department, designating the posts and garrisons, marked C.
4. A return exhibiting the strength of the western department, designating the posts and garrisons, marked D.
5. A statement showing the number of recruits enlisted in the army from the 1st of January to the 30th of September, 1834, marked E.
6. An estimate of the funds required for the recruiting service for the year 1835, marked F.
7. An estimate of the contingent expenses of the headquarters of the army, including those of the office of the Adjutant General, for the year 1835, marked G.

By these returns it will be perceived that the several corps of the army are kept to their establishment, as nearly as practicable, without exceeding the numerical force authorized by law.

Since my last annual report the five companies of the regiment of dragoons which remained to be raised, have been recruited; and, after having been organized at Jefferson Barracks, they took up their march to Fort Gibson, where the headquarters of the regiment were established, preparatory to entering the Indian country, in conformity to your instructions.

In consequence of the lateness of the arrival of these companies at Fort Gibson, and a variety of unforeseen difficulties in obtaining the proper arms and equipments for the regiment, the movement to the west was delayed until the 15th of June.

In the meantime, General Leavenworth, who had been appointed to the command of the troops on the western frontier, south of the northern boundary of the State of Missouri, detached one company of that regiment as an escort to the caravan of traders to Santa Fé, in Mexico. He also employed detachments of the 3d and 7th regiments of infantry in opening roads between the posts on the Arkansas and Red rivers, and in establishing new posts beyond the settlements of the emigrated Indians, for the purpose of facilitating the movements of the expedition, and covering the country occupied by those Indians, in the event of a failure to secure a friendly intercourse with the wild tribes inhabiting the country beyond them.

These arrangements having been made, the expedition, consisting of nine companies, under Colonel Dodge, was put in motion, accompanied by a deputation from the several tribes of friendly Indians to act as guides and interpreters, and to aid in bringing about a general good understanding between the several nations; and in order that the friendly intercourse might be further promoted, two Indian girls, the one a Pawnee and the other a Kiowa, who had been captured by the Osages, also accompanied the expedition for the purpose of being delivered to their friends.

Owing to the sickness which prevailed among the troops the command, on reaching the river Washita, about one hundred and eighty miles west of Fort Gibson, was so much reduced as to render a reorganization of the companies necessary. Colonel Dodge, accordingly, out of the effective force formed six companies, each forty-two strong, and, under instructions from General Leavenworth, continued his march to the Pawnee village, situated on a branch of the Red river. Here Colonel Dodge held a council with the Comanches, the Pawnees (or Toyaslas,) the Kiowas, and the deputation of Indians which accompanied him, amounting in all to about two thousand persons. He explained the object of the expedition and was instrumental in bringing about a friendly intercourse between several hostile tribes. He also obtained the surrender of the son of a Mr. Martin, an American citizen, who had been murdered by the Indians, and of a black boy captured by them. A more particular account of the interview between Colonel Dodge and the assembled tribes will be found in the journal of the expedition annexed to this report.

After delivering the two Indian girls to their parents, Colonel Dodge, accompanied by several of the chiefs of the Comanches, Pawnees, and Kiowas, returned with his command to Fort Gibson, whence the regiment proceeded to take up the positions previously fixed on. Four companies under Colonel Dodge marched to Fort Leavenworth, on the Missouri; three companies, under Lieutenant Colonel Kearney, to the Des Moines; and three, under Major Mason, to a point on the Arkansas about eighty miles above Fort Gibson. These companies have arrived at their destinations and are engaged in preparing their winter quarters.

The reports of the inspectors general as to the condition of the army are highly favorable. The dispersed state of the troops prevents any great improvement in extended evolutions; but the police and administration are, in every respect, creditable to the officers in command. The character of the soldiery is evidently improving. The law for bettering the condition of the rank and file seems to have already produced the most beneficial results. The vice of drunkenness has diminished, and with it desertion and other crimes; while at the same time better men enlist.

The services performed by the officers of the line are diversified and extensive. Besides the duties in camp and quarters, they furnish assistance to the various branches of the staff and the Military Academy, in all of which the number of officers authorized by law is insufficient for the performance of the multiplied duties imposed on them beyond their ordinary service. The number of officers detached from regimental duty amounts to one hundred and twenty-two. The corps of engineers, and the topographical engineers, as well as the Ordnance department, are insufficient, according to their present strength, to accomplish all that is required of them. The duties of these officers are daily becoming more extensive, and to enable them to execute these duties, details, to a great extent, are constantly made from the line. The effect of diverting so many officers from their appropriate functions is to derange the regular routine of duty, to disorganize the service in the line, and frequently to leave companies with only one officer. In addition to which, the officers who are thus employed are too apt to lose their *esprit du corps*, and to return to their duties in the line with a distaste for them.

I would, therefore, respectfully suggest that great economy and much good would result to the service, if the requisite number of officers for the engineers, topographical engineers, ordnance department, and the Military Academy, were permanently detached from the line and made members of those several branches. These branches might be so organized by law as to give from the line of the army to the engineers six 1st and six 2d lieutenants, and to the topographical engineers, the ordnance, and the Military Academy, each, ten 1st and ten 2d lieutenants, making in all seventy-two officers; these officers to be taken from the line of the army, so as to leave one 1st and one 2d lieutenant with each company.

Respectfully submitted

ALEX. MACOMB, *Major General, Commanding the Army.*

Hon. the SECRETARY OF WAR.

Detachment at West Point			16
Band at West Point			15
Detachment of orderlies at Washington			3
For the hospital department			7
At ordnance depots			68

Total number enlisted from the 1st of January to the 30th of September, 1834 2, 111

Amount of recruiting funds advanced to officers from the 1st of January to the 30th of September, 1834	\$16, 412 71
Amount of those funds accounted for within the same period	15, 173 58

Balance in the hands of recruiting officers on the 30th of September, 1834 1, 239 13

Amount of recruiting funds advanced for raising the regiment of dragoons from the 1st of January to the 30th of September, 1833	1, 585 87
Amount of those funds accounted for up to the same period	791 25

Balance in the hands of dragoon officers on the 30th of September, 1833 794 62

Respectfully submitted.

R. JONES, Adjutant General.

Major General ALEX. MACOMB, Commander-in-chief United States Army.

F.

ADJUTANT GENERAL'S OFFICE, Washington, October 20, 1834.

SIR: Pursuant to your instructions, I submit the following estimate for the expenses of the recruiting service of the army for the year 1835:

1st. "Two months' extra pay," allowed by the act of March 2, 1833, to each musician and private who may re-enlist into his company or regiment, to wit:

For 335 re-enlisted musicians and privates, at \$12 for each man	\$4, 020 00
From the above sum of \$4,020, deduct the balance of the appropriation for "extra pay," on account of re-enlistments for the current year, which, it is calculated, will remain in the treasury on the 31st of December, 1834	3, 966 66

Total amount required to be appropriated for "two months' extra pay" allowed to re-enlisted musicians and privates, for the year 1835.....	\$53 34
--	---------

2.—CONTINGENT EXPENSES,

Including quarters, fuel, bunks, straw, compensation to citizen surgeons for examination and medical attendance, magistrates' fees for administering the oath of allegiance to recruits, and all other expenses on their account, until put in march to join their regiments, at \$8 per man for 2,441 recruits, exclusive of the number (335) of soldiers that will, it is calculated, re-enlist.....	19, 528 00
From the above sum of \$19,528 deduct the balance of the appropriation for "expenses of recruiting" for the current year which it is calculated will remain in the treasury on the 31st of December, 1834.....	1, 868 47
Total amount required to be appropriated for "expenses of recruiting" for the year 1835.....	17, 659 53

RECAPITULATION.

Amount required for two months' "extra pay" allowed to each musician and private who may re-enlist in 1835.....	53 34
Amount required for "expenses of recruiting" in 1835.....	17, 659 53
Aggregate sum required to be appropriated for the recruiting service for the year 1835....	17, 712 87

It is, perhaps, here proper to state, that of the appropriation for the year 1833, under the specific head of "bounties and premiums," there remains in the treasury, unexpended, the sum of \$38,379 52; which sum, since the change made in the mode of enlisting, by the act of March 2, 1833, is not properly available for these objects; but should this balance of the unexpended appropriation for 1833, for "bounties and premiums," be deemed to be applicable to the general expenses of the recruiting service, then the sum of \$17,712 87, as above required to be appropriated for the year 1835, may be deducted therefrom, and so applied, and the balance, amounting to \$20,666 65, remain in the treasury, subject to appropriation for any other purpose.

REMARKS AND EXPLANATIONS.

The number of recruits, as above estimated for, to fill up the rank and file of the army for 1835 is calculated as follows, to wit:

The recruits required for the several regiments of the army on the 30th of September, 1834, as exhibited by the latest monthly returns received, were.....	813
To which add the number of discharges that will take place by the expiration of enlistments, from the 1st of October to the 31st of December, 1834.....	164
Add also the estimated number of casualties by deaths, desertions, and discharges for disability, &c., for the same period.....	388
	1, 365
From the above deduct the number of recruits in depot, not assigned to regiments.....	308
Deduct also the estimated number that may be enlisted between the 1st of October and the 31st of December, 1834.....	550
	858
Number of recruits required to fill the rank and file of the army on the 31st of December, 1834, To the above number of vacancies (507) add the number of discharges that will take place by the expiration of service, from the 1st of January, 1835, to the 31st of December, 1835....	695
Add also the estimated number of vacancies occasioned by deaths, desertions, and discharges for disability, &c., for the same period.....	1, 574
Total number of recruits (inclusive of re-enlistments) required for the military establishment, exclusive of the enlisted men for the Ordnance department, for the year 1835.....	2, 776

Respectfully submitted.

R. JONES, Adjutant General.

Major General ALEX. MACOMB, *Commander-in-chief United States Army.*

G.

ADJUTANT GENERAL'S OFFICE, Washington, October 20, 1834.

SIR: The following estimate, to meet the expenses incident to the Adjutant General's office during the year 1835, is respectfully submitted:

For compensation of one clerk.....	\$1, 150
For compensation of one clerk, per act of April 20, 1818.....	1, 000
For compensation of one clerk, per act of March 2, 1827.....	800
	2, 950

For printing the Army Register, printing "Orders" announcing promotions and appointments in the army, regulations, sentences of courts-martial, &c.; stationery, binding official records and congressional documents, &c.	\$1,000
For congressional documents, professional books and maps, and other contingent expenses for the general-in-chief's office.	200
	1,200

I am, sir, very respectfully, your obedient servant,

Major General MACOMB, *Commanding the Army.*

R. JONES, *Adjutant General.*

Journal of Colonel Dodge's expedition from Fort Gibson to the Pawnee Picot village.

FORT GIBSON, August 26, 1834.

COLONEL: In obedience to your instructions I have made, and have the honor herewith to present to you, a journal of the campaign of the regiment of dragoons for the summer of 1834.

With great respect, your obedient servant,

T. B. WHEELOCK, *First Lieutenant Dragoons*

Colonel HENRY DODGE, *United States Dragoons.*

In consequence of the late arrivals of the companies from Jefferson barracks, the regiment did not move as early as could have been wished.

The nine companies destined for the campaign (Captain Wharton's company, "A," marched in May to escort a body of traders to Santa Fé) began their movement from Camp Jackson on the 15th of June, and under the direction of the field and company officers encamped on the west bank of the Arkansas, three miles from Fort Gibson; thence moved eighteen miles westwardly to Camp Rendezvous. Strength of the regiment about five hundred.

Arrangement of officers for the campaign.

Colonel—Henry Dodge.

Lieutenant Colonel—S. W. Kearney.

Major—R. B. Mason.

Staff—Adjutant—First Lieutenant J. W. Hamilton.

Ordnance officer, &c.—First Lieutenant T. B. Wheelock.

Acting assistant quartermaster—First Lieutenant Thomas Swords.

Acting assistant commissary of subsistence—Second Lieutenant John S. Van Deveer.

Company officers.—Company "B"—Captain Sumner, Second Lieutenant Burgwin, Brevet Second Lieutenant McClure.

Company "C"—Captain Duncan, Brevet Second Lieutenant Bowman.

Company "D"—Captain Hunter, First Lieutenant Moore, Second Lieutenant Steen.

Company "E"—Captain Perkins, Brevet Second Lieutenant Kingsbury.

Company "F"—First Lieutenant Davis, Brevet Second Lieutenant Eastman, 2d infantry.

Company "G"—First Lieutenant Cooke, Second Lieutenant Territt.

Company "H"—Captain Boone, Brevet Second Lieutenant Terry.

Company "I"—Captain Brown, Brevet Second Lieutenant Edwards.

Company "K"—First Lieutenant IZARD, Second Lieutenant Shaumburgh.

Eight companies (company "K" was left at Camp Jackson to complete preparations for the march) were assembled at Camp Rendezvous on the evening of the 20th June.

June 21.—Twenty-three men, pronounced by the surgeon unfit for the campaign, sent back to Fort Gibson. The regiment took up the line of march for the Washita upon the new road made by General Leavenworth, at eight o'clock in the morning; moved twenty miles southwest; crossed the north fork of the Canadian; encamped one mile thence; difficulty with wagons ascending the bank of this stream; assistance of thirty or forty men required to each. Good water at our camp—great want of it on the road. Sounds of the rapids of the north fork cheering to men and horses. With the command seventy beaves. Face of the country to-day, in general, open, rolling prairie, soil light; a few miles from our halt much timber and stony land.

Agreeably to previous arrangements, four bands of Indians joined us to-day, viz: eleven Osages, eight Cherokees, six Delawares, and seven Senecas. These men are to serve as guides, hunters, and interpreters, also as representatives of their several nations, should we, as we hope to do, meet with the Pawnees; and thus open the way to a friendly understanding between these nations. Among these Indians are some of the *élite* of the nations to which they belong.

Dutch, chief of the Cherokee party, remarkable for personal beauty, daring character, and successful enterprises against the Osages.

George Bullett, or Pon-da-gne-se, is the principal man of the Delaware party.

Beatie, a Frenchman, who has lived nearly all his life among the Osages, has charge of this band, and is celebrated for his skill as a hunter.

De-nath-de-ago is the leader of the seven Senecas.

We take with us, under conduct of the Osages, two Indian girls. One a Kiowa, about fifteen years of age, captured by the Osages a year or two since; the other a Pawnee prisoner, about eighteen years of age, taken by the Osages five or six years ago.

The restoration of these captive girls to their respective nations will, it is expected, facilitate the intercourse aimed for, conciliate the Indians, and pave the way to desirable treaties.

CAMP CASS, June 22.—The command marched at nine o'clock, westwardly, fifteen miles. Captain Brown's company ("I") left in rear on account of breaking down of company wagon—*wagons great drawbacks to military expeditions*. Route to-day chiefly through timber, here and there small prairies; water scarce; beds of creeks dry. Encamped at the foot of a prairie mound, four hundred feet in height, from the summit of which is seen a magnificent valley, stretching in every direction some twenty-five or thirty miles. We found here good water and grazing.

June 23.—Marched from Camp Cass at nine o'clock, west by south, seventeen miles; alternate prairie and timber; water less scarce than before, but warm, of a milky color, and in pools.

June 24.—The advance was sounded at nine o'clock; marched twenty-one miles west by south, halted at four o'clock p. m. and encamped near good water and grazing; excellent spring, impregnated with sulphur and iron. Captain Brown's company joined us this morning; road to-day chiefly through timber; met two infantry soldiers going from the post at the mouth of Little river to Fort Gibson.

June 25.—Colonel Dodge and staff reached Camp Canadian, on the west bank of the Canadian, thirteen miles from last camp, at twelve o'clock; reported to General Leavenworth, whom we found in camp; command came up at two o'clock. Road to-day through open, level prairie, well watered; crossed the Canadian half a mile below the mouth of Little river; Canadian two hundred yards wide, bed nearly dry, low banks; Indian name signifies "river without banks." Near the east side passed Lieutenant Holmes, 7th infantry, with a company of the 7th regiment of infantry. Lieutenant Holmes just commenced building a fort and quarters for two companies. At Camp Canadian another sulphur spring, and good grazing and water.

June 26.—At half-past eight o'clock Colonel Dodge and part of his staff and a detachment of about twenty dragoons, and our bands of Indians, preceded the command, and found General Leavenworth at Camp Osage, five miles south of Cave creek; halted at half-past five o'clock p. m., thirty-two miles from Camp Canadian. Streams to-day frequent, and abundantly supplied. The regiment, under command of Lieutenant Colonel Kearney, left camp at half-past eight o'clock; left twenty-seven sick men at Camp Canadian, with Assistant Surgeon Hailes and Lieutenant Edwards in charge. Lieutenant Cooke was left here sick. Ten miles from Camp Canadian passed a band of Osages, between 500 and 600 in number, employed in curing buffalo meat, second chief of the nation, "Black Dog," in command—famous as a warrior; two Osages joined us as volunteers.

June 27.—Left Camp Osage (General Leavenworth in company) at half-past six o'clock; marched twenty three miles westwardly, and encamped on a creek at the end of a thirteen mile prairie; limestone, excellent streams of water, and frequent; soil in general, since leaving Fort Gibson, light and sandy, but often rich, and well adapted to grain. Crossed Blue river ten miles from Camp Osage; saw in the vicinity much rich iron ore scattered over the surface of the earth. Met with and killed the first buffalo seen since the commencement of the march. Mineralogy of the country, thus far, of secondary formation; sandstone, limestone, freestone, and slate.

June 28.—Set out at seven o'clock; marched westwardly twenty-five miles, encamped on Bois d'Arc creek; passed a herd of buffalo this morning, some thirty or forty in number; Indians with us killed six of them. Road to-day chiefly over brushy prairie and through timber, some open prairie; water plentiful and good; character of timber, in general, small—post oak and black jack, and some trees of Bois d'Arc, a wood valuable to Indians for bows—a yellow, elastic wood of great tenacity. Entered the Washita bottom eight miles on the day's route; elm trees, sycamores, and ash. Health of the party good.

CAMP WASHITA, Sunday, June 29.—Marched fifteen miles west by south; reached Captain Dean's camp (two companies of 3d infantry) a mile or two from the Washita, at half-past 12 o'clock; encamped near him. Road to-day through timber and brushy prairie; limestone gave place to-day to red sandstone; saw more iron ore. Delightful spring near Captain Dean's camp. Captain Dean informs us that Pawnees have been seen in the neighborhood within a few days.

June 30.—General Leavenworth declares his intention of commanding in person the expedition to the Pawnee country. Learned that some companies of infantry were to accompany us. Lieutenants Northrop and Steen, with twenty dragoons, joined us from west side of Washita; report Pawnees seen in that direction. (Remained in camp.)

July 1.—The regiment under Colonel Kearney arrived at 10 o'clock a. m. and encamped near the Washita. Our detachment joined main Camp Washita. Forty-five men and three officers sick—Lieutenants McClure, Eastman, and Ury. The surgeon attributes the sickness to exposure in the heat of the day. Seventy-five horses and mules disabled; rapid marching in the heat of the day and poor grazing at night are supposed to have been the causes. (Remained in camp.)

The "note of preparation" is now heard over the camp; all are engaged in making ready for a Pawnee chase.

July 2.—Remained in camp.

July 3.—Preparations for crossing the Washita; a platform upon two canoes fixed for that purpose. Whole day occupied with passage of the left wing; horse and mule lost in crossing. Captain Trenor joined. Osborn, a deserter from company "F," brought in by a party sent in pursuit of him; sutler's wagon arrived; Lieutenants Swords and Van Deever arrived. Great disappointment in not receiving by Lieutenant Swords horse-shoe nails; sent blacksmiths to Fort Towson to make nails. Lieutenant Edwards arrived with twenty-three men, who were left sick at the Canadian on the 26th ultimo; men chiefly recovered. Lieutenant Cooke had gone back to Fort Gibson on surgeon's certificate of ill health. (Remained in camp.)

July 4.—The right wing of the regiment crossed the Washita. Command encamped about four miles west from Camp Washita. Four horses drowned; last wagon passed over after dark in the evening. The Washita is a narrow stream, about forty-five yards in width; water of a dark red color; banks bold; shores miry; inconvenient landing for horses. Monsieur Beyrick, botanist, &c., joined us to-day, with the view of accompanying the regiment to the prairie. Mr. Catlin, portrait painter, is also with us.

General Leavenworth declares his intention of sending Colonel Dodge with two hundred and fifty men to the Pawnee villages. He changes his determination to command in person. Left sick at Dean's camp, near the Washita, Lieutenants Swords, McClure, and Eastman. Left here — men for duty, and — sick.

July 5.—Change of camp promises to improve the health of the command; fine range for our horses, who have suffered of late for want of good grazing. Our horses in general, though thin, are apparently

well able, if treated with care, to perform the campaign before us; spirits of the officers and men good; sanguine expectations of a successful march upon the Pawnees. (Remained in camp.)

July 6.—Moved westwardly eight miles, to Camp Leavenworth.

July 7.—Marched at 4 o'clock p. m. westwardly five miles. Major Mason and a party of officers killed several buffalo. General Leavenworth joined us a short time previous to setting out from Camp Leavenworth. Left him there. By his order the regiment was reorganized. Number of companies six, each consisting of forty-two rank and file. Left one hundred and nine men for duty, and eighty-six sick. Left the following named officers: Captain Trenor in command, Lieutenants Shaumburg, (sick,) Ury, (sick,) Bowman, Kingsbury, and Van Deveer.

New arrangement of officers.

Field and staff—Colonel Dodge, Lieutenant Colonel Kearney, Major Mason, Lieutenant and Adjutant Hamilton, and Lieutenant Wheelock, temporarily attached.

Company "B"—Captain Sumner, Lieutenant Burgwin.

Company "C"—Captain Duncan, Lieutenant Territt.

Company "D"—Captain Hunter, Lieutenants Moore and Steen.

Company "E"—Captain Perkins, Lieutenant Davis.

Company "H"—Captain Boon, Lieutenants Izard and Northrop.

Company "I"—Captain Browne, Lieutenant Edwards.

Companies "G" and "K" were temporarily broken up and divided amongst the six companies.

The command furnished with ten days' provisions and eighty rounds of cartridges per man; baggage reduced to lowest possible quantity; marched in two columns.

July 8.—Waiting for lost horses. A stupid sentinel last night mistook a horse for a hostile Indian, fired at and killed him; alarmed the camp, and sent off in a *stampede* the rest of the horses; recovered all save ten. The men of the regiment are excellent material, but unused to the woods. They often discover deficiencies in this kind of service. Among the officers are several excellent woodsmen; talent of this kind is exceedingly valuable to the regiment. We found here chalk. (Remained in camp.)

July 9.—The command marched at half-past 8 o'clock, northwest course, fourteen miles. Colonel Dodge this morning received instructions from General Leavenworth to send back a field officer to command at Camp Leavenworth. Lieutenant Colonel Kearney was ordered to report to General Leavenworth for that duty. Ten men whose horses were lost on the night of the 7th instant were sent back to Camp Leavenworth.

Soon after starting this morning several persons on horseback were discovered, supposed to be Pawnees. Face of country to-day high and rolling prairie. Encamped in a small prairie, in sight of a large mound, some three or four miles distant, bearing south 40° west.

July 10.—Cross Timbers; course to-day west 16 miles; country rough and broken, with but little water; little rain last night and this morning; cloudy weather during the day; some buffalo killed during the day; not much water at camp.

July 11.—Command divided into three columns; the right column under command of Major Mason, the centre column under Captain Hunter, the left column under command of Captain Sumner. Country to-day small prairies, bushy ravines, scrubby oak ridges; want of good water on the road; bad water at camp to-night; several buffalo killed to-day; course to-day west, distance twenty miles.

July 12.—Encamped in a grove of small open timber, near a fine grove; marched at 8 o'clock; course west, distance twelve miles; slips of prairie, timber, and bushy thickets.

CAMP CHOCTAW, July 13.—Passed through the last of the Cross Timbers, and entered upon the Grand prairie; marched at half past 8 o'clock from Camp Choctaw west by north twenty-three miles, and encamped on a creek; highly beautiful country, tolerably well watered; command impeded to-day by sick men in litters; Indians, supposed to be Pawnees, were seen to-day; wild horses in large herds; one of the Indian guides caught one of them; immense herds of buffalo; passed several springs of rock oil, (*petroleum*.) Command halted at 6 o'clock p. m.; rear guard did not come up until 10—kept back by the sick falling in the rear.

July 14.—Marched at half past 8 o'clock seventeen miles west; number of sick decreased. The command had advanced about half a mile, when on a hill to our right we discovered a party of horsemen; our spy-glasses soon determined them to be Indians. Colonel Dodge halted the columns, ordered a white flag, and with it and his staff moved in the direction of the Indians. After some delay, one of the party advanced upon full gallop, bearing a white flag upon his lance; he proved to be a Spaniard, who early in life had been taken by the Camanches. Colonel Dodge received him kindly, and through our interpreter, who spoke a little Spanish, made known to him our pacific disposition. Gradually the whole band, about thirty Indians, came to us and shook hands; they proved to be Camanches; discovered a good deal of alarm and eagerness to convince us of their disposition to be friendly; they rode good horses; they were all armed with bows and arrows and lances, and carried shields of buffalo hide. We inquired where their village was; they answered, "two days' journey," and seemed anxious to conduct us thither. In reply to our inquiries concerning the Pawnees, they seemed not to understand the term; told us the Toyash village was one day's journey from their camp; that they would send for the Toyash chiefs, if we would accompany them to the camp. They signified, however, their desire to have Colonel Dodge wait with his command in their camp, and go on the next day. Colonel Dodge paid no regard to their requests, but showed an indifference to their movements and an independence of them, which had the effect to make them follow us; they accompanied us. Found another band, making in all some forty or fifty; they told us that they were a very numerous people. Colonel Dodge told them that we were a very numerous people; that more troops were coming behind, with large guns. After we halted to encamp for the night, they came to beg tobacco, and to talk with Colonel Dodge, who informed them "that the President, the great American captain, had sent him to shake hands with them; that he wished to establish peace between them and their red brethren around them, to send traders among them, and to be forever friends." They shook hands with the Osages, Cherokees, Delawares, &c., who were with us, and seemed highly satisfied with their interview with us, and offered to accompany us to the Toyash village. Country to-day beautiful, open prairie; game scarce—two or three deer were killed, no buffalo seen; a herd of wild horses passed near us; provision threatens to be scarce; Colonel Dodge anxious to expedite business, lest his men may suffer on this account; one or two horses broke down to-day.

The Camanche is a fine looking Indian, in general naked; some of them wore blankets. The squaws are dressed in deer skins, and are good looking women; among them were several Spanish women,

evidently long used to Comanche habits; appearance of a Comanche fully equipped on horseback, with his lance and quiver and shield by his side, is beautifully classic. This has been an interesting day to us; our goal seems in sight; uncertainty of reaching the Pawnees much lessened.

July 15.—Marched at half past 7 o'clock twenty-four miles northwest; severe rain last night; Camanches left us this morning, with the exception of one, who remained as guide; he assures us that we shall reach the Comanche camp to-morrow. Colonel Dodge learns that the Camanches, Kiowas, and the band called by us the Pawnee Picts, but correctly termed the *Toyash*, are friends, and to a certain degree allies, and mingle so as to be, except in language, much the same people. The Camanches are, we learn, the largest band, the proudest and boldest; therefore the colonel has resolved to visit them first; thence to the Toyash village, establish friendly understandings with one or both, or war with one or both, as may be; officers and men on the alert, as if in the atmosphere of war.

July 16.—Marched at 9 o'clock, halted at half past 2 o'clock; course north by west, distance twelve miles; an accident occurred in camp last night—Sergeant Cross was shot by a dragoon in the hip. We had marched three or four miles, when we discovered a party of Comanches on our left. Colonel Dodge sent two officers to meet them and shake hands with them. They were a hunting party, some ten or twelve in number; they were brought to Colonel Dodge; the columns were halted; they shook hands with the colonel and his officers and the Indians; we then moved on together for the Comanche camp; the Pawnee girl recognized an old acquaintance in the captain of this party, and rendered service by interpreting what he said, through the Osages. The Comanche captain informs us that it is but a short distance to their camp; his people wish to be our friends, &c. Two or three miles with our new friends brought us in sight of their camp, situated in a valley. Here we met about a hundred mounted Comanches, who had come out to welcome us, and evidently not a little alarmed. We shook hands with them; the Cherokees, Osages, &c., advanced and performed the same ceremony, when we all moved together for their camp. On arriving at it, they invited us to cross the creek and encamp with them; Colonel Dodge, however, preferred leaving the creek between us and our red friends. This day has been a very interesting one—absolutely so and peculiarly so, as we were anxious, impatient, and uncertain as to the movements of these Indians. Six nations, some of whom had but recently been at war with each other, shake hands together—a form, it is true, but a type, we believe, of a permanent peace that must promote the interest of all. Our camp, "Comanche," an admirable position—the steep bank of a creek in front, and a ravine bounding the other three sides; habitual form of our camp a rectangle; horses picketed within it at night, and surrounded by a chain of sentinels; orders issued that no man should visit the Comanche camp, nor officer, without special permission. The Comanches have hoisted an American flag over their camp, which contains more than two hundred skin lodges; herds of horses, in all not less than three thousand, are grazing around them; they have been here evidently but a day or two; their chief is absent with a hunting party. We are now in sight of a chain of *peaks*, so called—mountains, bearing south and west; behind these are the Toyash villages. Some of these hills cannot be less than two thousand feet above the prairie at their base. Number of sick, twenty-nine; in litters, four. Our guide, yesterday, was not a little wavering in his disposition to serve us. Colonel Dodge presented him with a gun, which produced a fine effect upon his spirits. He could not *hear* the Pawnee girl; but no sooner was he in actual possession of the yanger, and felt the well-filled cartridge box buckled around his body, than his grave face became wreathed with smiles, his sense of hearing was suddenly restored, his arms sawed the air with signs, and, through the magical influence of the gun, we gained several fragments of useful information. We are exceeding unfortunate in not having an interpreter; our Spanish interpreter, a Cherokee, is very imperfect.

July 17.—Comanche chief still absent. Some of our officers purchased wild horses to-day. A blanket or butcher knife is equivalent to a horse. Waiting to-day for the Comanche chief to return to his camp. Colonel Dodge hopes to be able to induce him to accompany us to the Toyash villages. The Kiowa girl is quite sick to-day. One of the Comanches informs us that their great chief will be here to-morrow when the sun is high, and that he can talk to the Kiowa and Pawnee girls. Remained in camp.

July 18.—The chief has not arrived. Doubt somewhat the sincerity of the Spaniard who informed us he would certainly come. The Comanches visit our camp and trade with us. Monsieur Beyrick, the botanist, left us on the 7th instant. Number of sick to-day thirty-three. Three officers sick. Waited for the chief until eleven o'clock, when the advance was sounded; marched seven miles westwardly; found a Pawnee Mohaw who has been to the Toyash village, and who promises to guide us thither.

Two miles from camp; command delayed two hours waiting for the litters to come up; six litters, including Mr. Catlin's. Remarkable absence, day and night of mosquitos and flies. A chain of hills five miles from us, bearing south by west; country exceedingly beautiful; soil good; water abundant; grazing excellent. The season is a remarkably dry one, but we have suffered very little for want of good water. Our men seem somewhat discontented on account of the scarcity of game; they are very improvident; brought ten days' provisions on the 7th, with orders to make it last twenty days; have been supplied with a plenty of buffalo meat till within a day or two, yet many of them are entirely out of provisions; plenty of deer in the neighborhood, but no buffalo; out of the buffalo range to-day; our sick encumbered us so much that Colonel Dodge resolves to leave them behind.

July 19.—Marched at 8 o'clock for the Toyash villages; command reduced to 183 men; left in sick camp, covered by a breastwork of felled timber, seventy-five men; thirty-nine of these sick; Lieutenant Moore left here sick; Surgeon Findlay for duty; Lieutenant Izard in command; left our jaded horses; marched twenty-three miles southwest; two miles from camp began to ascend hills, apparently a ridge of mountains, running south by east; limestone; curious regularity of limestone upon the first hill passed over; rows of pavement resembling, at a little distance, furrows in a field; road rough, leading over rocky ravines, and close passes in the mountains; our guide seems to have chosen the most uneven and circuitous route; height of these mountains from 200 to 1,500 feet; wagons nor artillery could possibly pass these hills; halted at 3 o'clock, and encamped near a creek; a few miles before reaching our halting place for the night the face of the country changed; secondary formation gave way entirely to primitive rock; mountains of granite, almost wholly without soil; upon the side of one of them noticed a shining spot, apparently a waterfall, glistening in the sunlight; an old woodsman astonished us by informing us it was a mass of *salt*; no buffalo; our mshed horses suffered very much to-day; wild horses in abundance, and bears; many deer were seen; a few were killed; scanty allowance of provisions for our men; we march too fast to be able to hunt much on the road; game is now divided among the command with great care; marched in three columns; baggage reduced to three pack horses to each company.

July 20.—The command moved at half past 7 o'clock, west course; halted at half past 4 o'clock, thirty-seven miles; road literally of granite rock for miles; after a few miles struck high prairies, thinly

scattered with bushes; then ravines and difficult passes; immense blocks of granite piled on each other from 500 to 1,000 feet in height; many horses gave out to-day; traces of buffalo, but saw none; about the middle of the day's march the mountains became more detached; passed to-day what is called a "dog village." The prairie dog, or "marmot," is an animal somewhat larger than a squirrel, with a head like that of a dog; they live in holes in the ground, about twenty paces apart from each other; five or six miles were covered by the habitations of these little animals. We encamped five miles from the Toyash village, which is situated on a branch of Red river; soon after we had pitched our camp Lieutenant Northrop was directed to pursue and endeavor to bring to camp an Indian who was discovered on horseback; Lieutenant Northrop after some difficulty induced the Indian, who proved to be of the Toyash nation, to accompany him; he was very much alarmed; conversed readily with the Pawnee girl. We behaved kindly to this Indian; assured him of our friendly disposition, and allowed him to return to his village. The Toyash girl is now of very great service as an interpreter. The band not coming out to meet us to-day convinced us that they had either fled or had determined to make a stand and give us a fight; bayonets were fixed, and every preparation made for a conflict. Water to-day at our camp *salt*. Width of the branch of Red river about 500 feet from bank to bank; water low. Dutch, the Cherokee guide, very ill; the Kiowa girl ill also.

July 21.—The command marched at 8 o'clock for the Toyash village; proceeded a mile or two when we met about sixty Indians who had come out to meet us; shook hands with them, and moved on in company with each other; they stated that the principal chief was absent on a visit to the Pawnee Mohaw's country; passed their cornfields on our way to their town; these fields are well cultivated, neatly enclosed, and very extensive, reaching, in some instances, several miles; we saw also here melons of different kinds, squashes, &c. The Indians discovered a good deal of alarm as we approached their village; frequently halted, and begged Colonel Dodge not to fire on them; Colonel Dodge promised them safety. These Indians are chiefly naked, and are armed with bows and arrows. They have few horses, and seem altogether an unwarlike people. Before we started this morning the uncle of the Pawnee girl rode up to our camp; he embraced his relation, and shed tears of joy on meeting her. We soon reached the village, which is situated immediately under mountains of granite some 600 feet in height; in front of the village runs the river. We counted near 200 grass lodges; these are made of poles fixed firmly in the earth, fastened together at the top, and thatched substantially with prairie grass and stalks from their cornfields; many of these lodges are thirty feet high and forty feet in diameter; in the centre of the floor a shallow excavation serves as a fireplace; around the sides are comfortable berths, large enough to accommodate two persons each. We encamped on a fine position, about one mile from the village. Toyash men are less fine looking than the Comanches. Their women are prettier than the Comanche squaws; indeed, some of their girls are very pretty; naked, save a broad garment of dressed deer skin, or red cloth, worn about the middle; some of the men wear coats of red cloth, obtained from the Spaniards of Mexico. Most of our officers visited them on the day of our arrival, and were hospitably entertained. Our own provisions were almost entirely exhausted; we had met with little or no game for several days, and found most excellent fare in the dishes of corn and beans which they dress with buffalo fat; they served us thus liberally, and for dessert gave us watermelons and wild plums. Our men purchased green corn, dried horse meat and buffalo meat; we depended, during our stay with them, on their dried meat and corn, which, with vermilion and articles of clothing, knives, &c., we were able to purchase of them.

The Comanches now began to arrive.

July 22.—At the Toyash village Colonel Dodge and several of his officers met, agreeably to previous notice, the Toyash chiefs and warriors in council. Council being in order, Colonel Dodge proceeded to speak as follows: "We are the first American officers who have ever come to see the Pawnees; we meet you as friends, not as enemies, to make peace with you, to shake hands with you. The great American captain is at peace with all the white men in the world; he wishes to be at peace with all the red men in the world; we have been sent here to view this country, and to invite you to go to Washington, where the great American chief lives, to make a treaty with him, that you may learn how he wishes to send among you traders, who will bring you guns and blankets, and everything that you want. The great American chief wishes also to make peace between you and the Osages; you have been at war with the Osages; and to secure peace between you and the Cherokees, Senecas, Delawares, and Choctaws, and all other red men, that you may all meet together as friends, and not shed each other's blood, as you have done. On our way to your village we met a party of Comanches. We showed to them a white flag, which said to them, 'we wish to be friends.' Their principal men were gone to hunt; we treated their old men, women, and children, with kindness; we gave them presents; they had many horses; we could have taken their horses from them, but did not; we showed to them that we wanted to be at peace with them; they told us that you were their friends; we were glad to hear of it; we have come to your town, and found you as defenceless as the Comanches; we have treated you as we treated them; the American people show their kindness by actions, and not by words alone; we have been told that a white man was taken prisoner by you last summer, that a boy was made prisoner by you last spring; we have come now to require the boy at your hands, for we are told that he is in your town. Give us the white boy, and we will give you the Pawnee girl that we have brought with us; we wish all that has passed to be put behind us—to be forgotten; we wish to shake hands with you and be friends; you must now give me a positive and direct answer in regard to the white man who was taken last summer, and the boy who was taken last spring." (Remained in camp.)

The chief, We-ter-ra-shah-ro, replied: "I know nothing of the man who you say was taken last summer; the white boy is here."

Colonel Dodge resumed. "I wish the boy brought to me; I will then give to you the Pawnee girl; this act, together with all the information you can give concerning the man who was taken last summer, will be the best proof that you can give of the sincerity of your disposition to shake hands and be at peace with us. I cannot leave the country until we obtain possession of the boy and gain information respecting the man who was taken last summer. His name was Abby; he was taken between the Blue river and the Washita, about this time last year."

Chief.—"I know nothing of it. I believe they were Comanches who took the man." On receiving some intelligence from one of his friends, the chief continued: "I remember now; the Oways, who live south, did it."

Colonel Dodge.—"Do the Oways hunt on the grounds between the Blue and Washita rivers?"

Chief.—"They hunt there, and I have heard that they took the man Abby, and when they got near their camp they killed him."

Colonel Dodge.—"How far do the Oways live from here?"

Chief.—"They follow the buffalo as the Comanches do; they have a town." Here a pistol was accidentally fired in the council lodge, which caused much confusion. It was soon explained, however, and business proceeded. The white boy, who had been sent for, was brought in and presented to Colonel Dodge; the boy was entirely naked, about seven years of age; his name is Matthew Wright Martin.

Chief.—"I am glad to shake hands with you, with the red men that you have brought with you, the Osages, Delawares, and Cherokees; the principal chief is not here, but you are as gladly received as he would have welcomed you; the chief has gone to the country of the Pawnee O'Mohaws; he believed that you had gone that way. The father of the Toyash girl went with the chief to seek his daughter."

Colonel Dodge.—"How did the Comanches obtain the American flag I saw flying in their camp?"

Chief.—"The Pawnees from La Platte sent two flags—one for the Wacoahs, and the other to the Comanches."

Colonel Dodge.—"Do the Spaniards come here to trade with you?"

Chief.—"They do. They left us not long since, and went west."

Colonel Dodge.—"The Americans will give you better and cheaper goods than the Spaniards do. Tell me, if you know, where the ranger (Abby) was taken, and how he was killed?"

Chief.—"I have inquired, and have learned this day that the Indians who live near St. Antoine, in Mexico, captured Abby, and that they killed him on Red river."

Colonel Dodge.—"What Indians killed our Santa Fé traders?"

Chief.—"There is a roving tribe of very bad Indians called Wakinas; they range north of the country of the Arkansas." Colonel Dodge here presented the girl to her friends, whereupon they conducted her from the council.

Colonel Dodge.—"I am very much pleased at the exchange of prisoners. I hope the friends of the girl will be happy with her; she is a good girl; I wish her well. I will restore the little boy to his mother; her heart will be glad, and she will think better of the Pawnees; a bright sun has shined on us this day; I hope the Great Spirit will let it shine continually upon us. You have some Osage prisoners; the Osages have some Pawnee prisoners; we will exchange, and give you your Pawnee friends, and you shall restore the Osages to their friends. How many Osages have you?"

Chief.—"There are Osages here; they are men who were raised here, and do not wish to leave us. The Delaware woman and boy that we took died of the smallpox. A great many of the Toyash have died of smallpox."

Colonel Dodge.—"The American President will have a treaty of peace made between you all; then you will meet and exchange prisoners; this will be done when the next grass grows. The Osages who are with the Pawnees, who then wish to return to the Osages, will be able to return; and the Pawnees who are with the Osages can come back to their people."

Chief.—"We wish to have it done soon."

Colonel Dodge.—"The American President wishes to see some of each nation shake hands before him; he will give presents to those who visit him, and fix a permanent peace between their nations. Peace cannot be made with all the tribes till a large white paper be written and signed by the President and the hands of the chiefs. Will your chiefs go with me now to see the American President? I wish also to take with me some Comanche chiefs. The President will be happy to see you, and will make you, as I told you before, presents of handsome guns, coats, &c."

Much demurring among the chiefs.

Colonel Dodge.—"This is the proper time to make peace with the red men and the white men; if you do not seize this opportunity you may not have another. The bright chain of friendship can now be made bright between all the Indians and the white men."

Chief.—"We do not like to pass through the timber; it will be hard for our horses to pass through the thick timber country between us and the white men."

Colonel Dodge.—"There are roads; a big road is now being made."

Chief.—"We have met here as friends, we hope to remain so. The Great Spirit has seen us as we see now the white men, Cherokees, Osages, Delawares, and Senecas, as friends; we hope to remain so."

Colonel Dodge.—"I hope so. How came you by the negro who is here with you?"

Chief.—"This Comanche brought him; he found him on the Red river; you can take him and do as you please with him."

The council here closed.

July 23.—We-ter-ra-shah-ro, and two other principal men, met Colonel Dodge at his tent this morning, and held further talk with him. The four leaders of the bands of Indians who were with us were present at the talk, and participated therein. Colonel Dodge spoke as follows: "Toyash chiefs! I told you yesterday that I wished to show you the road that leads to the great American captain, and make you acquainted with the Indians that live on the way thither; have you thought of going with me? Our great father wished you to see the red men who live on the way, that you may be the better able to settle all difficulties with them. You shall be well treated; presents shall be made to you, and you shall be sent back in safety. Peace cannot be made unless some of you go; I am not the great captain, *he only* can make peace with you and other red men; I wish only a few of you to go with me; I wish you to go willingly and as friends; had I chosen to force you to go it would have been easy for me to do so; you see I do not wish to force you." After a good deal of consultation, one of the chiefs (a Wacoah) consented to go. Here the following interesting ceremony took place: The boy whom we recovered yesterday is the son of the late Judge Martin, of Arkansas, who was killed by a party of Indians some weeks since; the son was with his father on a hunting excursion, and being parted from him—his death, however, he did not witness, and is now in ignorance of it—the boy relates that, after being parted from his father, the Indians who had taken him were disposed, save one, to kill him; this one shielded him and took care of him in sickness. Colonel Dodge, as a reward for this noble kindness, gave him a rifle, and at the same time caused the little boy to present to him, with his own hand, a pistol. Colonel Dodge now assured the chiefs that they should receive further presents if they would go with him to his country; that he regretted he had nothing of value with him, but begged them to accept some rifles and pistols, which they did with *much evident satisfaction*. We-ter-ra-shah-ro, and the other chiefs with him, here consulted some time together on the subject of visiting the President. We-ter-ra-shah-ro spoke: "We have been at war with the nations which we see around us to-day; we wish now to make peace with them."

Colonel Dodge answered him: "It is the wish of the President that you make peace with them; that you present to each other clean hands; it is to effect this that I wish you to go with me."

The chief resumed: "We wish much to make peace with the Osages; we have been long at war with them; we wish to see the lands of the Creeks and Cherokees also, to shake hands with all. We want now to hear those Indians who came with you speak to us." The chief men of the four parties now spoke as follows:

Dutch, the Cherokee.—"I am now going to tell you what the chief of the Cherokees bade me say to you if we met as friends. He says to you his people wish to come to you without fear, and that you should visit them without fear. My heart is glad that we are all willing to be friends; a long time ago it was so, there was no war between us. I am rejoiced, and my people will be rejoiced, when they hear that it may be so again. Look at me, you see I speak the truth; I have nothing more to say."

Beattie, leader of the Osage band. "We came for peace; I have brought a few Osages, who were not afraid to come among you, with hearts inclined for peace. We look on our friend (Colonel Dodge) as our father; he is a true father to us all. I hope you will believe all that he says to you, and trust that he will prove a father to you. We wish you to visit our people, to see how we live since the white men have been our friends. They have made us happy; they will make you happy. You should go with our father as he wishes; you must then come and see the Osages. I have said all that I can say."

Monpisha, an Osage youth, spoke to the Toyash men. "We shake hands with pleasure. I am nothing but a boy; my father was an Osage chief. We wish to be your brothers—dogs fight; we wish to be peaceable men, and friends. Our good father has made, in coming to you, a great road; we hope it will never be stained with blood. My father told me he was once a wild Indian; that white men taught him to be happy, instructed him how to build houses, raise cattle, and live like white men. I was sent to the white man's school, (missionary school;) was taught to read and write. This will be extended to you if you make peace with white men. Your buffalo will be gone in a few years. Your great father, the President, will give you cattle, and teach you how to live without buffalo."

George Bullett (Pon-da-gue-se) spoke. "When I tell the Delawares that we are friends, and can now hunt without warring together, they will be happy; our children will hereafter be happy, and not fear each other; we will no more fear the prairie Indian, and you will not be afraid of us."

Colonel Dodge resumed. "I am glad to hear what our friends say to you. I must say to you now that I am very sorry that a few of our horses got into your cornfield last night; I shall pay you for the damage done; it is not my wish to disturb your property in any manner. White men will always be just to you. I must also repeat that I regretted that the pistol was accidentally fired in the council lodge yesterday; I did not wish to alarm your people; I was pleased with the coolness of your chief; he was not alarmed. I wish you now to consider if some of you will go with me."

The chiefs signified that they would go home and decide who should accompany the command on its march back, and accordingly left our camp.

Many Comanches arrived to-day; amongst them the principal chief, Ta-we-que-nah, and two other chiefs. Colonel Dodge held the following talk with them in his tent:

"The great American captain has sent me to view this country, and to offer the hand of friendship to all the red men who are here; he wishes to see you all at peace with each other; he desires you to come and see him, that he may fix a permanent peace with your tribes; he will make you presents, and he will send traders among you who will serve you with a great many things that you want to make you happy. The President, who is a good father to you, wishes to see you at peace with the Osages, Cherokees, Delawares, and all red men. We have endeavored to give you evidence of our friendship; we did so when we passed your camp; you were not at home; your women and children were defenceless; we treated them kindly; we confided in you, too. Our sick men we left behind near your camp."

Ta-we-que-nah replied. "I passed a night in your camp with your sick men; they treated us with kindness."

Colonel Dodge.—"You say that the Indians over Red river are your enemies; they kill you when you meet; these are Mexican Indians, and do not make treaties with our great father, the President; but he will protect you when you make peace with the Osages and other tribes that have been at war against you. The flag that you have come to you from the great father at Washington. The Pawnee O'Mohaws have such a flag, and all other red men who are our friends; whenever you show it you will be known as friends. I was glad to see the flag over your camp."

The chief spoke. "I wish to be at peace with you; there are many bands of Comanches; I shall visit them all this year, and will say to them what you have said to me; they will all be glad to make peace with you. I am an old man now, but never since I was a boy did I kill one of your people. You ask me who killed the ranger, Abby; I can tell you, for I remember when this white man was taken; the Texas Comanches took this white man, and carried him over the Red river, and there killed him."
